

Michael Tischler, DDS, FAGD

Dr. Michael Tischler graduated from the Georgetown University School of Dentistry in 1989 and is in private practice in Woodstock, NY.

In 2007 "The Implant Center" at Tischler Dental was opened. With an in-office CAT Scan machine, video capture for surgery, a separate surgical suite, and a lecture room, Tischler Dental is ideally set up to teach Implant Dentistry and Bone Grafting principles. As a general dentist, Dr. Tischler conveys the surgical and prosthetic principles to his colleagues in a very approachable way.

Dr. Tischler is a diplomate of the American Board of Oral Implantology/Implant Dentistry. He is also a New York University College of Dentistry Research Associate, Diplomat and Fellow of The International Congress of Oral Implantologists, Fellow of The Academy of General Dentistry, Fellow of The American Academy of Implant Dentistry, Fellow of The Misch International Implant Institute, Associate Fellow of The American Academy Of Implant Dentistry, and an Associate Member of The American Academy of Periodontology.

Dr. Tischler has been listed by "Dentistry Today," as a leader in continuing education since 2003. He is also a contributing editor for this widely read dental journal. Dr. Tischler has offered many in-office courses over the years and has spoken for The Academy Of General Dentistry, The New York County Dental Society, The Toronto Implant Study Club, The Third District Dental Society, The Ninth District Dental Society, The Greater Long Island Dental Meeting, The Big Apple Dental Meeting and The American Academy of Implant Dentistry and is an educator for Biohorizons Implants Inc.

Dr. Tischler has been published in The New York State Dental Journal, Dentistry Today, Contemporary Esthetics and Restorative Practice, and the International Magazine Of Implant Dentistry.

Dental Implants and Extraction Site Grafting A Comprehensive Review for General Dentists

November 7, 2007 - Full Day Course

The Implant Center at Tischler Dental was built in 2007 and is a world class teaching center for dental implants and bone grafting. A separate surgical suite, video feed, in-office CAT Scan machine and lecture room create an ideal teaching environment.

Through observing surgical set up, armamentarium, sterile protocol and the latest technologies, the course attendee benefits in many ways over a traditional lecture venue. Informed consent protocols, prosthetic and surgical parts organization, and operative checklists will be covered.

This is an opportunity to not only learn the principles of these important disciplines through case presentation and theory, but to see first hand how an implant practice functions on a daily basis.

A hands on component utilizing models will be included, as will manufacturers demonstration of Platelet Rich Plasma preparation and Piezo Electric Handpiece use. A course handout will be included.

Course Topics

Morning implant surgical and prosthetics outline

- Rationalization for dental implants as a treatment option
- Treatment planning for dental implants
- Bone Grafting related to dental implants
- Occlusion related to dental implants
- Cone beam CAT Scan demo and theory
- Dental Implants in The esthetic Zone
Implant design considerations
- Prosthetic steps for fixed and removable implants
- Soft tissue considerations and esthetics with dental implants

Afternoon bone grafting outline

- The clinical applications and rationale of extraction site grafting
- Atrumatic extraction techniques
- Treatment planning extraction site grafts
- Complications of extraction site grafting and their management
- Bone physiology/ cellular sequence of grafting
- Terminology and histology of bone science
- The 8 keys to bone grafting
- Choosing the appropriate graft materials
- Suturing principles
- Membrane principles and review of available materials
- Platelet rich plasma theory and demonstration

Course Objectives

The objective of this course is for the attendee to gain an understanding of clinical and practice management essentials needed to successfully provide implantology and bone grafting in their dental practice. Through observation of an implant based practice, the clinical aspects can be best conveyed.
