

February is Pet Dental Month

Pet Dental Care: Quick and Easy

Oral disease is the most frequently diagnosed health problem for pets. By the age of 3, 80% of dogs and 70% of cats show signs of dental disease, which can lead to the more serious problems of heart, lung and kidney disease.

Proper dental care can add an additional 2 years to your pet's life and greatly enhances the overall quality of life! Bad breath is an indication that Fluffy or Brutus has oral health problems.

February is National Pet Dental Health Month and the Country Doctor & Geneva Vet Clinic is stressing the importance of pet dental care to owners and pets lovers alike. The key to pets' oral health is professional veterinary dental care and good care at home. But few pets receive both and most receive neither.

Pet owners can change that today!

Because we believe dental care is so vital to pets' overall health, the Country Doctor Vet Clinic and Geneva Veterinary Clinic is offering a **FREE** dental screening to any dog or cat from February 1st. thru February 29th. One of our medical team will assess whether a pet is suffering from dental disease and advise their owner on what they could do to cure their pet of dental disease. During our Dental Special, pets will receive a discount if they book a teeth cleaning during the month of February. Prior to the teeth cleaning pets will receive a physical exam from the doctor (if we have not seen your pet within 6 months) and pre-surgery blood work.

What do pet owners have to lose? (Nothing except stinky pet breath!)

Call the Country Doctor today to schedule your free exam 440-576-9440 or the Geneva Veterinary Clinic at 440-361-4363. Hours for exams are Wednesdays-Saturdays 8:00-9:00am, Wednesday and Thursday afternoons from 1-2pm.
