CONTINUOUS
MONITORING

MEASURING
SEAM
INTEGRITY

Seamvision is a comprehensive inspection system designed to provide another level of measuring seam integrity. It is a continuous analysis for standard and automated solutions that require non-contact imaging and temperature measurements.

Features & Benefits

Visual and audible seam monitoring alarms to alert operator

Simple, easy to use touch screen for setting welding parameters

Consistent data output into CSV file thru USB for quality reporting and records-keeping

Inspection of seams using hot air or hot wedge to meet any product demand
