As UK based, designers and manufacturers, Street Design can manufacture and supply the Stratum, weathering steel, modular planters, to suit your specific requirements.

The modular design, allows you complete flexibility, to create long, linear planters, large units or smaller individual containers.

Choose from a range of accessories to ensure that the Stratum planters are manufactured to suit your specific scheme.

Stratum planters are suitable for:
- modular planters
- roof garden planters
- tree planters
- moveable planters

1000x1000x800mm high Stratum, aluminium planter, polyester powder coated RAL 7044, light grey, with galvanised plinth base
**STRATUM planter**

**PRODUCT DETAILS**

**General**

The Stratum modular external planter, is a versatile, multi-use, all metal planter, available from a choice of modules to suit your scheme and budget.

Planters up to 2.8 x 2.8m plan size will be delivered fully assembled ready for planting.

Larger planters will be manufactured in sections and delivered for assembly on site.

Shaped planters can be manufactured and supplied including:- square, rectangular, L shaped, U shaped and Z shaped planters.

A number of planter accessories are available to ensure that the Stratum planter is suitable for your specific scheme.

**Construction**

The Stratum, modular metal planter, is constructed by bolting an aluminium planter body onto a fully welded mild steel base frame.

The planter modules are manufactured in sections for bolting together to create large, long and shaped planters.

The internal base is constructed using 75x50x6mm mild steel angle. The module is strengthened using 45x10mm cross brace straps. Treated plywood sheeting is laid onto the base. Planter feet are fitted to the underside of the base frame, to ensure that the load is safely transferred to the ground.

When fully constructed, the inside of the planter is fully lined with a geotextile lining, that allows water to drain through whilst retaining the soil fines.

**Standard leg types available**

- **Base with 50x50mm mild steel SHS legs**
- **Plinth base with 100x100x5mm footplate**

**Optional leg type (extra cost option)**

M30 adjustable legs are screw fitted to bolt on adjustable foot plates, that are bolted to the underside of the galvanised mild steel base.

#### Timber policy

All treated softwood planters are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC). All iroko hardwood planters are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC).

#### Construction

All Street Design products are designed and manufactured using only quality, durable materials, construction details and fixings, to provide a long-lasting, durable life expectancy.

#### Assembly

Planters up to 2.8 x 2.8m will be delivered to site fully assembled for off loading and positioning on site. Planters larger than 2.8m will be supplied in sections for bolting together on site.

#### Materials

4mm thick aluminium sheet. Mild steel angle, flats and hollow section. FSC treated Eucalyptus plywood.

All mild steel fixings will be M12 size and have a bright zinc plated finish.

Planters will be fitted with a geotextile filter fabric lining, which allows the water to drain through the planter, while retaining the fill material.

#### Standard finish

The aluminium planter body will have a polyester powder coated finish. The mild steel base frame, legs and cross brace straps will have a galvanised finish.
Stratum modular planters can be manufactured and supplied to include a range of optional accessories. Planters can incorporate; adjustable feet, tree anchor fittings, base skirtings, watering systems, bench seating, inner tower planters, LED lighting, pergolas and trellis panels.

Adjustable feet
Stratum planters can be manufactured with optional adjustable feet to allow the planter to be height adjusted to ensure that the top of the planter is level. The adjustable feet, allow the planter to be levelled after relocation. See separate page for Adjustable Feet details.

Watering system
Stratum planters can be supplied with a choice of 2 watering systems. Street Design can supply either a reservoir system, with filler pipe or the Mona, subterranean tank system. See separate page for Watering System details.

LED lighting
Both white and coloured LED lighting can be included in the manufacture of the Stratum planter. Lighting can be incorporated into the sides or the base of the planter. It can be utilised to illuminate the planting or the area around the planter. See separate page for LED Lighting details.

Tree anchor fittings
Stratum planters can be fitted with galvanised mild steel tree anchor points. They can be fitted at the bottom of the planter to help support the root ball and they can be fitted at the top of the planter to help provide support for the tree. The tree anchors are manufactured using 25x5mm mild steel flat. They have two punched slots and are fitted to the projecting bolt ends on the inside of the planter. The tree anchors are hot dip galvanised.

Pergola structures and trellis panels
Pergola structures and trellis panels can be integrated into the planter construction. Pergolas and trellis allow high level planting and create shading for seating areas.

Bench seating
Integral planter benches, with or without armrests, can be supplied with Stratum planters. As standard 2 bench designs are available. Other designs can be included upon request. The Bexley bench consists of 4 no. 70x45mm timber slats and the Henley bench has 2 no. 145x45mm wide bench slats. The timber slatted benches bolt onto galvanised mild steel brackets, attached to the planter sides. Benches can be fitted to 1, 2, 3 or 4 sides to suit your requirements. The choice of material and finish is the same as for the planter. As standard the brackets will have a galvanised finish. As an optional extra, they can be polyester powder coated.

Watering System 1 - Street Design reservoir system

The Street Design watering accessory is a reservoir system with hydroleca sacks, that maximises the available water.

The system ensures the optimum use of the water and nutrients, delivering the maximum quantity directly to the roots of the plants, resulting in improved root development and optimal plant growth.

General

The system consists of a 300 micron thick black polythene liner, hydroleca (pulverised ash granules) sacks and a rigid plastic filler pipe.

The system delivers water directly to the roots via 50mm diameter, rigid plastic pipe, eliminating water wastage. This encourages deep root growth, improving long term drought resistance. The high level filler pipe provides an easy access point for watering and soluble fertiliser application.

Installation

Planters are supplied with the Water System 1 already installed.

Ensure the hydroleca sacks are in the correct position. They will move during transportation. Check that all the plastic pipe connections are properly fitted. The planter is ready for drainage material, filling and planting.

Mona watering system

Factory fitted into planter / tree container

The Mona Plant System (MPS) is an advanced, well proven and easy to use subterranean irrigation system. It is the cost effective and environmentally friendly solution for both interior and exterior landscaping.

The Mona Plant System ensures that the water and nutrients are delivered in the right quantity to the root of the plants, resulting in improved root development and optimal plant growth.

General

The system consists of storage tanks, flexible linking pipes and a flexible filler pipe with filler pipe cap. The system delivers water directly to the roots via capillary action, eliminating water wastage. This encourages deep root growth, improving long term drought resistance. The cap and lid provides an easy access point for watering and soluble fertiliser application.

Factory installation

All necessary water tanks, pipes, end caps and air pipes with level indicator, are factory fitted into the planters / tree containers, prior to delivery.

Filling planters

Ensure that the distance between the top of the link tank and the lowest part of the root does not exceed 150mm.

ADJUSTABLE FEET

General details

As an extra cost option, Street Design planters can be supplied with adjustable feet. They allow the planter to be levelled, before filling and planting. Adjustable feet are particularly useful if the planters are likely to be relocated to a new position. The adjustable foot screw fits into a hex nut, located on the underside of the planter base.

Specification

The adjustable foot comprises of a M30 Ø threaded bar, with spherical end section, press fitted into a black reinforced polyamide base. The swivel base can tilt through 360° to accommodate sloping ground levels. The threaded bar is BZP (bright zinc plated) treated.

Fitting and adjustment

The M30 adjustable foot with swivel base, is screwed into adjustable foot mounting plate. The mild steel mounting plate with adjustable foot housing, is fixed to the underside of the planter base. A M30 hex full nut is welded to the underside of the mounting plate. The adjustable foot is adjusted with a 26mm wrench.

Base diameter

M30 adjustable foot with swivel base. The base diameter is 122mm.

Swivel base

The swivel base can adjust to allow for sloping ground with a fall of up to 1 in 2.06 (26°).

Bolt down base

For extra security, it is possible to drill and bolt through the base of the adjustable feet.
Stratum planters can be manufactured and supplied to include plinth, side and top lighting, all specified to illuminate the planter or the surrounding paving.

Plant, up lighting and down lighting can be used to create a dramatic planting scheme by introducing colours or feature spot lighting. We have created seven types of basic lighting to enhance your scheme and the planting. The seven types of lighting are shown below. The lighting types can be specified individually or they can be grouped together to create a range of lighting effects.

In its basic form, the lighting is available as cool white, warm white, blue, green or red LED units. More complex lighting can be supplied, including twilight switches, PIR sensors, timers, infrared, ultraviolet and royal blue emitters, PWM dimmers, RGB, UPS, DMX and remote control units.

Overview
Street Design is pleased to announce new designs of wood and metal planters featuring integrated lighting as standard. These designs make full use of safe, eco-friendly, low-power, low-voltage, high-efficiency LED lighting with a broad choice of placements, brightness and colours.

Our LED lighting units can handle all of the tasks formerly undertaken by tungsten, halide and fluorescent lamps, and out-perform them in every department. They are extremely flexible - we can supply almost any configuration of lighting to a client’s specification using our standard lighting units in these purpose-designed planters.

The lighting units can be powered by either a low voltage DC supply or mains electricity. The choice of light levels and power units is also broad. Our standard power supply pumps out 12 Volts at 4 Amps, in LED terms enough for a very bright planter. The entire range is from 1 Watt to 1,000 Watts.

This page outlines the different types of lighting available and shows examples of the uses to which the lighting units can be put.

Plinth lighting
Plinth lighting is available in warm and cool white, standard LED colours, and RGB strips that allow almost any colour to be mixed. Plinth lighting can also be specified for one or more sides (or arcs) of a planter and at any power level between 1 Watt per metre and 40 Watts per metre.

Our standard plinth light is warm white and operates at 6 Watts per metre and provides a noticeable light up to one metre from the edge of the planter (though this depends on ambient lighting levels and the reflectivity of the ground surface).

Down Lighting
Down Lighting in this context is about mounting a lamp with a lens and reflector above the planting area to provide top-down illumination. The reflectors come in different shapes and sizes to match the light distribution to the shape of the planter. The proximity of the light source and the use of an opaque reflector minimises both the power requirements and the unwanted, upward, light pollution.

Up Lighting
Spotlights fitted within the planter can be angled up to illuminate large plants, bushes and trees several metres above the planter surface. LED emitters rated at 1, 3 or 5 Watts are equipped with 5, 15, 25 or 45 degree collimating lenses to send a narrow beam of white or coloured light to illuminate the chosen feature high above the planter. The layout of the planting can conceal the light sources to enhance the effect.

Side lighting
Side lighting is offered as feature, decorative lighting from cut-outs in the horizontal timber slats. Low powered LED ribbons provide a point of interest on these planters. These lamps are very noticeable even under extremely bright conditions, and are quite dazzling at night.

Plant lighting
The plant lighting array is positioned down at planting level. Four LED lighting battens are fixed to the inside edges at the top of the planter. The lights are angled up and illuminate the underside of the flora, a striking and unusual effect. Fortunately, the plants don’t seem to mind.
The Stratum sheet metal planter, comprises of a fully welded aluminium planter body bolted onto a mild steel base frame.

Standard finishes

Aluminium standard finish
As standard, the aluminium planter body will be supplied with a black, satin gloss level polyester powder coated finish. They can be powder coated to any RAL colour depending on product quantity and stock levels of powder colours. Depending on stock levels the powders are available in 3 gloss levels; gloss, satin and matt.

Mild steel standard finish
As standard, the mild steel base frames will be supplied with a hot dip galvanised finish.

Optional finishes (at extra cost)

Aluminium optional finish
As an extra cost option, the aluminium planter body can be supplied with polyester powder coated finish to any RAL colour. Depending on product quantity and stock levels of powders, the colours are available in 3 gloss levels; gloss, satin and matt.

Mild steel base optional finish
As an extra cost option, the mild steel base frame can be polyester powder coated after galvanising.

Stratum 1000x1000x800mm high aluminium planter, shown here with galvanised mild steel base
## STRATUM planter

### MATERIAL SPECIFICATION

#### Standard planter

- **Aluminium planter body**
  - 4mm thick aluminium sheet.

- **Base frame**
  - 75x50x6mm mild steel angle.

- **Internal cross brace straps**
  - 45x10mm mild steel flat.

- **Fixing bolts**
  - M12 x 30mm hex head bolts, bright zinc plated.

- **Base frame legs**
  - 50x50x3mm mild steel SHS.

- **Leg baseplate**
  - 100x100mm plate x 5mm thick

- **Base floor**
  - 18mm FSC Eucalyptus treated plywood.

- **Internal lining**
  - Geotextile filter fabric membrane.

#### Optional planter accessories

- **Adjustable feet**
  - M30 adjustable feet with swivel base. See Adjustible Foot page for full details.

- **Tree anchors**
  - 25x5mm mild steel flat, hot dip galvanised.

- **Watering system**
  - Choose either the Street Design reservoir system or the Mona tank system. See Watering System page for full details.

- **Planter benches**
  - Stratum planters can be supplied with integral planter benches in a variety of materials. The bench slats can be supplied in FSC treated European redwood or iroko hardwood, mild steel or stainless steel. The slats will be bolted to either hot dip galvanised mild steel or stainless steel bench brackets.

- **Base skirting**
  - 12mm thick Marine grade plywood boards, screw fixed to brackets welded to the underside of the planter frame.

- **Optional planter accessories continued**

- **Moveable planters**
  - Stratum planters are manufactured with an integral mild steel frame allowing them to be moved when planted.

- **Pergola structures**
  - Pergola structures can be manufactured as an integral part of the planter construction. The steel frame can be extended to carry the upper horizontal 145x45mm section timber bearers and cross bearers.

- **Trellis panels**
  - Trellis panels can be manufactured as an integral part of the planter construction. The steel frame can be extended to carry the horizontal and vertical trellis timber slats.

- **Inner tower planters**
  - Stratum planters can be supplied with co-ordinating inner tower planters to create feature planting or tiered planting.

- **LED lighting**
  - The lighting is available as cool white, warm white, blue, green or red LED units. More complex lighting can be supplied, including twilight switches, PIR sensors, timers, infrared, ultraviolet and royal blue emitters, PWM dimmers, RGB, UPS, DMX and remote control units.

- **Planter finish**
  - Stratum, aluminium planters will have a polyester powder coated finish.

#### General specification

- **Construction**
  - All Street Design products are designed and manufactured using only quality, durable materials, construction details and fixings, to provide a long-lasting, durable life expectancy.

- **Assembly**
  - Stratum planters up to 2.8 x 2.8m will be delivered to site fully assembled for off loading and positioning on site. Planters larger than 2.8m will be supplied in sections for bolting together on site.

- **Timber policy**
  - All treated softwood products are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC). All iroko hardwood products are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC).

#### Materials

- **Hardwood products**
  - Construction will allow for a life expectancy considerably longer than this.

- **Timber policy**
  - All treated softwood products are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC). All iroko hardwood products are manufactured using materials obtained from growers who operate under the Forest Stewardship Council (FSC).

### Planter bench finishes

- **The FSC treated softwood and iroko hardwood bench slats will be left natural to drain through the planter, while retaining the fill material.**

- **Planter benches**
  - Stratum planters up to 2.8 x 2.8m will be delivered to site fully assembled for off loading and positioning on site. Planters larger than 2.8m will be supplied in sections for bolting together on site.

### Planter finish

- **Aluminium planters**
  - Stratum, aluminium planters will have a polyester powder coated finish.

- **Planter bench finishes**
  - The FSC treated softwood and iroko hardwood bench slats will be left natural to reduce the need for re-staining and help reduce maintenance costs. If required, timber bench slats can be supplied with a stained finish using 3 coats of quick drying water based wood stain, to the colour of your choice. Mild steel planter benches will be left with a galvanised finish only. If required, after hot dip galvanising, the mild steel components can be polyester powder coated, to the colour of your choice. The galvanised parts are prepped, treated and sprayed with the polyester powder, before being baked in an oven.

- **Stainless steel planter benches**
  - Will have a dull polished finish.

CARE & MAINTENANCE

Maintaining the standard mild steel finish

Hot dip galvanised mild steel is a very durable and hard wearing finish. Dirt can be washed off with warm water and a mild detergent. Always use clean water and cleaning cloths to avoid surface contamination. After cleaning, any severe marks can be over painted with a cold galvanised (zinc rich) aerosol spray.

Maintaining the optional mild steel finish

Polyester powder coated finishes should be washed down with clean warm water and a mild detergent. Minor touching up can be done with an aerosol to match the original powder coated colour. Details can be obtained from Street Design Limited. More severe damage can be repaired by sanding down, by manual or mechanical means, beyond the damaged area, sufficiently far as to ensure that any step in the powder coated finish is removed. This will ensure that after re-finishing the repair will be difficult to detect.

General

All Stratum planter products are manufactured using quality materials and finishes. The base frames will be fully welded mild steel and will be hot dip galvanised after fabrication. The aluminium planter body will be supplied with a polyester powder coated finish. All products require a varied amount of maintenance, depending on the environment, usage and weather conditions. Generally, polyester powder coated aluminium will only require cleaning. In time, the optional powder coated mild steel will require re-coating.

Maintaining the standard polyester powder coated aluminium finish

The polyester powder coated aluminium should be washed down with clean, warm water with a mild detergent. Minor touching up can be done with an aerosol to match the original powder coated colour. Details can be obtained from Street Design Limited. More severe damage can be repaired by sanding down, by manual or mechanical means, beyond the damaged area, sufficiently far as to ensure that any step in the powder coated finish is removed. This will ensure that after re-finishing the repair will be difficult to detect.
