

# TIPH GLOBAL GRANT PROGRAM AWARDEES

In 2008, the **Association of Schools and Programs of Public Health (ASPPH)** launched the social media campaign **This Is Public Health® (TIPH)** to raise awareness about the field of public health and the range of professions that are encompassed within the field. Over time, this campaign has gained momentum as a platform for educating students and the public and recruiting new students to study public health. In 2019, ASPPH partnered with the Association of Schools of Public Health in the European Region (ASPHER) to launch a pilot project focused on enhancing the visibility of public health across Europe: TIPH Europe. The TIPH Europe project produced innovative educational campaigns and resources, as well as many just-in-time offerings in response to the COVID-19 pandemic.

Building on the success of TIPH Europe, ASPPH is expanding this effort under the auspices of the **Global Network for Academic Public Health** (Global Network),

**GLOBAL NETWORK**  
FOR ACADEMIC PUBLIC HEALTH

with the new TIPH Global campaign. The goal of the Global Network, launched in 2020 by six regional associations that represent schools and programs of public health around the world, is to enhance academic public health worldwide through mutual learning and collaborations. The COVID-19 pandemic has dramatically increased awareness of the underlying issues that affect the public's health and the need to work together as a global community to combat public health threats. TIPH Global recognizes the importance of global collaboration and local action to protect the health of the public.

The Global Network, with the support of Dr. Richard and Mrs. Linda Riegelman, is pleased to announce the 20 awardees for the first TIPH Global Grant Program cohort. These institutions participated in a competitive review process and were selected to represent TIPH, their regional association, and the Global Network in this cohort. The 20 awardee institutions represent 18 countries from around the world and their projects focus on a range of public health issues from antibiotic resistance to mental health to water and sanitation hygiene. In addition to the awarded project, each institution has nominated a student to participate in the new TIPH Global Ambassador program. The Global Ambassadors will represent their institutions and promote public health in their regions and globally.

It is a great honor to announce the following TIPH Global Grant Program Awardees and Global Ambassadors, listed by their regional association affiliation. You can follow their projects on the websites and social media accounts listed and look for a full showcase of their year-long projects in 2022. Congratulations to all of the TIPH Global Grant Program Awardees!

## School of Public Health, University of Chile

### Effective handwashing and its determinants: advocacy for a neglected essential strategy, even in XXI century!

Handwashing has demonstrated its efficacy at controlling infectious diseases, reducing up to 23-48% of diarrheal diseases and 21-23% in respiratory infections. In the COVID-19 pandemic, this practice has been one of the most important. A better handwashing performance is mediated by individual factors (risk knowledge, psychological trade-offs, gender, income and education) and institutional factors (access to water). Our project aims contribute to visualize the importance of handwashing and its determinants (individual and institutional factors) developing an advocacy initiative, by a coalition aligned in personal and institutional vision and mission.

### Beyond Public Health - An On-going Journey of TMU

For the community and the general public, the Student Service Group of Epidemiological Investigation will go to the local remote areas and make efforts on communities to prevent disease and promote health and wellbeing. With resources from the government and private sectors, the students will also be involved in the community health center for senior services. Also, we aim to increase the understanding and awareness of public health for high school and elementary school students by sharing the topic of "public health," "health education" and "health promotion," etc. Moreover, through the project, public health is taken root in the youth.

## College of Public Health, University of the Philippines Manila (UP CPH)

### Infodemic management solutions to fight the COVID-19 pandemic and promote vaccination

Vaccine hesitancy threatens not only the success of the COVID-19 vaccination programs, but the existing immunization programs of all health systems. The overwhelming amount of information coupled with misinformation, or 'infodemic,' contributes to vaccine hesitancy. This pandemic is the first in the era of social media platforms, which enables the spread of unreliable information. UP CPH with its comprehensive public health network as the designated Southeast Asian Ministers of Education - Tropical Medicine and Public Health Regional Center for Public Health will collaborate with public health partners and local health teams to develop infodemic management solutions supportive of local COVID-19 vaccination Programs.

### Frontliners against cervical cancer - promoting self-care interventions for sexual and reproductive health and rights (SRHR) among frontliners

No woman should ever die of cervical cancer, a preventable and treatable disease. The World Health Organization (WHO) made a call for an 'all-government and all-society' three-pillared approach (vaccination, screening, treatment) towards the global elimination of cervical cancer. Self-sampling for human papillomavirus (HPV) is an evidence-based screening test that can empower communities towards the elimination of cervical cancer. It is also promoted by WHO as a self-care intervention. Program ROSE which encompasses self-sampling, HPV testing and the use of digital e-platform adopted by the 'Frontliners Uniting Against Cervical Cancer' campaign showcases a unique self-care program during the COVID19 era.

## The Airlangga Centre for Health Policy Research Group, Faculty of Public Health, Universitas Airlangga, Indonesia

Science communication campaign for immunizing the public against the misinformation of the COVID-19 vaccination

UNIVERSITAS  
AIRLANGGA

Indonesia has started mass COVID-19 vaccination with some challenges in educating the layperson on this vaccine's safety and usefulness. This project aims to increase the layperson's knowledge and awareness of the Coronavirus vaccination by empowering public health students as a science communicator. Public health students will be assisted in translating any existing robust scientific papers related to the Coronavirus vaccination into accessible language for laypersons, as the campaign content. Multiple popular social media channels with structured and repetitive content exposures will be conducted.

## West China School of Public Health, Sichuan University

Raising middle and high school students' awareness towards public health-related issues under the context of COVID-19.

It is beyond controversy that the outbreak of COVID-19 has created a changing climate for global health, for which the significance of addressing public health-related issues has become unprecedentedly critical in a worldwide range. Under such circumstances, this project is intended for raising the awareness towards public health-related issues among middle school and high school students as a strategy for boosting their interests and enthusiasm for public health, thus motivating them to dedicate themselves to finding solutions for public health-related issues as their future career pursuits.

### Training of Master of Ceremonies (MCs) to Raise Awareness about Public Health Issues, Education and Career Opportunities in Nigeria

**BABCOCK**  
UNIVERSITY  
ILISHAN - REMO, NIGERIA.

In Nigeria, Masters of Ceremonies (MCs) reach a wide range of people in rural and urban communities during organized festivals/festivities/celebrations such as traditional African weddings, New Yam Festivals, burial/funeral programs, etc. They have the capacity to convey critical information humorously, using powerful local idioms and proverbs in English or local languages. They are usually well-respected and therefore can be trained to raise awareness about public health issues, education and career opportunities, particularly in local communities. This project aims at training 20 master of ceremonies (comperes) to raise awareness about public health issues, education and career opportunities in Nigeria.

## Division of Health Systems and Public Health, Department of Global Health, Faculty of Medicine and Health Sciences, Stellenbosch University

### Futureproofing Public Health – This is Public Health

This collaborative project builds on the collective strengths of the Futureproofing Public Health and This is Public Health initiatives. Through engagement with a wide group of stakeholders this project will harness social media and online platforms to promote discussion of key public health issues and raise the profile of the discipline. Engagement will be with key local and regional stakeholders. A series of inter-disciplinary seminars will be hosted as well as a joint Futureproofing-This is Public Health mini-conference.

## **Tropical Institute of Community Health and Development Digital Reach to Adolescents & Young Adults for SRH (DIRAYA-SRH) in Western Kenya**

Mobile digital media and social networking are potential vehicles for public health interventions especially among adolescents and young people aged 10 to 24 years. The project will use mobile phones and internet connectivity, social and other digital media to reach approximately 4 million adolescents and young people with Sexual and Reproductive Health (SRH) information. The project aims to increase their knowledge and positively influence their attitudes and practice of sexual and reproductive health needs and rights. We will conduct formative, process and outcome evaluations to determine changes in attitude, behaviour and knowledge attributable to the intervention.

## **University of Namibia, Faculty of Health Sciences, School of Public Health Intervening in the scourge of teenage pregnancies in Namibia through a dynamic and innovative educational intervention**

The project will address problem of teenage pregnancies in Namibia through a dynamic and innovative educational intervention. Teenage pregnancy is a well-researched phenomenon in Namibia. The highest prevalence being in Kavango Region (Indongo, 2012). Indongo recommended the adoption of “Innovative educational programmes in the form of drama/movie series targeting teenagers” in the area of advocacy and information sharing. The advocacy will be more on responsible sexual behaviour among men of all age groups, and positive role-modeling towards rational SRH within male circles. Social media and live performing arts will be used to convey the message in the fight against teenage pregnancy.

## Instituto de Saúde Pública da Universidade do Porto ALERGIA@PT

Overall, we aim to inspire people with allergies to make a positive change in their life by means of a social media campaign. Specifically, we intend to develop an evidence based public health allergy campaign that will focus on i) endorse health, not allergy, ii) strengthen tolerance, iii) adopt a new attitude to allergy: avoid allergens only if mandatory, iv) recognize and treat severe allergies early: prevent exacerbations, v) improve indoor air quality: stop smoking. To achieve these goals we will create, deliver and curate an engaging social content: the Alergia@PT media-based platform.

### Public Health in Daily Life: Creating the Future Health Here and Now

LITHUANIAN UNIVERSITY  
OF HEALTH SCIENCES

The relevance of the public health (PH) profession and demand for professionals is increasing. However, popularity of PH profession has decreased in Lithuania. Keeping in mind low popularity of PH profession, we project *#thisispublichealth* campaign as means to increase prominence and popularity of the profession among Lithuanian citizens with a special focus on youth. The project invites to recognize and implement PH activities in daily life. We see project activities as micro-interventions aimed to help population of all ages to recognize and reflect on everyday choices and activities as relevant not only to personal, but to global PH as well.

## The Institute of Public Health and Professional Health of Karaganda Medical University

Capacity building in the water, sanitation and hygiene (WASH) sector in schools among the students of 11-18 years old for an effective response to the COVID-19 pandemic

KARAGANDA  
MEDICAL  
UNIVERSITY

The goal of this project is to build capacity in the WASH sector in schools among the students of 11-18 years old to transfer knowledge and develop hygiene skills, change students' attitudes towards safe water and sanitation in order to create a safe environment during the COVID-19. This project will regard the capacity building in WASH as a key element in preventing further spread and control of COVID-19 in schools. Raising students' awareness of hand washing protocols as directed by health experts, transferring knowledge and developing skills in WASH will lead to a change in their attitudes towards safe WASH.

## Association of Schools and Programs of Public Health (ASPPH)

### American University of Beirut, Faculty of Health Sciences

**This is the Art of Public Health**

American University of Beirut  
Faculty of Health Sciences

This is the Art of Public Health is a social media campaign which collects short testimonials about PH champions in all walks of life in Lebanon and the Arab region who will share their stories or those of champions who contribute to the public's well-being either through their work or voluntarily. The campaign will highlight examples of PH issues and how PH builds on these initiatives with scientific approaches. It will connect with the Faculty's "It is time to act" marketing campaign addressed to parents and future public health students. It aims to promote the notion of PH and PH issues; highlight PH career opportunities through the testimonials; and underscore that PH is a field of study.

## University of California, Irvine, Department of Population Health and Disease Prevention

### Antibiotics Stewardship is Public Health

Improving stewardship of antibiotics is a multisectoral challenge, encompassing several professions and academic disciplines, including agriculture, medicine, nursing, pharmacy, environmental science, behavioral science, and community engagement. In short, “Antibiotic Stewardship is Public Health”, with imperative actions for public education, effective translation of knowledge into action, fail-proof implementation of best practices globally, and international collaboration. These imperatives anchor the foundation of our project and its overarching goal to build on fundamental investigation of knowledge, attitudes and practices regarding antibiotics stewardship using implementation science framework for effective cross-sector stakeholder engagement in national action plans and sustainable communities of practice on antibiotic stewardship.

## KIIT School of Public Health

### Enhancing awareness and knowledge on Prevention of Antibiotic resistance among the personnel manning the Retail pharmacy stores in the city of Bhubaneswar, Odisha, India: THIS IS PUBLIC HEALTH

**SCHOOL OF PUBLIC HEALTH**  
**KALINGA INSTITUTE OF INDUSTRIAL TECHNOLOGY**  
Deemed to be University U/S 3 of the UGC Act, 1956

Antibiotic resistance is a growing problem and a threat to global public health. Antibiotics are often misused in retail pharmacy stores. The project aims to study the current level of awareness, knowledge and attitude towards antibiotic resistance and to design a customized capacity building intervention for pharmacists/ other dispensers in 100 registered retail pharmacy stores selected randomly in Bhubaneswar city, Odisha, India. The activities under the project for implementation includes (1) Social mapping and geo-coding of the retail pharmacies, (2) Baseline assessment of knowledge, attitude and practice of pharmacists/other dispensers, and (3) Designing and executing a capacity building program.
