

Cold Regions Bibliography Project, Washington, D.C. 20540.

Some respondents included unsolicited comments. Prominent in this category was the opinion that the index cards distributed in the past were more useful than the present format. Since our computerized method makes a page format more economical than cards, we cannot accede to this suggestion. As a compromise we have been printing CAL on one side only, leaving blank the back side of each page; entries may be cut out and mounted on index cards.

Requests for CAL should be sent to the Office of Polar Programs, Polar Information Service, National Science Foundation, Washington, D.C. 20550. This work is supported by National Science Foundation grant cv-36656.

Antarctic Map Folio Series

VIVIAN C. BUSHNELL
Research Publications
American Geographical Society
New York, New York 10032

Work continued during 1973-1974 on *Antarctic Map Folio Series* numbers 18 (scheduled for publication in late 1974) and 19 (scheduled for publication in late 1975). The series, folios 1 through 18, is available from the American Geographical Society, Broadway at 156th Street, New York, New York 10032.

Folio 18, "Antarctic mammals," summarizes—through maps and texts—the geographic distribution, the biology, and the physical characteristics of whales, seals, and dolphins found in antarctic waters. Folio 18 includes data from recent systematic seal population studies; it also includes an extensive bibliography of related research works. Authors of folio 18 are N. A. Mackintosh and S. G. Brown, A. W. Erickson and R. J. Hofman, and R. L. Brownell, Jr. The foreword is by George A. Llano.

Antarctic Research Series and SAE Information Bulletin

JUDY C. HOLOVIAK
American Geophysical Union
Washington, D.C. 20006

In a continuing program of publishing antarctic science papers that usually are too detailed or too lengthy for inclusion in standard scientific journals, volume 21 of *Antarctic Research Series* was released this fall and volumes 22 and 23 are scheduled for release this winter.

Volume 21, *Recent Antarctic and Subantarctic Brachiopods*, is a comprehensive study based on samples collected at more than 200 sites during about 30 oceanographic expeditions from 1851 to 1969.

Volume 22, *Human Adaptability*, records human responses to isolation and confinement in Antarctica's harsh environment.

Volume 23 is planned as the first handbook of this series: a guide to resident and migratory antarctic birds.

Volume 24 will mark a change in the series' format and method of distribution. Individual papers of a volume will be printed and issued as quickly as possible. Usually a paper will appear under one cover; if the subject matter is similar for two or three shorter papers and if they can be published at about the same time, however, they will be bound and issued simultaneously. When the last paper of a volume has been published, the entire book will be available on microfiche at a lower price than the combined cost of individual papers. This new system, in addition to being more economical, is designed to avoid previous publication delays.

Soviet Antarctic Expedition Information Bulletin. This translation series contains intermittent reports from Russian antarctic scientists. Volume 8 (bulletins 79 through 90) is in progress.

Information on subscriptions and on purchases of back volumes, for both *Antarctic Research Series* and *Soviet Antarctic Expedition Information Bulletin*, is available from the American Geophysical Union, 1909 K Street, N.W., Washington, D.C. 20006.

Publication of *Antarctic Research Series* and translation and publication of *Soviet Antarctic Expedition Information Bulletin* are supported by National Science Foundation grants GN-55 and cv-32923.
