1. Introduction

Off-air television stations broadcast signals from terrestrially-based facilities directly to television receivers. Comsearch identified those off-air stations whose service could potentially be affected by the proposed Arkwright Summit Wind Farm project in Chautauqua County, New York. Comsearch then examined the coverage of the stations and the communities in the area that could potentially have degraded television reception due to the location of the proposed wind turbines.

2. Summary of Results

The proposed wind energy project area and local communities are depicted in Figure 1, below.

Figure 1: Wind Farm Project Area and Local Communities

To begin the analysis, Comsearch compiled all off-air television stations¹ within 150 kilometers of the center of the project area of interest (AOI). Appendix A contains a tabular summary of these stations. A plot depicting their locations appears in Figure 2, below.

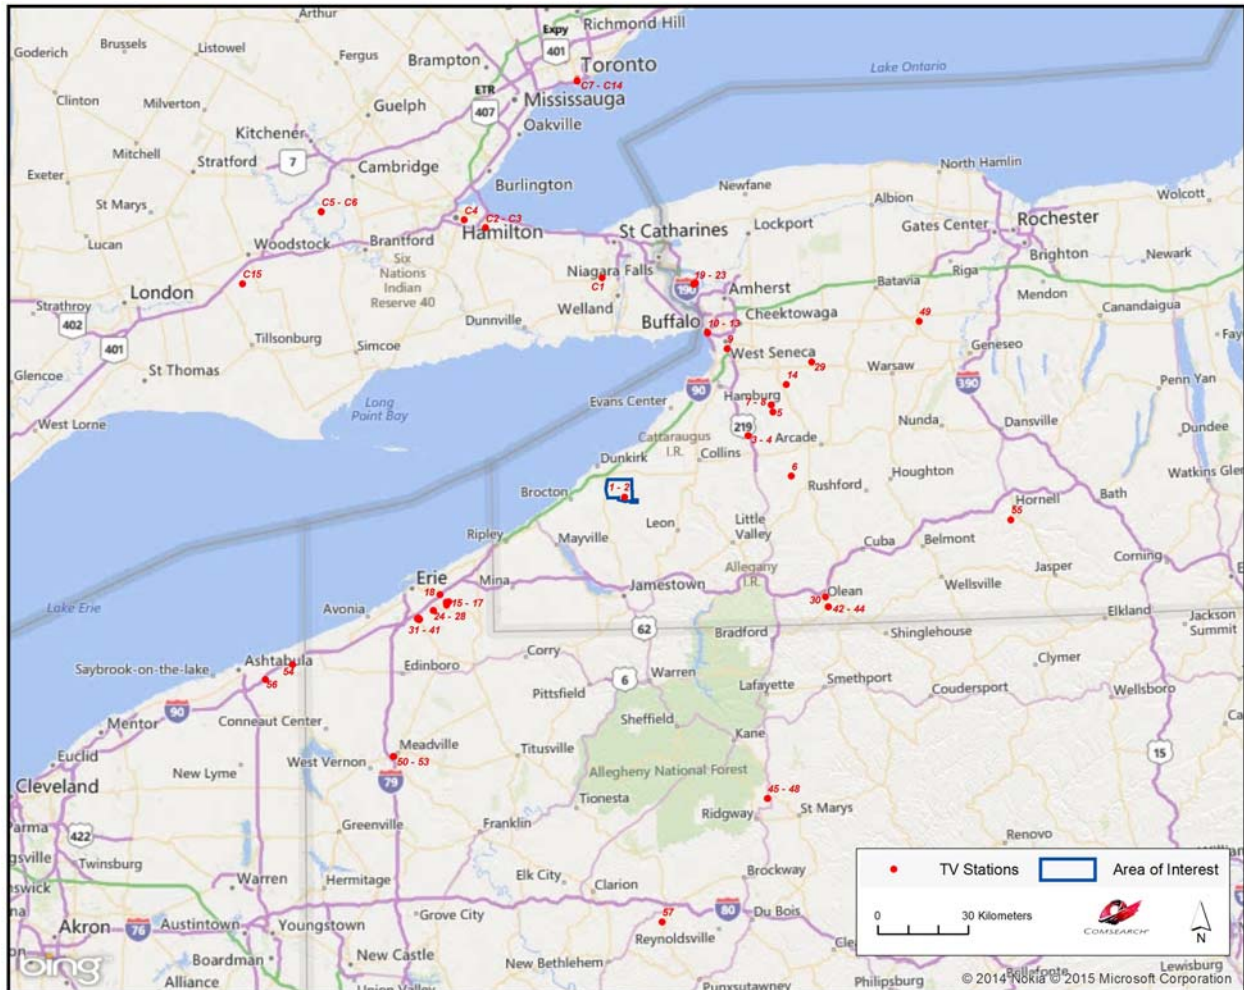

Figure 2: Plot of Off-Air TV Stations within 150 Kilometers of Project Area

TV stations at a distance of 75 kilometers or less are the most likely to provide off-air coverage to the project area and neighboring communities. These stations are listed in Tables 1 and 2, below, and a plot depicting their locations is provided in Figure 3. There are a total of forty-five database records for stations within approximately 75 kilometers of the limits of the project AOI,

¹ Comsearch makes no warranty as to the accuracy of the data included in this report beyond the date of the report. The data presented in this report is derived from the TV station's FCC license and governed by Comsearch's data license notification and agreement located at http://www.comsearch.com/files/data_license.pdf.

forty-four in the United States and one in Canada. Only twenty-three of these stations are currently licensed and operational, seven of which are low-power stations or translators. Translator stations are low-power stations that receive signals from distant broadcasters and retransmit the signal to a local audience. These stations serve local audiences and have limited range, which is a function of their transmit power and the height of their transmit antenna.

Figure 3: Plot of Off-Air TV Stations within 75 Kilometers of Project Area

Table 2: Off-Air TV Stations within 75 Kilometers of Project Area (Canada)

3. Impact Assessment

One of the licensed full-power stations, WNYB, lies within the project area of interest. This station is licensed to Faith Broadcasting Network, Inc. of Marion, Illinois. Depending on the final determination of the turbine locations, reception of this station may be severely disrupted by the Arkwright Summit wind energy project.

In addition, thirteen of the other licensed full-power stations, WBBZ-TV, WKBW-TV, WIVB-TV, WGRZ, WUTV, WNLO, WNED-TV, WSEE-TV, WICU-TV, WNYO-TV, WQLN, WFXP, and WJET-TV, may have their reception disrupted in and around the project, primarily in locations on the opposite side of the project area, relative to the station antennas. Communities and homes to the south and west of the project may have degraded reception of stations WBBZ-TV,

⁴ Definitions of Canadian class and status codes:
R – Regular VHF Television Broadcast Station
OP – Licensed and operational station

WKBW-TV, WIVB-TV, WGRZ, WUTV, WNLO, WNED-TV, and WNYO-TV, which are located northeast of the project area, after the wind turbines are installed. Similarly, stations WSEE-TV, WICU-TV, WQLN, WFXP, and WJET-TV, which broadcast from southwest of the project area, may have diminished reception in communities directly to the north and the east.

4. Recommendations

Both cable service and direct broadcast satellite service will be unaffected by the presence of the wind turbine facility and may be offered to those residents who can show that their off-air TV reception has been disrupted by the presence of the wind turbines after they are installed.
