Omega Gents STEM program full speed ahead!

The Omega Gents STEM program meets every Wednesday. The program has 12 boys and 3 girls and has really taken off since the initial kickoff.

Instructor James Harding has been teaching students on how to code using the Google program Scratch. Once they develop coding skills, they will use them to move robots and characters on screen. He has also demonstrated to the students how to fly a drone, which will be part of the lesson plan in the future. A foreseeable goal is to have our students compete in STEM competitions as well as pursue an education and career in one of the STEM areas.

Gents training to become leaders in the world!

The Omega Gents are currently learning at their Leadership Academy how to become leaders not only at school but in the community and society in general. Some of the topics they are being instructed on is the building blocks of the program, displaying great character and integrity at all times, how to be an exceptional follower before becoming a leader and Robert's Rules of Order.
