Car owners are turning to ceramic coatings to replace [car wax](https://www.carbibles.com/best-car-waxes-reviewed/) (<https://www.carbibles.com/best-car-waxes-reviewed/>), and it's clear to see why: longer-lasting results, heightened durability, and an overall more aesthetic exterior. But not all ceramic coatings are created equal, which is why we've taken to testing dozens off different coatings on multiple test vehicles. Based on the ease of application, longevity, use in inclement weather, and the overall quality, we've narrowed it down to eleven of the best ceramic coatings on the market. If you're ready to save hundreds (or potentially thousands) by going the DIY route instead of getting an expensive professional coating done, you've come to the right place.

## The Best Ceramic Coating For Cars

Everything you need, all in one place. Avalon King's DIY kit includes a high-quality microfiber rag, protective safety gloves, and of course, the cream of the crop in ceramic car coatings. We've been driving with Avalon King protecting our cars (three of us) for a little over a year, and there's no sign of going back anytime soon. Anytime you hear about a revolutionary product for your car, you quickly just to conclusions of hyperbole, but Avalon King delivers on their promises.

First and foremost, you'll be saving a lot of money. You could go with cheap coatings that last for a year (or maybe two if you're lucky), but Avalon King lasts for three to five years on average, and was designed for the daily driver. If you want a Hollywood shine on your ride, you can achieve it without paying the cost of a professional coating. Unlike "big brands" in the ceramic coating industry, Avalon King gives you their optimal product, and nothing less. Many professional grade products sell a watered down version for consumer use, but that's not what you're looking for.

So Avalon King lasts for longer and saves you money, but it also included a nearly flawless application. The instructions are clear as can be, ensuring a professional look without having to pay professional prices. Zero spots, little to no buffing required, and the most solid coating you can get for your car. Through all of our research and application, nothing puts a candle to Avalon King in terms of quality. They're even committed to getting your product to you as fast as possible, averaging a two-day delivery window from your time of purchase, and shipping it out in safe, durable packaging.

### Key Features:

- › Self cleaning mechanism
- › Easy application
- › Very long lifespan of 5 years
- › Innovative nanotechnology

### Specification:

Here is another ceramic coating product from CarPro; the CarPro Cquartz kit, a professional ceramic coating product. With its advanced formula, this is a product that is preferred and used by many professionals around the world, to protect and prolong their vehicle's painting/coating. Many car enthusiasts also agree that this is one of the best ceramic coating products ever to hit the shelves of stores in recent time. This is easy to apply the product, which offers protection and gloss superior to that of all competitors who claim to provide your vehicle with a professional coating. The difference between the CarPro Cquartz and other coating products is how easy it is to use for all retailers.

When applying this ceramic car polish, you don't need any complicated machine or a lot of effort, thanks to its enhance fast action formula. With a higher percentage of purity and up to 70% of quartz, the CQuartz coating helps your vehicle develop resistance to bird dropping damage, wash induced marring, stains, traffic film and high or low temperatures. Each kit contains items such as the CQuartz coating, five suede microfiber cloths, an applicator, and an optional rear view mirror hanger.

### Key Features:

- › 5 Suede Microfiber Cloths
- › 50 ml. CQuartz
- › 70% Quartz with 99.9% purity
- › Enhanced Fast Action Formula

### Specification:

Unlike other ceramic coatings for cars, the Nasiol ZR53 ceramic coating is a Nanotechnology-based coating product, which has been formulated to bond chemically with all kinds of car paints. With only a single coat, this product stays on your car and protects its surface for up to three years with little to no maintenance needed. The best ceramic coating for cars provides a 9H water repellent coating at the surface and also features a multi-layer technology that enables the layer to remain flexible underneath your paint job. Application of the ZR53 is a natural process and requires no extra skill of knowledge.

For a superior shine, you are not required to put in an intense effort, as elements such as dirt, mud, water and grime slide off the surface of your vehicle. Also, the shine of your car stays for an extremely long time, since the Nasiol sealer is strongly hydrophobic. This results in easy cleaning and helps your vehicle stay shinier and cleaner for longer. It can be applied to car paint, bumpers and plastic rims in one application. At Nano level, this paint sealer gets crystallised but doesn't harden completely. With its two-layer coating system, you have a hard layer at the top of your vehicle, with a softer layer directly beneath it.

#### **Key Features:**

- › Nano car ceramic coating
- › Only one coating is needed
- › It lasts at least three years
- › 9H water repellent coating

#### **Specification:**

Brand	NASIOLOVE & PROTECT THE ORIGINAL
Model	ZR53
Weight	1.76 ounces

Ceramix Wax Top Coat is a product believed by many users and professionals to be the glossiest, slickest and easiest sealer to use currently on the market. It is guaranteed to outshine the competition with its silica infusion technology, which provides a level of shine, clarity and protection which cannot be matched by any other brand. It is a product that is easy to install, either by machine or hand, and it can be wiped off when applied in excess. The application requires no tools or professional knowledge thus; everyone can coat with ease.

The Ceramix Wax Top Coat protects your vehicle from water spots, bird droppings, UVA/UVB rays and contaminants and its hydrophobic nature makes maintenance and cleaning a walk in the park. The semi-permanent barrier formed by this paint coating can last for up to one year with proper maintenance, as this ceramic car wax comes with the shine, gloss and durability of a professional ceramic coat. Save time with one of the best liquid sealants currently on the market, and watch how your car shines with little to no effort. It is a non-stick, durable, water-repelling and a superhydrophobic product that requires only a few drops to achieve a beautiful shine and protection that lasts for a long time. This coating product is safe for motorcycles, stage paint, fibreglass, stainless steel, windows, chrome, epoxy and many more! Make that move now, and you will not regret it.

Key Features:

- › Easy to install
- › 30% pure  $\text{SiO}_2$  silica
- › Hydrophobic surface
- › Year-round protection

The after effect of the application is a vehicle with a glass-like finish which is going to be protected for a long time from chemicals and UV lights. Environmental influences such as tar, road salt, industrial and street pollution, which can damage your vehicle are also kept at bay when the Sonax coating is applied.

#### **Key Features:**

- › Protects against UV light and more
- › Kit Includes all products and tools needed
- › Great for professionals or novice users
- › Protection lasts up to 1 year

#### **Specification:**

Brand	Sonax
Model	236941
Weight	11.2 ounces

## **Best Ceramic Coating For Cars Buying Guide**

### **What to Consider When Buying Ceramic Coating for Cars**

The use of ceramic coating doesn't apply to every vehicle thus; it is vital that we are all made aware of the many factors that must be considered before deciding on whether or not to coat our cars. Keep the elements below in mind, before spending your money on a ceramic coating for your vehicle;

- **Weather**

If you live in areas where your vehicle is exposed frequently to the sun, your truck will need a paint coating. However, cars in places that don't get a lot of suns don't have to be coated. This is because vehicles located in sunny areas need to be given protection against intense UV rays while reducing the oxidation of the car's paint. If you live in a colder area, it is considered a wasteful investment to provide your vehicle with a paint sealant.

- **Frequency**

There aren't many people who love cleaning their cars. Many of us see that as more of a chore thus, we don't enjoy it much. The use of a ceramic coating on your car makes its surface a self-cleaning one, once it comes into contact with water. This means that cleaning will become a less frequent activity, and will also require less effort. In other cases, the advantage of the coating will not be realised in a car that spends time in the garage. This is because such a vehicle does not need frequent washing.

- **Car Usage & Terrain**

The ceramic coating is enjoyed the most by vehicles that are frequently used. This is because such cars are constantly exposed to environmental elements that may diminish the quality of their painting. Garage bounded cars, on the other hand, are not exposed to these elements regularly thus, coating them with a ceramic sealant will be regarded as a waste of resources. The extra protection you receive from the ceramic coating is ideal for all vehicles used daily

in sunny areas, but not for cars used on smooth roads and under overcast weather on weekends.

 **CARBIBLES**  
(<https://www.carbibles.com>)

Due to factors such as washing, the paint on cars tend to thin over time. You should not be considering ceramic coating if you're looking to resell your old car. On an old car, the thinning of your car paint means that the colour has weakened. Before long, it can bond chemically with the vehicle itself, and this may prove too damaging to your car.

- Price

With countless brands and models in the market now, finding the best paint sealer may prove to be a chore. To gain high value for your money, it has been advised that you go through all the features of several products. Streamline them then, by selecting those with similar elements, before picking out one that will offer you value for your budget.

## Why You Should Use Ceramic Coating

- Protection

We all hate seeing our cars look faded and dry; it makes us sad. If you want to lavish your vehicle with extra shine and gloss, you can do this easily with ceramic coating. This will cause your car to steal the show anywhere, with its fascinating looks. As the coating is transparent, it conserves and protects the paint and also gives it an exceptional depth shine. While the nano-sealer forms a protective film on the paint surface of your vehicle, the ceramic coating on a molecular basis makes a connection with the car paint without changing its color. The surface, which is flawless to the naked eye, now consists of such a complex structure that even at the microscopic and nanoscopic level, there is no longer any unevenness. Dirt particles of any kind, therefore, find almost no liability anymore and water simply dries off.

- Ease of maintenance

Another reason for using a ceramic layer is that unlike regular waxing, the ceramic coating doesn't give users any hassle during the process of waxing. This is because of its hydrophobic abilities. For ordinary waxes, you will have to repeat the process at regular intervals whereas ceramic coating only requires a single application.

- Newer, better-looking car

Using a ceramic coating will amplify the overall quality of your car's exterior surface. It protects the paint of your vehicle from getting faded or peeling off, ensuring that the aesthetic features of the vehicle are maintained.

## How to Apply a Ceramic Coating?

- Wrap your application sponge with the provided cloth
- Pour a few liquid drops onto the fabric
- Wipe over the vehicle gently but firmly
- If there's any leftover of the coating, wipe it off using a wet towel.
- Ensure that the coating is uniform.
- For natural drying, leave the vehicle for up to 48 hours.
- Have fun with your new glossy machine!

## Best Ceramic Coating For Cars FAQ:

### Q: How Long Does Ceramic Coating Last?

**A:** As a ceramic treatment is a treatment of greater resistance than the known ones; it often offers greater resistance than acrylic and wax. Also, the level of protection offered is much higher - ceramic manufacturers often mention that their products will last 3 years or 5 years or more. However, there is no true answer to how long a ceramic treatment or an acrylic or wax treatment will last. It also depends greatly on the maintenance that is done and the care given to the car. In many cases, if the right care is taken, the ceramic coating applied on a vehicle can last a lifetime.

In truth, it can last very long, but without proper maintenance, it will not last a year. Even if the box of the product says that it will last 2, 3 or 5 years, this does not indicate that after applying it you should forget about regular care.

It is also advisable to put on ceramic and do proper maintenance every 3 or 4 months depending on how often the car is used; this way, your car is guaranteed longer protection. During each maintenance session, remember to also decontaminate the car before applying ceramic reinforcement (preferably of the same brand of ceramic that you applied). We should also remind you that a car wash is not classed as maintenance - that is simply cleaning the car.

### Q: Is ceramic coating an alternative to waxing?

**A:** Yes. It is a coating type that makes use of a liquid polymer which usually has the capability of bonding to your vehicles default paint. There is a protective layer that is formed when both elements, that is the default paint and the coating are bonded chemically. One advantage of a ceramic coating is that, once it's been applied, it can never be removed. This is not the case for other brands on the market; thus, the ceramic coating stands out from among its competition. It is a great alternative to waxing because you will never have to use abrasive washes or wax again once a ceramic coating is applied to your car.

### Q: Will ceramic coating protect my car from scratches?

**A:** Cars are not immune to scratches, even though their coating is hugely beneficial to their protection from many elements. Scratches can be avoided if the application of the sealant is adequately made, but it can't be prevented.

### Q: How do I maintain my ceramic coated car?

 A: Create a washing regimen and stick to it. When washing, make use of a neutral shampoo and avoid air drying of your car as much as possible. Other cleaning benefits include:   
(<https://www.carbibles.com>)

Hand washing includes virtually no water consumption. Also no chemicals, rim cleaners or special agents are needed, only a ph-neutral car care shampoo is needed. You can also use a spray shampoo with a pump sprayer and the car can be cleaned with a damp or dry microfiber cloth.

At a car wash, the brake dust is removed completely along with all insect remains. The best part is that the car wash scratches can no longer arise with dirt at critical points dissolved. Additionally, the need for polishing is completely eliminated. Your vehicle shines without having to polish it consuming. You can moth up your polisher and go for a coffee.

## Our Top Pick

Our Top pick is the [Avalon King Armor Shield IX DIY Kit \(https://avalonking.com\)](https://avalonking.com), which has been formulated to keep your car perfect at all times. It offers a flawless aesthetic, and a stunning shiny gloss finishes, with other impressive results such as the protection of your car paint with a protective top coat.
