Spring Training Rides

When was the last time you looked at your bicycle? Sure it's been cold outside, but that's no excuse. It's time to saddle up and begin training for spring and summer riding, including Tour de Tulsa, FreeWheel, Tour de Cure, Tulsa Tough and more!

Expectations

- **Get your bike tuned up!**
- **Be On Time and Be Ready!**
- **Carry a spare tube.**
- **Carry a water bottle.**
- **Plan to ride the full distance.**

We want you to have a good ride.

That means we want you to show up for the ride prepared to have a good ride.

Get a Tune-Up. We expect you to be riding a bike that is in reasonably good repair. In other words, we don't want to spend time fixing your bike along the way. So take your bike in for a tune-up if you're not able to get it prepped yourself.

Don't make us wait on you, please. Show up early enough to get you and your bike ready to ride by the start time!

Have a spare tube! Be prepared to assist in repairing a flat; at a minimum, have a spare inner tube of the appropriate size for your bicycle.

Bring water! You should carry at least one water bottle and preferably two and be prepared to refill when the opportunity arises. Hydration is important and it's your responsibility.

Can you go the distance? If you can't ride the distance planned, then please don't start. You'll know after the first few short rides what you're realistically capable of. Although you're welcome and encouraged to challenge yourself, do so intelligently.

Before You Begin

So, it's been a while since you were on a bike ... heck, maybe it's been a while since you've been off the couch for any length of time? Before you begin any exercise or training program, you should assess your present physical state. A tool to help you is the "Physical Activity Readiness Questionnaire" or PARQ. This questionnaire, used widely by exercise professionals, will help you assess your fitness level and encourage you to visit with your physician before entering into an exercise program if you identify certain risk factors, including not having exercised regularly in a long while. Be honest in your assessment of yourself and err on the side of caution. Refer to the previous paragraph on "Expectations." You owe it to yourself to adequately prepare and not put yourself at risk when preparing for any event ride.

Answer [PAR-Q questions](#) from the National Academy of Sports Medicine:
