Racing Tips

as seen in DSA Newsletter (Denver SA)

Light Air: Move gently in the boat so the flow of air over the sail and the water flow over the hull and foils is not disturbed.

Keep your telltales working in the rain:

Simply rub the tell tale and the surface of the sail within its reach with ordinary candle wax. This will even keep regular wool ticklers flying in the heaviest downpour. Alternatively boycott rainy venues!

Sail blindfolded: Try this for a while to increase your awareness of how body movements in the boat affect the boat's speed and trim. This can also be achieved by sailing at night. Only do this in a controlled safe environment.

In the break between races, you and your crew will need to take food and drinks to help replenish energy. Consider solid foods like bananas, fruit, and low-fat bars, such as Power Bars. It is necessary to wash solid foods down with sports drinks to help with rehydration.

720-Degree Turns: The turns must be taken as soon as possible after the incident. You must do two full turns (two gibes and two tacks) in the same direction and the second turn must follow on after the first.

Fall Classic

September 17-19, 1999

Fleet 48 North Lake Yacht Club, WI

Report from Tim Fredman

Two days of sunny, 75-degree weather, with light-to-moderate and occasionally gusty winds provided ideal conditions for Wisconsin sailing. Southeast winds prevailed with an occasional brief shift to the South.
