5. Gravity Forms

The image shows the Gravity Forms website header and main content. The header is a dark blue bar with the Gravity logo (a red hexagon with a white 'G') and the word 'GRAVITY' in white. To the right of the logo are links for 'PRICING', 'FEATURES', 'ADD-ONS', 'COMMUNITY', 'SUPPORT', and 'LOGIN'. The 'NEW' tag is above 'COMMUNITY'. Below the header, the main content area has a white background. It features the text 'Gravity Forms is the Easiest, Most Trusted Tool to Create Advanced Forms for Your WordPress-Powered Website.' followed by an illustration of a laptop and a tablet. The laptop screen shows a form with a '2 NEW LEADS' notification. A large white arrow points from the Gravity logo to the laptop screen. Below the illustration, the text reads 'Stop Losing Valuable Leads & Grow Your Business with a Professional Contact Form.'

Gravity Forms is the Easiest, Most Trusted Tool to Create Advanced Forms for Your WordPress-Powered Website.

Stop Losing Valuable Leads & Grow Your Business with a Professional Contact Form.

6. Easy HTTPS (SSL) Redirection

HTTPS Redirection Settings

When you enable the HTTPS redirection, the plugin will force redirect the URL to the HTTPS version of the URL. So before enabling this plugin's feature, visit your site's HTTPS URL <https://www.ghgelevate.com> to make sure the certificate is not installed correctly on your site or the HTTPS URL is not working and this plugin is auto redirecting to the HTTPS URL.

Important! If you're using caching plugins similar to W3 Total Cache or WP Super Cache, you need to clear their cache after you enable or disable automatic redirection option. Failing to do so may result in mixed content errors.

Enable automatic redirection to the "HTTPS"

Use this option to make your webpage(s) load in HTTPS version only. If someone enters a non-https URL in the browser's address bar then the plugin will automatically redirect to the HTTPS version of that URL.

Apply HTTPS redirection on:

The whole domain

A few pages

<https://www.ghgelevate.com/>

Force resources to use HTTPS URL

When checked, the plugin will force load HTTPS URL for any static resources in your content. Example: if you have have an image embedded in a post with a NON-HTTPS URL, this option will change that to a HTTPS URL.
