Migraine Management for Practitioners

—
Migraines are a leading cause of adult disability with an estimated five million headache sufferers in Australia. Primary healthcare physicians need to understand the latest advances in the diagnosis and treatment of migraines to manage patients who suffer from this debilitating condition.

Education focused on the essentials of migraine management, which transfers specialist knowledge from neurologists to general practitioners, will improve the lives of these patients.

Course Director Tissa Wijeratne, Chair of Academic Medicine and Director of Neurology at Western Health, and his team of neurologists have developed this dynamic course to capture the most recent clinical research and developments in migraine management.

Convenience

Fully online. Study on iOS, Android and Windows devices or on web

Reinforcement

6 interactive tutorials and 20 online case studies to practise interpretation.

Recognition

Certificate of Completion issued upon course completion.

For more information, visit go.unimelb.edu.au/gj2r
