

8-UNIT 500mA SOURCE TYPE DARLINGTON TRANSISTOR ARRAY WITH CLAMP DIODE

DESCRIPTION

M54563FP is an eight-circuit output-sourcing Darlington transistor array. The circuits are made of PNP and NPN transistors. This semiconductor integrated circuit performs high-current driving with extremely low input-current supply.

FEATURES

- High breakdown voltage ($BV_{CEO} \geq 50V$)
- High-current driving ($I_o(\max) = -500mA$)
- With clamping diodes
- Driving available with PMOS IC output of 6 ~ 16V or with TTL output
- Wide operating temperature range ($T_a = -20$ to $+75^{\circ}C$)
- Output current-sourcing type

APPLICATION

Drives of relays, printers, LEDs, fluorescent display tubes and lamps, and interfaces between MOS-bipolar logic systems and relays, solenoids, or small motors

FUNCTION

The M54563P and M54563FP each have eight circuits, which are made of input inverters and current-sourcing outputs. The outputs are made of PNP transistors and NPN Darlington transistors. The PNP transistor base current is constant. A clamping diode is provided between each output and GND. Vs and GND are used commonly among the eight circuits.

The inputs have resistance of $3k\Omega$, and voltage of up to 10V is applicable. Output current is 500 mA maximum. Supply voltage Vs is 50V maximum.

The M54563FP is enclosed in a molded small flat package, enabling space-saving design.

PIN CONFIGURATION

Package type 18P4G(P)
