

Paramount Pictures leverages CRM and the Streamline Solutions "Workspace."

Situation

At the time, the Paramount department that we were dealing with was using a Sharepoint to track the production of products made in multiple versions. Unfortunately, the existing systems did not have any relationship management between

records. The only way to track each type of unit was to create a completely new asset. This then led to an inability to link all of the different versions together and left an imperfect view of production. For example, DVDs get made in different languages, like all products these DVDs needed to be tracked for inventory. Without being able to do this correctly Paramount's data base was bloated and disorganized. Each DVD had to have its own separate entry for each language that it was made in. This inefficiency led to a loss in not only time, but also money.

Solution

Paramount Pictures began using Microsoft SharePoint Server to manage both customer and license information. While this was doable for a time Sharepoint was not able to fulfill everything that Paramount was looking to do. With continued use a true CRM application was required to track the numerous activities and relationships that were being generated. Microsoft Dynamics CRM was the natural evolution of their business application.

Once Microsoft was consulted xRM was approached to address the issue and complete an implementation. Paramount wanted a system to track their product, while at the same time giving them the ability to create a relationship between all of the different versions of each product. xRM worked to build a customized version of Microsoft

CRM 3.0 that would fulfill these needs.

Microsoft CRM was leveraged to create the necessary entities and relationships and brought its native functionalities of managing the sales cycle right from the Outlook client.

SQL Reporting Services was put into place as a powerful analytical tool. The Microsoft Dynamics CRM embedded reporting engine integrated smoothly with Microsoft SQL Server to generate compelling data reports for Paramount's decision makers.

Benefits

Through Microsoft Dynamics CRM adaptive workflow Paramount was able to automate processes alleviating mundane vital work. Time consuming repetitive tasks could now be taken care of by the CRM system giving more time to be

focused on other tasks. Flexibility was added in case of the need of future growth with the added benefit of the familiar environment of Microsoft Outlook.

SQL Server 2005 took over data management allowing not only CRM but also other software packages to utilize stored data. Downtime issues were minimized while adding a higher level of security to protect key information. This was a key part of Paramount's solution, allowing scalability, manageability, and reliability to database administration.

Analytics could now be done through SQL Server Reporting Services. Giving reports directly to

CUSTOMER PROFILE

Paramount Pictures Corporation is a major American motion picture production and distribution company, based in Hollywood, California. Founded in 1912, it is the oldest running movie studio in Hollywood, beating Universal Studios by a month.

About xRM

Thank you for visiting xRM.com. xRM is a Microsoft Partner and Microsoft Dynamics Inner Circle invitee providing Microsoft Dynamics CRM, application hosting, software development, and consulting. We offer our customers unparalleled choice and flexibility when it comes to deployment models (on-premise, hosted, or hybrid) and professional services.

to Microsoft Office in not only traditional paper oriented reports, but also into an interactive web based report. A real time reporting service was not able to be accessed to assess daily operations to direct decisions.

Microsoft Dynamics

Microsoft Dynamics is a line of integrated, adaptable business management solutions that enables you and your people to make business decisions with greater confidence. Microsoft Dynamics works like familiar Microsoft software such as Microsoft Office, which means less of a learning curve for your people, so they can get up and running quickly and focus on what's most important. And because it is from Microsoft, it easily works with the systems that your company already has implemented. By automating and streamlining financial, customer relationship, and supply chain processes, Microsoft Dynamics brings together people, processes, and technologies, increasing the productivity and effectiveness of your business, and helping you drive business success.
