

## Introducing the Lincoln 18v Li Ion PowerLuber

This new cordless grease gun provides technology and performance previously unavailable to the industry.

The innovative design incorporates not only outstanding run-time, output pressure and grease flow but also includes a multi-function LCD that displays:

- The quantity of grease dispensed
- The quantity of grease remaining in the cartridge
- The battery charge level, operation signal and stall indicator

Stop wasting grease. Over greasing a lube point can do more than just waste valuable grease. It can also damage seals, load bearings and create excessive heat that shortens a bearing's operating life. The new Lincoln PowerLuber series LI-1 allows the user to monitor grease output for extended equipment life while saving lubricant and improving run time.

## Features and Benefits

- The output display is very simple to understand and can be easily reset between lube points if a predetermined amount of grease is required while still maintaining a cumulative value.
- The cartridge-level display prevents the user from getting caught empty in the field because it was thought grease still remained in the gun.
- Our engineers have also added a LED to the front of the gun to shine light on grease points in shaded areas under equipment or when lubing early or late in the day.
- The high-amperage, lithium-ion technology provides fade-free delivery and outstanding run time while offering three times the life span of NiCd batteries.
- The new LI-1 series includes thermal motor protection, a protective cartridge guide, extended hose length and more. Please visit [PowerLuber.com](http://PowerLuber.com) to view all the features and benefits this gun has to offer.

Model Number	U.S. List Price
Model 1862 Single Battery PowerLuber	\$535.00
Model 1864 Dual Battery PowerLuber	\$695.00
Model 1861 Battery	\$175.00
Model 1850 Charger	\$79.00

See Brochure Form 444568 for a complete list of features and benefits.
