## Lincoln models 3635, 3637 and 3639 portable used fluid equipment

Lincoln's 3630 series of portable used fluid collection equipment offer solid construction and outstanding features that set them apart from the competition. All three models feature a 25 gallon (95 liter) welded-steel tank supported by heavy-duty 4 in. (102 mm) swivel casters and 6 in. (150 mm) fixed-axle wheels. Emptying the tanks requires only shop air and a standard tire chuck to discharge the fluid through a 6 ft. (1,8 m) nylon-reinforced hose. A steel J-hook on the output of the hose is convenient to secure in the opening of a bulk storage container or fill pipe. All models also include a built-in fluid level sight gauge, tool tray and tank-mounted clip for securing the discharge hose when not in use.

**Model 3635 gravity drain** has a portable upright configuration commonly used for collecting fluids under lift-mounted vehicles. It offers a 15 in. (381 mm) offset funnel that includes a removable filter screen and wide-mouth extension that increases the diameter to 24 in. (610 mm). Height is adjustable from 51 to 76 in. (1,3 to 1,9 m), not including the extension.

**Model 3637 used fluid evacuator** utilizes a powerful compressed-air-operated venture to quickly extract fluids from reservoirs or directly through a dipstick tube. Simply attach shop air to charge the tank, attach one of the six choices of wands, insert the wand and open the valve.

**Model 3639 combination used fluid drain and evacuator** combines the features of the 3635 drain and 3637 evacuator into a single unit, giving operators the choice to collect fluids by gravity from lift-mounted vehicles or using a venturi to extract fluids directly from reservoirs or through a dipstick tube.

For more details on features and accessories, refer to Lincoln sales flyer 444587, or go to [lincolnlube.com](http://lincolnlube.com) for additional information and to download images.
