

Mityvac MV6412 2.5-gallon ATF Refill System

Mityvac is pleased to announce the release of our new model MV6412 2.5-gallon ATF Refill System. The MV6412 extends our line of quality equipment for filling and topping-off sealed automatic transmissions, by offering increased refill capacity over existing models. The 2.5 gallon (10 liter) reservoir doubles the volume of our existing model MV6410, reducing the time a technician has to spend refilling the reservoir on bigger jobs.

Like our popular MV6410 1-gallon ATF Refill System, the MV6412 combines a fluid reservoir and lid with integrated pressure pump, with our popular set of ten ATF refill adapters, designed for filling or topping off today's sealed automatic transmissions. The MV6412 also includes a narrow 12" long wand for reaching and dispensing fluids into tight areas, and a convenient hanging hook, as well as a number of unique features such as:

- Large 2.5-gallon (10-liter) reservoir reduces work stoppage required to add fluid
- Integrated pump pressurizes reservoir to provide a smooth continuous flow of fluid
- Safety relief valve to prevent over-pressurization
- Tilt valve for manually relieving pressure in the reservoir
- Automatic safety shutoff valves at the reservoir and accessory fittings, prevent fluid from discharging if disconnected prior to relieving pressure
- Ball valve integrated into the dispensing hose allows operator to manually control the flow of fluid
- Built-in gauge indicates dispensing pressure
- Push-to-connect quick-change fittings make accessory and hose changes quick and convenient

Model MV6412 is available for order and immediate shipment. For more details on features and accessories, refer to Lincoln/Mityvac sales flyer 444054, or go to Mityvac.com for additional information and to download images.

Sincerely,

Mark Allen
