CHEMICALS, FERTILIZER AND SEED. THEY ARE HEADQUARTERED IN ULYSSES, KS.**

Benefits of a Quicklub® Automated Lube System

Return on Investment

"It takes 30 to 40 minutes to manually lubricate a sprayer. The machine will cover approximately 70 acres per hour. We make about \$4 per acre. That's about \$140 of lost income per day. That adds up to a lot of money at the end of the year."

Increased Efficiency

"We don't make money when the sprayers are sitting still. It has to be rolling in the field to make money. Our reputation is on the line every time one of our operators hits a field. The more I can do to make my operators' job easier, the more profitable it will be for me."

Increased Resale Value

"We typically trade in our sprayers every two to three years. We do a lease operation. Our dealers know that the machines returned with Quicklub systems installed have been well maintained. They are more inclined to do business with us on a yearly basis."

Operates While the Machine Is Running

"Our operators know how to properly lubricate their machines. However, they also know their manager is telling them they have a lot of ground to cover. The Quicklub system works while the machine is running, allowing the operators more time in the fields."
