Describe the present and original (if known) physical appearance

The district consists of four early steel-framed skyscrapers located on the four corners of the early major intersection of the city. The two earlier buildings--The Woodward and the Brown-Marx--are commercial-style structures, which sit diagonally across the intersection from each other on the Southwest and Northeast corners, respectively. The two later buildings--The First National Bank Building--John A. Hand and the Empire Building--are elegant towers, extravagantly decorated with marble and glazed terra cotta in Neo-classical motifs.

Three of the four buildings were individually listed on the National Register of Historic Places -- The Woodward, 6-30-83; The John A. Hand, 9-29-83; and the Empire, 3-19-82. Each is extensively described in the original nomination.

1. The Woodward Building (1927 1st Avenue North, SW corner 1st Ave. and 20th St. N.): 1902, with 1930 alterations; Chicago Commercial style; 10-story, tan brick with terra cotta molding dividing it into a 2-story base, 7-story mid-section, and 1-story top crowned with a classical cornice.
2. The Empire Building (1928 1st Avenue North, NW corner 1st Ave. and 20th St. N.): 1909, Neo-classical revival, 16-story, sheathed with white and polychromed terra cotta and richly decorated with Renaissance Revival Classical ornaments.
3. Brown-Marx Building (2000 1st Avenue North, NE corner 1st Avenue and 20th St. N.): 1906, 1908, 1930; Chicago Commercial style; 16-story, tan brick, first three floors were originally faced with two-story brown stone pilasters and rusticated stone arches around 3rd floor windows, refaced in 1930's and 1960's; cornice of stylized copper leaves removed in 1970's, building retains its basic massing (base shaft, and cap) its steel frame skeleton, brick vertical piers, and ribbon bands of windows. Interior alterations include: reduction of two-story lobby to one by lowering ceiling, removal of some marble wall sheathing and selected transoms. Still remaining are: Marble lobby floor, most transom windows, winding iron stairwell with railing, marble elevator walls, original doors and casings, mail shutters and fire doors. Also a 22-stall marble bathroom.
4. John A. Hand Building--First National Bank (17 20th Street North, SE corner 1st Avenue N. and 20th Street N.): 1912, 1940 addition; Neo-classical revival, 21 stories, white glazed terra cotta sheathing on main elevations, rich marble and terra cotta detailing, 1940 two-story wing and 1955 five-story western addition.

Statement of Significance (in one paragraph)

Architecture: Criterion C

"The Heaviest Corner on Earth" is a rare and perhaps unique concentration of four steel-frame skyscrapers constructed between 1902 and 1913. Individually distinguished for their design and associations, the buildings -- which sit on the four corners of the city's first major intersection -- as a group are of regional, or possibly national, significance. Three of the four have been individually listed on the Register -- The Woodward, First National Bank--John A. Hand and the Empire Building.

The buildings were designed by two important local architects of the period (in association with out-of-state firms on three of the four buildings), William C. Weston and William L. Welton.

The two earlier buildings, the Woodward (1902-03, Stone Brothers, New Orleans, & William C. Weston, Birmingham; Purdy & Henderson, Chicago, engineers; John Griffiths & Sons, Chicago, contractor) and the Brown-Marx (1906-1908, William C. Weston) are good examples of the Commercial style: a substantial base, an extensive and plain mid-section reflecting the skeletal structure and repetitious nature of offices on the interior, and crowned by a large projecting cornice (now removed from the Brown-Marx Building).

The two later skyscrapers, the John A. Hand--First National Bank Building (1912, William Leslie Welton, Uffinger and Mowbray, Assoc.) and the Empire Building (1913, William Leslie Welton, with William Warren, Carpenter and Blair, New York Associates) are elegant towers, extravagantly decorated with marble and glazed terra cotta in skilled interpretations of classical motifs.

Industry: Criterion A

As a collection the buildings are unsurpassed in their documentation of Birmingham's major development phase when the capacity of local furnaces to manufacture steel in quantities from local raw materials led to the growth that dramatically changed the vertical scale of the existing Victorian city and made Birmingham the largest city in the state. Each of the buildings is associated with major industrial and commercial enterprises that shaped the city.

Entered in the
National Register
