DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Lagonda Club Building gives almost exactly the same external appearance today as it did when opened in 1895, except for the normal accumulation of city grime, which a good sandblasting would remove.

The structure is a rectangular one of three storeys plus a high "English" basement, making a total of four storeys in reality. This four story effect is more apparent at the north end, as the ground on which the building is constructed slopes at about a 10 degree angle from south to north. The main facade of the building is on Spring Street, which slopes; the High St. facade is subsidiary, but still ornamental.

The basement, or first floor level, is constructed of finely dressed ashlar masonry in limestone. There is a symmetrical arranging of large and small rectangular windows, but these are completely devoid of any ornamentation. An external division is marked between the first and second floors by a limestone moulding.

The second floor of the building, as well as the other two, is constructed of brick, with stone work offsetting the windows and doors. On the Spring St. side, there are two main doorways, flanked on the outside by two major windows. Between the doorways is a tripartite window. The two doorways rise from the first floor level and extend halfway up the second. Each doorway has a panel of carved stone on either side with a modified acanthus design. The panels and doorway are surmounted by an entablature of stone and this is topped by a semicircular light, inset with stained glass of art nouveau style. The southern doorway has the name "LAGONDA" carved on the entablature. The flanking windows are deeply inset and bordered by stone pilasters of Corinthian design, supporting semicircular lights with stained glass. A fake entablature is created above these windows by the use of mouldings alone. The central tripartite window is completely plain, except for smooth stone facing and mullions. The stone facing is done in square blocks of varying width. The High Street side, lacking an entrance to the second floor, offsets this by a centrally placed window duplicate to the flanking windows on the other side. However, the semicircular light is surrounded and surmounted by richly carved stone panels of acanthus and wreath designs. These create the effect of a miniature Roman Triumphal Arch. This grand conception is flanked by two utterly plain windows, done in the same style as the center window on the Spring St. side. The second floor is separated from the third, like the first, by a stone moulding.

The third floor on Spring St. is dominated by a centrally placed triple-arched portico, almost flush with the surface of the building. The two piers and two pilasters of this portico, as well as the entablature reaching the fourth floor level, are completely covered with the same carving motifs used below. This portico is flanked on the south by a single window and then a double one. The single one illuminates the southern stair-

CHAMBER OF COMMERCE BUILDING

7. con't.

well. On the north, there is but one double window. These have the smooth stone facings of varying width. The High Street side has a plain double window centrally placed. On either side of it are oval or medallion insets, backed with stone, and having applied stone carving of a modified fleur-de-lis design at the top and bottom. Again there is a stone moulding at the point of separation from the fourth floor.

On Spring St., the fourth floor features a central five light bank of windows. On the south end there is a triple window. On the north end there is a single window lighting the northern stairwell and then a triple window. The facings are all smooth dressed stone as before. The High Street side has only a centrally placed bank of five windows. The most interesting part of the fourth floor is that the entire exterior brick work is done in a vast reticulated or net design, using light and darker brick.

Above the fourth floor there is a dentil moulding, ionic freize, almost flat brackets and a crowning moulding all sheathed in metal (probably copper).

Taken as a whole, the exterior of the building produces at least two effects. The two doorways on Spring Street, which even have carved finials on top of the entablature, with their rich carvings give an impression of "Moorisco-Spanish" gothic. The horizontal bulk of the building together with the third floor portico and the flatness of the roof when viewed from below gives the impression of an Italian Renaissance palazzo. The High St. window on the second floor, of course, is but the architect's attempts at combining the Spring Street doorways and portico into a single unit that would serve to ornament a side of the building that had no major entry, but yet faced an important Springfield thoroughfare.

The Lagonda Club Building was designed by the well known architect Frank M. Andrews of the Dayton firm, Williams & Andrews. Constructed of buff-pink brick and Bedford stone, it has sometimes been referred to as "French Renaissance" in design. If anything, it probably owes the majority of its design to Louis Sullivan and his Columbian Exposition "Transportation Building," as well as the whole Beaux Arts school. However, the fourth floor brickwork seems to be in advance of pre-W. W. I Tudor Revival mania which swept Springfield, like other American cities.

STATEMENT OF SIGNIFICANCE

The significance of the Lagonda Club Building lies in two directions; one of architectural values and the other of social values.

In the area of architecture, the building is significant in that it was designed by Frank M. Andrews (1867-1948) who was apparently an early exponent of the Louis Sullivan-Beaux Arts School of Architecture. Andrews is a well recognized American architect, having designed such structures as the Riebold Building and the Dayton City Club (both, Dayton Ohio) as well as the National Cash Register Building in Dayton and the State Capitol buildings for both Kentucky and Montana. At the time of the design and construction of the Lagonda Club Building, Mr. Andrews was related by Marriage to Mr. Oscar T. Martin, one of the founders of the Club, which may have helped him procure the commission. Some years later, in 1909, he renounced this marriage by divorce and remarried, this time, the Broadway actress Pauline Frederick. From 1910 onwards, Mr. Andrews in his biographies in "Who's Who" makes no mention of his Springfield connection. Thus, his designing of the Lagonda Club Building is little known outside of older circles in Springfield.

A second aspect of the Lagonda Club Building is the set of social values for which it stood. Although by its opening in 1895 Springfield had passed its peak, it was still a major manufacturing center of farm implements for the United States. As such, it had a "Society" stratum which itself consisted of two levels. There was still a small core of older pioneers and settlers who had succeeded immensely well in commerce, manufacturing and the professions; at the same time, there was a larger group of the sons of those earlier individuals.

Freed from the anxieties and problems of worldly success, via their fathers' fortunes, this younger "set" experienced the same syndrome as others across the Country in a similar situation. That is, they created a monied aristocracy and, like Englishmen of the period, attempted to withdraw from ordinary society by creating a private world where they would encounter only their own private values. In this perhaps stifling atmosphere, every thought was turned to the physical ornamentation of the building, no doubt for the sake of diver-

8. Significance con't. CHAMBER OF COMMERCE BUILDING

sion as well as symbolic of the exclusiveness of the Club. Enormous sums were spent on red Spanish leather upholstery, with oxidized silver tacks, silver gas and electric fixtures, stained glass, velvet and satin hangings as well as damask draperies -- to mention but a few items. Creature comforts were not lacking and culminated in a vaunted refrigerator which could cool champagne "to a frappé in 20 minutes."

The Lagonda Club opened its doors on the evening of November 7, 1895 to what the Republic-Times called an assembly of "Fair Women and Brave Men." Luxury, alone, however, could not sustain the Club. With the rise of the Springfield Country Club, an inevitable decline set in, due, of course, to changing social patterns as well as the drift of monied people to the north side of Springfield. In 1923, during the days of "Gatsby" and the reaction against Victorian convention, the Lagonda Club closed and was sold to the Springfield Chamber of Commerce. For the next forty years the C of C owned and operated the building, constantly nibbling away at the former elegance. The Grand Staircase and musicians' balcony were removed, the elegant hangings replaced by more mundane venetian blinds and the halls and lounges subdivided into offices and cubicles.

In October, 1963 the Chamber of Commerce moved to the Shawnee Hotel and the building remained vacant for a year, until the Warder Public Library temporarily rented space on the first floor. The building had now been acquired by its present owner, Mr. George Raup. A business college also occupied quarters on the second floor. About 1971 both of these concerns moved and the building stood empty until early in 1974, when Mr. Raup moved his law offices, along with several other professionals, into the building and reactivated the second floor, at the same time leasing the basement, or first floor, to a printing establishment.

Mr. Raup, the owner, has a deep committment to the building and would like to see it restored and flourishing. However, finances are a serious problem. It is his hope that inclusion on the National Register will not only call attention to this landmark architecture, but will also attract new renters, thereby effectively recycling this historic structure, which is virtually intact externally.

UNITED STATES DEPARTMENT OF THE INTERIOR
