Describe the present and original (if known) physical appearance

The Iuka Ravine Historic District is an early 20th century neighborhood in Columbus, Ohio, between Indianola Avenue and North Fourth Street approximately 35 blocks north of the center of town. It contains 53 houses and apartment buildings, most of which are located on the edge of the wooded ravine.

Iuka Avenue breaks the rectilinear grid of streets that surround it as it curves through the ravine. It travels east under two arched neo-classical bridges which carry Indianola and Summit Streets over the ravine and then separates to form Iuka Park in the eastern section of the development.

The brick streets and stone curbs are largely intact although they have been damaged in some places by sewer excavation in recent years.

The bridges are filled arch concrete span structures with sandstone balustrades, abutments and wings cut in a rusticated stone pattern and highly detailed classical moldings. The Indianola Avenue bridge has a sixty five foot span and the Summit Street bridge has a sixty foot span. Stairways lead from the bridges down to the ravine. The bridges originally had ornamented iron lighting standards attached to the balustrades.

The architecture of the ravine is a varied collection of craftsman and early 20th century revival styles. Charles Inscho and Frank L. Packard are two of the well known Columbus architects represented.

The front lots of the houses facing the ravine are generally wooded with ground cover and often have meandering stone steps, walkways and retaining walls that travel down the slope to the road.

The following buildings in the Iuka Ravine Historic District are representative of the quality and diversity of the architecture found there. They are keyed with numbers to the attached district map.

1. 2112 Iuka Avenue (Ca. 1906): This hybrid building has some Dutch Colonial influence, with its partial gambrel roof and flared, wood shingled second floor. The exposed basement and first floor are built of rock faced concrete block. One of the first houses built on Iuka, it is sited closer to the road and park than the other houses, but its turn-of-the-century rustic feeling sets the tone for the area. (Photo 31)
2. 2104 Iuka (Ca. 1914): This house, influenced by the English Cottage style, was built for J. Willis Blue. It has irregular massing around a high spreading gable that takes in the second and third floor. (Photo #25)
3. 2098 Iuka (1914): This Tudor Revival House also has Craftsman influences. It features a brick first floor, stucco and half-timbering on the second floor, grouped casement windows and an open porch with projecting scrolled rafters. The architect was Charles Inscho who designed several houses in the area. (Photo #24)

4. 2076 Iuka (Ca. 1914): This house has English and Craftsman influences. Its most impressive feature is a large octagonal bay that projects out into the wooded front lot. Entirely enclosed in 6/12 leaded casements, it creates a beautiful interior space that looks out over the ravine. (Photo 21)
5. 2044, 2048, 2054 Iuka (1923, 1928): These three apartment buildings were built for Emma Bolin in the 1920s. Designed in the same style, they complement one another and form a cohesive grouping. (Photo #16)
6. 2000 Indianola (Ca. 1910): This Tudor Revival fraternity house appears to have been built for that purpose although it has been greatly enlarged over the years. It faces the southwest corner of Iuka and Indianola, but looks out over the ravine in the rear. (Photo #2)
7. 2032 Iuka (Ca. 1917): Built for Everett M. Stacy, this is one of several houses on the ravine influenced by the English Cottage style. It has a round arched entrance, stopped windows at the stairwell and a gable with flared eaves on the ravine side. (Photo #8)
8. 2058 Indianola (Ca. 1910): This is the first house built by the architect, Charles Inscho as his residence. The interior has much custom work including copper relief panels done by Inscho, personally. It was originally one large lot with formal garden and pond overlooking the ravine. Inscho later subdivided the property and built a more imposing house for himself behind this one, closer to the ravine. (Photo #11)
9. 2047 Iuka (1917): This Tudor Revival residence is probably the most important house in the district. Designed by architect Charles Inscho, it was the second house he built for himself on a large lot overlooking the ravine. In an interesting approach from Indianola Avenue, the entrance is found in a diagonal center section that connects the two opposing wings of the house, forming a broken L-shaped plan. On the other side of the diagonal connector is a terrace on a raised stone base that is an extension of the foundation. Nestled between the two wings, this terrace maintains its privacy, but enjoys a fine view of the wooded ravine. The interior has much fine custom detailing and hand carved mantels. (Photo #13)
10. 2068 Summit and 2093-2101 Iuka (1923): This rambling Tudor Revival apartment building contains several fine apartments, all with wood burning fireplaces. This is a large building of irregular massing and accentuated with half-timbering, projecting gables and prominent chimneys. It is situated on a large lot and is oriented toward Summit Street and Iuka Park. (Photo #20)
11. 2090 Summit Street (1909): Part of a group of four beautifully preserved Craftsman chalets. These houses feature stained siding on the first floor, stucco on second floor, exposed rafters, brackets and fine intact detailing. The rear yards look out over the ravine. (Photo #47)

12. 2090 Summit Street (1909): Part of the same group described in 11. (Photo #47)
13. 2107 Iuka (Ca. 1914): This craftsman semi-bungalow is one of several in the district. Its detailing includes exposed rafters and open porch supported by paired square posts with diagonal bracing on high boulder stone bases. (Photo #29)
14. 2123 Iuka (Ca. 1910): This small lodge was moved here from the Ohio State Fairgrounds in 1906 by William J. Davidson who used it as a residence while his own home was being constructed on adjacent property. (Photo #33)
15. 2132 Iuka (1918): This English Country House is L-shaped with exposed basement on the north side. It has a two story gabled bay window on facade and a brick segmentally arched open porch on the south side. (Photo #34)
16. 2139 Iuka (Ca. 1923): A fine Dutch Colonial Revival house located on a triangular lot where Iuka and Northwood converge at N. Fourth Street. Random coursed stone extends around the first floor. The main entrance has sidelights and fan light transoms. (Photo #37)

The following buildings are considered intrusive to the Iuka Ravine Historic District due to the use of modern construction materials and incompatible styling. Although they are non-conforming it is not felt that they greatly distract from the overall integrity of the district.

1. 2135 Iuka: A three story stone apartment building. (Photo #36)
2. 2127 Iuka: A three story brick apartment building. (Photo #32)
3. 2103 Iuka: A three story brick apartment building. (Photo #27)
4. 2020-2030 Iuka: A two story frame apartment building. (Photo #8)
5. 2016-2018 Iuka: A two story stone and frame apartment building. (Photo #6)

Statement of Significance (in one paragraph)

Criterion C

The Iuka Ravine Historic District was the first development in Columbus, Ohio to take advantage of an existing natural landscape, retaining old forest trees and using curvilinear street patterns. It is significant for its architecture and landscape architecture, the combination of which sets an example for many early 20th century developments in and around the city.

Iuka Avenue is the most important and intact component in a group of curvilinear streets in rolling or ravine-like terrain that travels between North Fourth Street and High Street just east of Ohio State University. Developed in the early twentieth century, these streets are the first break in the otherwise relentless rectilinear grid street pattern that travels north from downtown Columbus.

This area developed as a middle to upper middle class neighborhood with many substantial homes. It was known as the Indianola District, named for Indianola Farm, which encompassed the entire area during much of the nineteenth century. This farm was part of the extensive land holdings of William Neil, who came to Columbus in 1818 and eventually became one of the city's most prominent businessmen.

During the period of 1900–1920, Ohio State University was experiencing its first large stage of growth, with the Oval at the center of campus taking the basic shape and appearance that it has today. It is probable that the proximity to the University as well as the beauty of the terrain were influential in causing the upper middle class nature of the area.

While there were Ohio State University professors who built homes here, they were not in the majority originally. An examination of City Directories of the period shows that the original residents were mainly businessmen and professionals. Several presidents and vice-presidents of various firms as well as doctors, lawyers and architects are listed. There are two fraternity houses on Iuka Ravine that appear to have been built for that purpose around 1910. In the 1920s, 1940s and 1950s the area did become something of an O.S.U. professor's enclave.

Formed from two different real estate additions, Iuka Ravine evolved into its final configuration over a period of about twenty years. There does not appear to have been an initial master plan, and several people had a hand in its development at various times. This makes the result all the more remarkable.

Among the more prominent people who were involved were Eli P. Evans and Edgar P. Kinhead, both Common Pleas Court judges, Robert Thompson, the Franklin County Recorder in the 1890s and William J. Davidson, a business and real estate man.

Page 2

The eastern half of the district between North Fourth Street and Summit Street was platted in 1892 as part of a larger area called the Indianola Summit Addition. This addition was owned and promoted by the Summit Land Company of which Eli P. Evans was president. No houses were built on the ravine until 1906 when William J. Davidson purchased most of the property in the eastern half and built a large house for himself. Now demolished, this house was on a large piece of ground encompassing several lots near the corner of Iuka Avenue and North Fourth Street. As Davidson sold these lots his home eventually became surrounded with the smaller houses that remain today. The rubble stone wall with pylons that surround many of the properties on the north side of the ravine is a remnant from his original property.

The western half of the district between Summit Street and Indianola Avenue was platted in 1906 as the Indianola Forest Addition. The original intention as indicated on the plat map was to mirror the divided avenue and park found in the eastern half. However, this was not carried out since Iuka Avenue runs down the center of the ravine. When the brick roadway was constructed in 1908, the ravine was made shallower by placing its creek bed in a vaulted storm drain under the road.

At this point both halves of the district were cut off from each other since Summit Street was carried across the ravine on a high dirt fill. At the western end of the district Indianola Avenue was broken by the steep ravine banks. This situation was rectified in 1912 when construction began on the two bridges, which unified and defined the ravine development as it exists today.

These beautifully proportioned, segmentally arched bridges are faced with cut sand stone, topped with stone balustrades and classical moldings. The Summit Street bridge was identified as being eligible for the National Register through the Ohio Department of Transportation bridge survey. Both bridges are an essential and integral part of the ravine district. The quality of their material and detailing is the finest in Columbus.

The architecture found on or near the ravine is a fine collection of interesting early, twentieth century residences and apartment buildings, mostly constructed between 1905 and 1920. English revival styles such as Tudor Cottage and Country House are common as well as Dutch Colonial and Craftsman styles. Newspaper accounts from the period indicate that most of the houses were designed by architects. Charles Inscho designed several houses including the exceptional ones for himself. Frank Packard designed the large house at 2096 Iuka for Frank Davis.

As landscape architecture, Iuka Ravine is an example of an existing natural landscape that has been artfully manipulated by manmade works in the tradition of Frederick Law Olmstead. The Indianola bridge on the west forms an entrance from which the ravine slowly reveals itself as the road curves through lush wooded greenery. On either side of the road the ravine rises to the houses above, which are screened by trees and plantings interspersed with a variety of meandering stone steps, garden walls, boulders and wild flowers. After one rounds a curve the Summit Street bridge appears, forming an entrance to the eastern half. Here, the road divides and forms a park, finally ending at North Fourth Street. Isolated by its bridges from the heavy traffic of the north-south streets, Iuka Ravine becomes a separate, hidden environment beneath and behind the surrounding rectilinear streets.

Many of the houses display design characteristics of the early twentieth century English Revival style and the turn-of-the-century Arts and Craft movement in their use of stone, wood, and other natural materials, sloping roof lines, stucco and small paned casement windows. In architecture, layout and landscape the Iuka Ravine Historic District is an intact example of the romantic naturalistic planning of the turn-of-the-century.

B) 17 329025 443030 E) 17 329300 4429940
C) 17 329230 4430050

Mapped, edited, and published by the Geological Survey
Revised in cooperation with State of Ohio agencies
Control by USGS, NOS/NOAA, USCE, and City of Columbus
Topography by photogrammetric methods from aerial
photographs taken 1953; Field checked 1954. Revised 1964
Polyconic projection; 10,000-foot grid ticks based on Ohio coordinate
system, south zone. 1000-meter Universal Transverse
Mercator grid ticks, zone 17, shown in blue. 1927 North
American Datum. To place on the predicted North American
Datum 1983 move the projection lines 3 meters south
and 10 meters west as shown by dashed corner ticks
Fine red dashed lines indicate selected fence and field lines where
generally visible on aerial photographs. This information is unchecked
Red tint indicates areas in which only landmark buildings are shown
Entire area lies within the United States Military District
Land lines based on the Base Line of the United States Military District
There may be private inholdings within the boundaries
of the National or State reservations shown on this map
