Describe the present and original (if known) physical appearance

North High School is composed of a large 3 story block, containing offices, classrooms and an auditorium in the center. At the rear of the main block, on the north side, is a lower wing containing a cafeteria, and a gymnasium with dressing and locker rooms. A boiler room, mainly under ground, projects beyond the rear wing. A small one story addition has been added to the northeast, rear corner of the main building.

In general, the main block has a foundation faced with plain ashlar, topped with a cut stone water table at the sill level of the ground floor windows. The brick walls are finished in Flemish bond. A string course of projecting stone molding travels along the top of the ground floor windows. A second string course of plainer stone forms a continuous sill for the second floor windows. Windows on the main block, in general, are grouped in twos, threes, and fours, with stone surrounds in a quoin pattern. Originally, windows had 6/9 wooden double hung sash. These have been replaced with 6/6 metal double hung sash and a three light transom. While not duplicating the original sash, the new windows do not detract greatly from the over all effect. A stone cornice with a narrow stone frieze projects directly above the third floor windows. Above the cornice, the brick parapet is pierced intermitently with stone balustrading and is decorated with ornamental stone tablets carved with inspirational mottoes. All corners have stone quoins and are topped with stone finials.

The main facade on the south side, has a symmetrical five-part composition. The projecting central pavilion contains main entrances at both ends and holds the main offices on the ground floor, the library on the second floor and a music room on the third floor. Projecting pavilions with blind south faces flank the main facade at the corners. The library windows are higher than the building's typical windows and originally had casements and two square transoms with 9/9/15 leaded glass. The original casements and leaded glass have been replaced with metal sash, but the effect is close to the original. Similarly, the music room windows above are smaller than typical and originally had twenty-one light leaded glass casements. These have been replaced with metal double hung sash. The two main entrances at either end of the central pavilion are recessed in highly ornamented stone tabernacle frames. The pilasters have Renaissance relief carving and capitals ornamented with carved faces. The panel above the cornice is inscribed with mottoes and the composition is topped with stone urns flanking the window above. The arch above the entrance recess has carved, radiating, stone voussoirs, with a coffered intrados. The original double doors have been replaced with inappropriate metal doors.

The east and west facade of the main block are identical, having a symmetrical 5-part composition. The wide center section is recessed and flanked by projecting square stair towers, rising slightly above the parapet, with entrances on the ground floor. The towers are flanked by corner pavilions that project out from the main facade on the south side. The entrances on the towers are slightly less ornamented than those on the main facade. Again, the original wooden doors have been replaced with inappropriate metal ones. These rectangular unrecessed doors are flanked by stone pilasters with relief carving in educational and historical motifs. The entablature also has carved

Page 2

faces and inspirational mottoes. The paired windows above the entrances are topped with stone pediments. The third floor of the south east tower has a copper, glazed oriel which serves as a small classroom greenhouse.

The rear wing, containing a cafeteria on the ground floor and the gymnasium above, is lower than the main block and has square towers at the corners. The decoration is generally the same, except for the windows, most of which are single casements with six lights. The large windows in the gymnasium have been bricked in. A deep basement boiler room rises one story above grade, directly behind the rear wing and has a high brick smoke stack behind it.

The interiors of North High School, in general, are restrained but employ quality materials. The hallways have terrazzo wainscoting that runs down on the floor to flank a center band of buff-colored quarry tile. The stairways are entirely of terrazzo. Classrooms have oak floors and woodwork.

The interior highlights include the auditorium, the library, and the art gallery. The auditorium is entered through glazed, oak double doors with round arched transoms. The lower level has oak paneling on three sides. The upper level, with balcony, has plaster walls and a molded plaster cornice. Original windows of the upper level have been filled in. The original light fixtures remain, but have been supplemented with fluorescent lamps. The proscenium has molded plaster decoration and a fully rigged stagehouse behind.

The library on the second floor has oak entrance doors and molding topped with a broken pediment. The bookshelves are oak with a simple band of decoration running along the top. The ceiling has molded plaster decoration.

One of the most charming interior spaces is the third floor art gallery. Entered through arched, molded plaster openings at both ends, this long, narrow skylighted room has oak wainscoting, a molded picture rail and a molded plaster cornice. The art gallery is right outside of a loft-type classroom studio with north facing diagonal skylights.

The athletic compound is bounded by the building on the west and stretches east along Arcadia Avenue and Glen Echo Ravine to Calumet Street. An oval cinder track is extant as are the floodlights; the football field itself is now simply grass. At the corner of Arcadia and Calumet three sections of wrought iron fencing are strung between four 8 foot high brick columns. This arrangement is repeated at the Arcadia entrance to the stadium. Otherwise, the track is surrounded by chain link fence. The field is slightly below grade level. The stadium is of brick and houses locker rooms below. The top of the stadium is decorated similar to the parapet of the main school building -- intermittent stone balustrades.

On the west side of the building are tennis courts and parking lot.

Specific dates 1922-23 **Builder/Architect** Frank L. Packard

Statement of Significance (in one paragraph)

Criterion C

North High School is an excellent example of Jacobethan Revival architecture, which was very popular for educational buildings in the early part of this century. The interior designs emphasized multiple use of spaces for economy and expanded use by the community in the evening hours. These qualities were espoused by leading school architects of the day (Donovan, 1921). North exhibits the common plan of an auditorium in the center with gymnasium behind or below (Donovan). North High was built in a period of rapid expansion for public high schools in Columbus and across America. The North architectural design took into account the need for space to house "new" high school functions: home economics, industrial arts, science laboratories, music, and art. Particularly noteworthy are the third floor skylighted art gallery and art studio loft. Such inclusions were innovative at the time this building was designed and built. These trends in education gave architects a challenge. Frank L. Packard, architect for North, was praised by John Donovan in his 1921 book, School Architecture, for his contributions in keeping school designs practical and direct even in the face of expanding and complex curriculums (Donovan, p.18).

North High School was probably one of the last major buildings designed by Frank L. Packard, who died in 1923. Packard designed over 200 public school buildings in Ohio. He was one of the most prominent architects in Columbus and central Ohio from the early 1890s until his death. Among the major buildings designed by his firm are the Columbus Savings & Trust building (the Atlas Building) at the corner of Long and High Streets, the Franklin county Memorial Hall (now the Center of Science and Industry), the Broad Street Presbyterian Church, as well as numerous homes for prominent families.

North High School was originally built at the corner of West 4th Street and Dennison Avenue in 1892. In 1920 it had out-grown the building and the present structure was planned. The original building is still in use as the Everett Middle School (named for the man who was the first principal of both the new and old schools). The curriculum of North High School reflected local and national concerns of education. Federal and state governments encouraged the teaching of vocational subjects through legislation and policies such as the Smith-Hughes Vocational Education Act of 1917. The Columbus Board of Education and the Superintendent, Dr. Jacob Collicott, reflected this philosophy in a major building program that began in 1920. The three high schools built during this program, East (1922), North (1923), and Central (1924), were all comprehensive high schools with facilities for commercial and vocational subjects as well as the traditional academic subjects set on several acres of land to provide for the complete education of students

Page 2

including sports facilities. When the new school first opened, for the 1923-24 school year, it represented the forefront of school planning. All up-to-date school functions were provided for. A Home Economics section with a complete housekeeping suite (now removed) was part of the original plan. Industrial Arts, science laboratories, music, art, etc., all had clearly defined areas. During the 1920s through 1940s, North was the largest high school in the city (with 1900 students as of 1950). It tended to dominate the city athletically and was the top college preparatory school with 95% of its graduates going to college by 1950. This dominance declined with changing demographics and the building of newer high schools in the area. Long a center of community life on the north side of Columbus, North High was closed by the Board of Education in 1979 due to shifting priorities in student distribution. It now continues to serve as an adult continuing education center.

Frank Packard was influenced greatly by the English Revival styles in his designs. North High School is a good example of his work in the Jacobethan Revival. Characteristics include red brick trimmed with stone quoins, belt courses and window surrounds, stone balustrade within a brick parapet, richly carved stone entrance surrounds and triple multi-paned windows with transoms. The North schoolgrounds presents a unified stylistic appearance with the brick with stone trim stylistic characteristics repeated in the stadium and fence surrounding the football field and track. Of the major school buildings built during this period North is the only Jacobethan example. East and Central both display Neo-Classical designs.

including sports facilities. When the new school first opened, for the 1923-24 school year, it represented the forefront of school planning. All up-to-date school functions were provided for. A Home Economics section with a complete housekeeping suite (now removed) was part of the original plan. Industrial Arts, science laboratories, music, art, etc., all had clearly defined areas. During the 1920s through 1940s, North was the largest high school in the city (with 1900 students as of 1950). It tended to dominate the city athletically and was the top college preparatory school with 95% of its graduates going to college by 1950. This dominance declined with changing demographics and the building of newer high schools in the area. Long a center of community life on the north side of Columbus, North High was closed by the Board of Education in 1979 due to shifting priorities in student distribution. It now continues to serve as an adult continuing education center.

Frank Packard was influenced greatly by the English Revival styles in his designs. North High School is a good example of his work in the Jacobethan Revival. Characteristics include red brick trimmed with stone quoins, belt courses and window surrounds, stone balustrade within a brick parapet, richly carved stone entrance surrounds and triple multi-paned windows with transoms. The North schoolgrounds presents a unified stylistic appearance with the brick with stone trim stylistic characteristics repeated in the stadium and fence surrounding the football field and track. Of the major school buildings built during this period North is the only Jacobethan example. East and Central both display Neo-Classical designs.

NORTHWEST COLUMBUS QUADRANGLE
OHIO—FRANKLIN CO.
7.5 MINUTE SERIES (TOPOGRAPHIC)

Mapped, edited, and published by the Geological Survey
Revised in cooperation with State of Ohio agencies
Control by U.S.G.S., NOS/DNA, and Columbus Geologic Survey
Topography by photogrammetric methods from aerial photographs
taken 1953. Field checked 1955. Revised 1965.
Polyconic projection. 10,000-foot grid ticks based on Ohio
coordinate system, south zone. 1000-meter Universal Transverse
Mercator grid ticks, zone 17, shown in blue. 1927 North
American Datum. To place on the predicted North American
Datum 1983 move the projection lines 3 meters south and 9
meters west as shown by dashed corner ticks.
Fine red dashed lines indicate selected fence and field lines where
generally visible on aerial photographs. This information is unchecked.
Red tint indicates areas in which only landmark buildings are shown.
Area west of the Scioto River lies within the Virginia Military District.
Area east of the Scioto River lies within the United States Military District.
Land lines based on the Base Line of the United States Military District.
There may be private inholdings within the boundaries of
the National or State reservations shown on this map.
