DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The original section of the Lukens Main Office Building was erected in 1902. The building was built in the mode of a seven bay, 2½ story, T-shaped, hipped roof Georgian mansion with flanking 2-story, 3 bay wings. The 129' by 44' building is constructed of bricks laid in Flemish bond.

There is a center entrance - two leaf doors topped by a faalight. The doorway is sheltered by a flat-roofed Doric portico. The windows of the mansion are 12-over-12 sash with keystone lintels. Modillions punctuate the cornice. On the front facade of the hip roof are three gabled dormers with return cornices and round-headed windows. Two chimneys on each side of the roofline of the main section sets this section from the "wings." At the end of each of the "wings" is a chimney through the hip of the roof.

A 25' by 45' entrance lobby with a wide open-string monumental stair leading to the second floor is the center of the interior. The straight run of stairs stops at a large landing from which left and right steps lead to the second floor. Unpainted oak is used in the lobby as well as most of the major rooms.

In the original section of the building, the seven major office rooms had working fireplaces which added to their "parlor personality." In 1916, an addition of the same size and similar style was added to the rear of the building, making it H-shaped. The construction of the office rooms of the 1916 addition were handled commercially. On the major doors are features such as pulvinated friezes and broken pediments. Mantels have details such as egg and dart, bead and reel, triglyphs, and metopes.

BUILDER/ARCHITECT

**Cope and Stewardson/
Page and Stewardson**

STATEMENT OF SIGNIFICANCE

The Lukens Main Office Building is significant to American architectural history.

The Cope and Stewardson architectural firm designed the Main Office Building and the successor firm of Page and Stewardson designed the 1916 addition of the building. The front section of Lukens Building is of importance as an example of the commercial out-put of a firm famous for stone structures in the "Collegiate Gothic" idiom.

At the turn of the 20th century, the Georgian Revival was important architecturally to a new, more highly developed industrial economy. The Lukens Office Building uses "tried" design elements in new ways. The building yields to new ideas at the same time it simulates a Georgian Mansion -- its use of steel girders and concrete floors with the use of the structure totally for business purposes.
