National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or objects. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

Located along the route of the Northern Central Railway, Bridge 5+92 spans Main Street in the borough of Seven Valleys. This bridge is constructed in the same manner as many of the remaining railroad bridges throughout York County.

This single span girder deck bridge, constructed in 1900, was built to carry a double track way, however, only one set of tracks remain. Its five riveted steel girders rest on straight abutments of large, granite ashlar. The abutments which are stepped, also act as retaining walls for the grading of the railroad and are likely the original abutments from the trestle bridge constructed when the rail line was laid.

The bridge remains in use today through the periodic movement of freight and train excursions. It has remained in good condition with its historic integrity intact.

8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

nationally statewide locally

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Bridge 5+92 is located in the Borough of Seven Valleys and is found on the route of the Northern Central Railway. Constructed in 1900 by the Pennsylvania Railroad Company, it is an example of the riveted girder type of railroad bridges. The Northern Central Railway succeeded in providing a needed link to the large commerce markets in Baltimore and Philadelphia for the merchants and farmers of southern and eastern York County from c. 1840 to c. 1970.

The Northern Central Railway was organized in 1854 through a merger of several shortline railroads including the Baltimore and Susquehanna Railroad. It was the Baltimore and Susquehanna Railroad through the leasing of several lines such as the York and Maryland Line, the York, Wrightsville and Gettysburg Line and the York and Cumberland Line that enabled southern and eastern York County to be linked to the major trade cities of the mid-Atlantic in the mid-nineteenth century. As a result of financial trouble, the Northern Central Railway was bought by the Baltimore and Ohio Railroad. During the monetary panic following the 1860 Presidential election, the company was forced to sell the line. It was purchased by the Pennsylvania Railroad. The Pennsylvania Railroad retained ownership of the line, until its merger with the New York Central Railroad in 1964. After the failure of this portion of the line it was sold to the Department of Transportation and the lease was in turn transferred to the County of York. During the numerous transactions and mergers, this portion of the line has retained the name Northern Central Railway.

This bridge, although comparable in design to the other girder bridges in York County contrasts with them in the manner of construction. Where as the other bridges employ only two steel girders to support the deck, Bridge 5+92 was constructed using five girders. Because the stone abutments may survive from an earlier bridge, the bridge and its abutments reflect at least two periods of railroad construction

The bridge has remained in good condition and has retained much of its historic integrity. The bridge is located on a section of track used periodically for the movement of freight and train excursions.
