

United States Department of the Interior  
National Park ServiceNational Register of Historic Places  
Registration FormRECEIVED  
JAN 29 1991NATIONAL  
REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The shelters at Camp Muir (10,000 feet) are the highest permanent structures in the park. The low profile stone masonry construction of the shelters not only echoes the rocky terrain of the Cowlitz Cleaver but serves as a practical accommodation to the severe environment.

See the attached PNR Inventory Cards for additional information regarding the buildings at Camp Muir.

Significant Person

Architect/Builder

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Camp Muir is significant for its association with recreational development in Mount Rainier National Park (National Register Criterion A). The two masonry shelters comprising the district were built as waystations for the guides and climbers making the difficult ascent to the top of the mountain. Both reflect the philosophy and design features of the Rustic Style of architecture (Criterion C).

See the attached PNR Inventory Cards for additional information regarding the two stone shelters at Camp Muir.

☐ See continuation sheet

Verbal Boundary Description

On the north, the boundary is the edge of the Cowlitz Glacier; on the south, the edge of the Muir Snowfield; on the east, a north-south line 100 feet east of the Public Shelter; and on the west, a north-south line 100 feet west of the Guide Shelter.

☐ See continuation sheet

Boundary Justification

The boundary was drawn to include the significant historic structures and some land encompassing the structures in order to convey the historic setting.

☐ See continuation sheet

Stone masonry, one story, one room, rectangular shelter; rolled asphalt (tar and gravel) flat roof; whole log rafters; stone masonry walls; stone lintels over windows and door; hinged wood door with exterior steel plate on west facade; outline of original door location on south facade; two fixed plexiglass windows with wood frames on south facade; stone-concrete foundation; exposed whole log ceiling joists, "new" board-and-batten sheathing over joists; stucco interior walls (recent mortaring); whole log post and beam interior structural system; wood bunks-platforms; concrete floor.

Built in 1921 by the National Park Service, the design plans for the "Shelter Hut at Camp Muir" were approved by D.R. Hull, Acting Landscape Engineer. Measuring 12' x 25', the shelter was originally constructed as dry-stone rubble 18 inches thick. Mortar has been placed in the joints in certain areas to strengthen the walls. The structure expanded shelter facilities at 10,000-foot Camp Muir for hikers on the mountain and summit-bound climbers. It replaced the smaller, earlier-built shelter that was then set aside as a shelter for guides (see P.053). A plaque with the inscription "Erected in memory of John Muir, 1921" was placed by the original entrance.

13. DESCRIPTION AND BACKGROUND HISTORY INCLUDING CONSTRUCTION DATE(S), PHYSICAL DIMENSIONS, MATERIALS, MAJOR ALTERATIONS, EXISTANT EQUIPMENT, AND IMPORTANT BUILDERS, ARCHITECTS, ENGINEERS, ETC.

Stone masonry, one-story, one room, rectangular shelter; flat tar and gravel roof over plank sheathing and whole log rafters; stone masonry walls with mortar plastered in joints; two small, fixed plexi-glass windows; wood dutch door with exterior steel plate; rubble stone steps lead to door; stone-rubble concrete foundation; exposed ceiling joists; plywood interior finish; plexi-glass skylight; two bunkbeds and kitchen; concrete floor.

The Guide Shelter at Camp Muir was constructed in 1916 as part of a joint agreement between the National Park Service and the Mountaineers. The Mountaineers organized in 1907 and Washington's first permanent climbing club took considerable interest in preserving the wilderness of Mount Rainier National Park. As early as 1910, they advocated the construction of a shelter hut at Camp Muir. But not until after the death of John Muir in 1914 did plans for a shelter move forward as a memorial to the famous naturalist. The plans for the structure were prepared by Seattle architect Carl F. Gould, a member of the Mountaineers. They were endorsed by the soon-to-be first director of the National Park Service, Stephen T. Mather (Thompson, 1981). Interior dimensions were 8' x 20', and 7 1/2' in height. The shelter was constructed of dry-stone rubble walls 2' to 3' thick lined with cement mortar on the inside, had three windows and a door, and a roof of 1 x 12 sheathing covered with three-ply paper (Superintendent's Monthly Report, October, 1916). In 1921, the National Park Service built a larger public shelter at Camp Muir (see P-051);

14. CONDITION

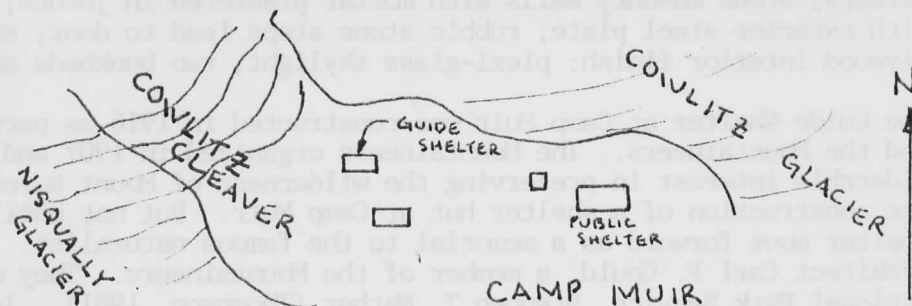

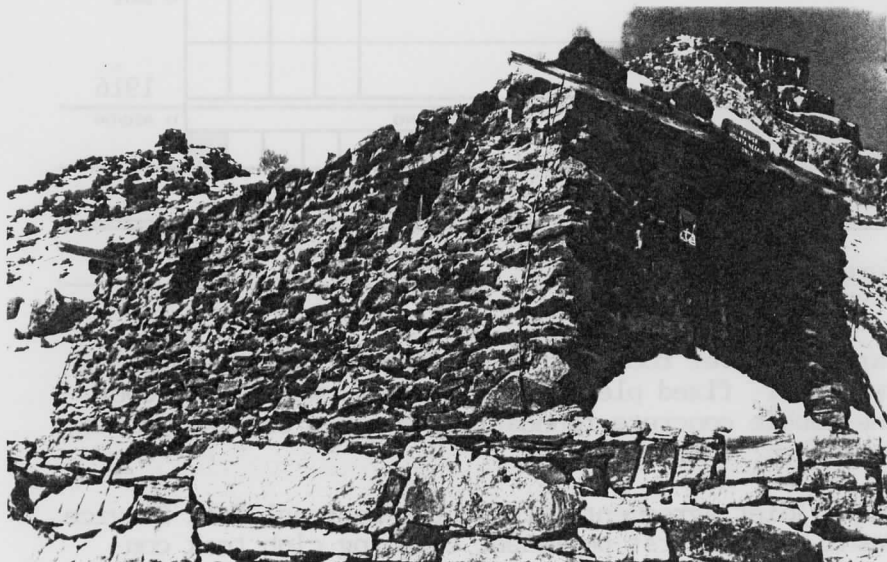

☐ EXCELLENT☒ GOOD☐ FAIR☐ DETERIORATED☐ RUINS15. DANGER OF DEMOLITION?  
(SPECIFY THREAT)☐ YES☐ NO☒ UNKNOWN~~XXXXXXXXXXXX~~

thus, this structure was converted into a shelter for guides. Today, the Rainier Mountaineering, Inc., uses the shelter as housing for its guides. The structure measures 13.5' x 25'.

### Significance

The Guide Shelter is the oldest stone masonry structure in the park. It was constructed to provide shelter at Camp Muir for the increasing number of summit-bound climbers. A joint agreement of construction between the Mountaineers and the National Park Service, the shelter was a memorial to the well-known naturalist, John Muir.

13. DESCRIPTION AND BACKGROUND HISTORY INCLUDING CONSTRUCTION DATE(S), PHYSICAL DIMENSIONS, MATERIALS, MAJOR ALTERATIONS, EXISTANT EQUIPMENT, AND IMPORTANT BUILDERS, ARCHITECTS, ENGINEERS, ETC

Rubble stone masonry, one-story, one-room, rectangular plan, flat roof of wood rafters, built-up composite roofing (new); stone masonry walls (recently tuck pointed); wood door with steel plate on exterior; wood platform floor, unfinished interior walls and ceiling; stone and concrete foundation.

In circa 1936 the CCC constructed two rubble stone masonry pit toilets at Camp Muir. As with the neighboring Guide Shelter and Public Shelter, native stone was used to construct the dry rubble masonry walls. Both pit toilets were identically erected. Measuring 7'-6" by 9'-0", they contained a front door, no windows and a stone parapet wall along the front facade. The toilets were presumably built with wood. The wood rafters for the roofs originally were comprised of whole logs. A 1962 building survey indicated that the two pit toilets, in fair condition had undergone some minor changes. No door existed on the mens toilet (PX-302) and 2x4 rafters had been installed in place of whole logs. The womens room (PX-303) still retained most of its original elements. Photos taken at the time of the survey, document the existence of rubble masonry walls screening both entrances. During the mid-seventies a report on the Camp Muir waste disposal facilities stated that the old pit toilets were inadequate for the increasing demands being placed upon them. New fiberglass units subsequently replaced the pit toilets. PX-303 was removed and the NPS converted PX-302 to a storage shed. The stone masonry wall screening the entrance to PX-302 was also removed. The surviving former pit toilet is

---------------	------------------------------------	------------------------------------------	-------------------------------	---------------------------------------	--------------------------------	--------------------------------------------	------------------------------	-----------------------------	---------------------------------------------

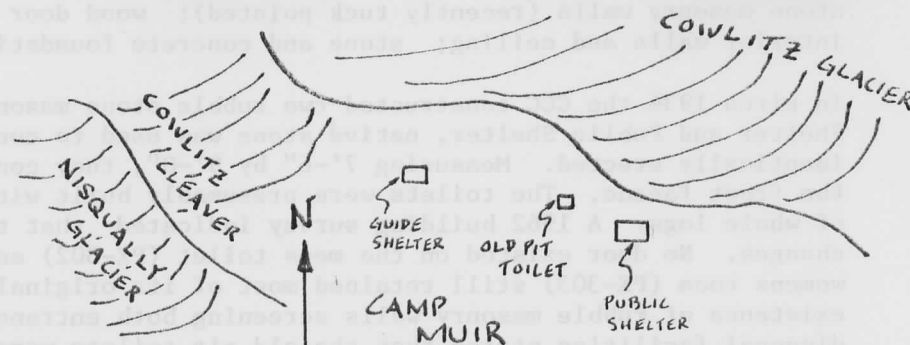

presently in good condition.

## 16. SIGNIFICANCE

The old surviving pit toilet at Camp Muir, now used as a storage shed, is an outstanding example of CCC construction. PX-302 is significant in the history of the development of Camp Muir beginning with the construction of the Guide Shelter in 1916. At the time of the completion of the two pit toilets, four rubble masonry buildings were comprised the high altitude camp. Although PX-302 has been greatly altered it still retains its original rubble masonry walls.
