June 24, 91

Dear Brian:

Many thanks for the reprints you
sent for American article. I had
already read it with both profit and
pleasure.

Sincerely

Alan Bromley

THE WHITE HOUSE
WASHINGTON

December 18, 1991

Dear George:

Congratulations are indeed in order for your leadership in developing Metrotech and I am happy to do what I can to persuade the President to be the main speaker at the celebration on Thursday, May 28.

You and your associates can indeed be proud of what you have accomplished and Metrotech serves as a model for the urban centers of all of our great cities today.

The President's speaking schedule is never finalized until about six weeks prior to the actual event as I am sure you will understand, but having the request in the files at an early point certainly helps. So having your letter and that of Joe Jacobs on hand now is certainly a move in the right direction. What I shall do is follow up with a memorandum to the head of the scheduling office, Ms. Kathy Super, and at a later time will talk to the President himself about the occasion.

In the meantime, let me take this occasion to wish you and your family a very merry Christmas and the happiest, healthiest and most rewarding of New Years.

With warm regards,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "Allan", with a stylized, flowing script.

D. Allan Bromley
The Assistant to the President
for
Science and Technology

P.S. The Padua student hat is a major addition to my academic garb
and I am very much indebted to you for it.

A handwritten signature in dark ink, appearing to be 'G. Bugliarello', written in a cursive style.

MEMORANDUM FOR KATHERINE L. SUPER

FROM: D. ALLAN BROMLEY

Alan

SUBJECT: POLYTECHNIC UNIVERSITY REQUEST

The attached letter to the President from George Bugliarello, the President of the Polytechnic University of New York, is self-explanatory and I realize that you will not be scheduling for May until much closer to the actual event.

I have had an opportunity to see this Metrotech development in New York and I believe that its dedication would provide an excellent opportunity for the President to make a major address relating to science and technology, and to its role in revitalizing urban economies.

I will be happy to provide any additional information that I might have that would be useful to you in considering this request. If at all possible I would urge you to try to include it among the major talks scheduled for the President during this coming summer.

Dear Mr. Blume:

Thank you very much for your letter describing the activities of the Society of Elementary Presidential Awardees. It is very gratifying to know that those singled out by the award are continuing to demonstrate their leadership, in part by pooling their expertise and enthusiasm in mathematics and science education. That is one of the major reasons why the award was created.

I am afraid that I will not be able to write a separate essay to be included in your December newsletter. However, I will include with this letter the text of the remarks I delivered at the Carnegie Institution. You may publish any portion of those remarks that you deem appropriate.

Sincerely,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D." being small and the last name "Bromley" being larger and more prominent.

Dr. D. Allan Bromley
Science Advisor to the President
The White House
Washington, DC 20500

OFFICE OF THE
DIRECTOR

Dear Dr. Bromley:

It was a pleasure meeting you at the Presidential Awards Ceremony in Washington, D.C. earlier this month. As president of the Society of Elementary Presidential Awardees, I speak for all elementary mathematics and science teachers when I say that we appreciate that elementary teachers are being recognized for their contributions to the education of this nation's youth. We accept the honor that accompanies the Presidential Awards for Excellence in Science and Mathematics Teaching graciously; but, more importantly, we accept the responsibility to take a leadership role in educating children for life in an increasingly scientific and technological world.

As a result of the Presidential Awards program, we have already taken actions to fulfill this responsibility. During the past year, the Society of Presidential Awardees has become an operating organization with constitution and officers. In its short history, the organization has provided input into national educational reform efforts. Members of the organization contributed to a National Science Foundation-sponsored conference in which members met with NSF program officers to discuss how Presidential Awardees can take leadership roles to promote national education reform. In addition, members participated in the National Summit for Mathematics Assessment last April. Members are also involved in the Mathematical Sciences Education Leadership Network, a computer conferencing network designed to support the mathematics reform efforts of key mathematics organizations. We plan to continue our efforts in these and other areas.

We thought you might be interested in the actions we have taken and thought you might like an opportunity to address the elementary Presidential Awardees of the importance of their efforts in providing leadership in educational reform. We would be honored if you would take the time to write an essay to be included in the December organization newsletter.

Sincerely,

Stephen C. Blume, President
Society of Elementary Presidential Awardees

Dear Dr. Barr:

Thank you for your letter of August 6 which arrived while I was out of the country. In it you tell me of your invitation to President Bush to speak at your conference next year scheduled to take place in San Francisco, February 25-27.

The scheduling is such that, although the invitation will be in the scheduling mill, you will not receive any concrete answer until between six weeks and two months prior to the event. I will, however, be happy to talk with the individual who is in charge of scheduling such Presidential appearances and add my suggestion that this would be an excellent occasion to speak concerning the Presidential initiative on high performance computing and communication.

With all best wishes,

Sincerely yours,

Washington, D.C. 20506

Dear Dr. Bromley:

As the chairman of the 1992 IEEE COMPCON Conference Technical Program Committee, I have asked President Bush if he would consider being a keynote speaker for the conference. As the President's science advisor, I would like to ask your help with our request.

As stated in our letter to the President and as you may know, COMPCON is the IEEE Computer Society's annual conference and it draws a good mix of computer scientists from both industry and academia with considerable international attendance. We have had special sessions on the High Performance Computing Initiative in the past, and will have a session this year concerning the Grand Challenges and the Federal High Performance Computing and Communications program led by Dr. Paul Huray from the University of South Carolina.

It would be of great benefit for the IEEE Computer Society to have President Bush as a keynote speaker at next years conference. The IEEE Computer Society is a supporter of HPCC and many of the presenters and attendees will be members of the industrial and research community associated with high performance computing and communications. I have been told that you have participated in past COMPCON conferences. Your support this year will be appreciated

Please have someone contact me if you have any questions regarding the conference. My electronic mail address is barr@mot.com if that is more convenient.

Sincerely yours,

John R. Barr, Ph.D.
Manager, Software Systems Research Laboratory
(708) 576-8706

cc: Dr. Paul Huray

MOTOROLA INC.

August 6, 1991

Honorable George Bush
President, United States of America
1600 Pennsylvania Avenue
Washington, D.C. 20506

Dear Mr. President:

On behalf of the IEEE COMPCON '92 program committee I would like to invite you to be a special keynote speaker at next years conference which is scheduled to take place in San Francisco, California, Feb. 25 - 27, 1992. Should you accept, your keynote address can be scheduled for any day of the conference. Given the demands on your schedule, we would be flexible with the time of your presentation.

Our keynote speeches are normally one hour in duration in a morning session from 8:30 - 10:30 AM. On Wednesday mornings, we only have one keynote speaker followed by an IEEE Computer Society Awards Ceremony honoring key contributors and pioneers of the IEEE Computer Society. These awards are presented by the president of the IEEE Computer Society.

COMPCON is the IEEE Computer Society's annual conference and it draws a good mix of computer scientists from both industry and academia with considerable international attendance. It is a technical conference, not an exhibit. Attendance varies from 800-1200 people. Topics will include high-performance computing systems, multi-media systems, and the latest technological advances in microprocessors and workstations.

We are open to hear you speak on any topic you choose. We are interested in your reflections on learning how to utilize a computer or your view of the impact of the "Federal High Performance Computing and Communications (HPCC) Program on the United States' research and industrial communities as well as on education.

Please have someone contact me if you have any questions regarding the conference. My electronic mail address is barr@mot.com if that is more convenient.

Sincerely yours,

John R. Barr, Ph.D.
Manager, Software Systems Research Laboratory

Dear Dr. Bromley:

I am pleased to invite you or your representative to attend the U.S. General Accounting Office's conference on U.S. Communications Policy: Issues for the 1990s. The one-day meeting will be held Monday, February 11, 1991, from 8:00 a.m. to 5:30 p.m. at the ANA-Westin Hotel in Washington, D.C.

The purpose of the conference is to provide a forum for high level congressional, government, industry, and academic representatives to explore and debate critical communications policy issues. The conference will be composed of four roundtable discussions, each of which will address a separate policy issue. We hope to use the results of these discussions to determine the course of future research and ultimately to assist policymakers in developing a communications policy framework for the next decade. Enclosed is a brochure that provides additional detail on the specific policy issues to be discussed and the conference format, as well as a list of the invited panelists.

We have invited Congressman Edward J. Markey, Chairman, Telecommunications and Finance Subcommittee, House Committee on Energy and Commerce, as our luncheon speaker. As subcommittee chairman, Congressman Markey presides over interstate and foreign communications, including all telecommunications and information transmission by wire, microwave, and satellite.

A \$50 registration fee is required to cover meeting costs, including the luncheon and refreshments. Space for this conference is limited, and is available on a first-come, first-served basis. If you wish to attend, please return the enclosed registration form in the envelope provided, or

Dear Dr. Bromley:

I am writing to invite you to speak at our Conference for Government Executives entitled "Seminar on Issues in Science and Technology Policy," which will be held in Colonial Williamsburg, Virginia, March 3-8, 1991.

These seminars bring together 30-40 top government scientists to examine the role of science and technology in shaping public policy; to review current scientific developments in such fields as biotechnology, information technology and space; and to analyze current science and technology policy issues faced by the Administration and the Congress.

We would be delighted if you could meet with the group on Thursday evening, March 7, on the topic "Science and Technology Policy Priorities of the Bush Administration," in the North Room which is located in the Cascades Conference Center. The evening would begin with a reception at 6:30 p.m., followed by dinner, your presentation of 20-30 minutes, and open discussion until around 9:00 p.m. Brookings will, of course, cover your travel and hotel expenses. If this time is not convenient, other times during the week are possible.

If you are able to accept this invitation, I will be happy to provide additional details regarding the seminar. I look forward to hearing from you and hope very much that you will be able to speak at the seminar.

DIRECTOR

Dr. D. Allen Bromley
Assistant to the President for Science & Technology
Office of Science and Technology Policy
New Executive Office Building
Washington, D.C. 20506

28 February, 1991

Dear Dr. Bromley;

The Massachusetts Institute of Technology's Center for Global Change Science is planning to host a symposium entitled "*The World At Risk: Natural Hazards and Climate Change*." The objective of the symposium will be to highlight and discuss the possible implications of climate change on natural hazards. The desire to emphasize the link between climate change and natural hazards arises from the declaration, by the U.S. National Academy of Sciences and the United Nations, of the 1990's as the International Decade for Natural Hazard Reduction. Topics of the symposium will include outlining strategies for prediction, prevention and adaptation, as well as the response of both engineering and governments to the changing forces of nature.

We would be honored if you would attend the symposium, and present a lecture, tentatively entitled "Challenges of the Decade: Natural Hazards and Climate Change." The two-day symposium is scheduled for the week of January 13-17, 1992, and will be held at facilities on the MIT campus. A proposal for sponsorship has been submitted to the National Science Foundation. At this time we would like an indication of your interest in participating in the symposium.

If you would like more information about the planned symposium, or the MIT Center for Global Change Science, please do not hesitate to contact either Anne Slinn, the Center's Administrative Scientist (Phone: 617-253-4902, Fax: 617-253-0354), or myself (Phone: 617-253-2117). For your interest, please find attached a preliminary symposium schedule, and a list of the invited (but not yet confirmed) speakers.

We look forward to hearing from you.

Sincerely,

Prof. Rafael Bras
Associate Director,
MIT Center for Global Change Science

THE WHITE HOUSE
WASHINGTON

December 19, 1991

Dear Joe:

Warmest congratulations on your appointment as managing partner of the Washington, D.C. office of KPMG Peat Marwick! This is a major responsibility that I know you will handle with both style and effectiveness based on the more than 20 years that we worked together on the affairs of UNC Incorporated.

I have had only tangential contact with the UNC Board since my arrival in Washington but the impression I get is that Dan Colossy has finally turned into a successful company by shearing off many of the difficult subsidiaries.

Please give me best regards to David Fowler on his retirement from your firm. It was a pleasure getting to know and work with him over the years as well. I gather that Steve Harlan is now in New York and hope that all goes well for him.

Let me take this occasion to wish you a very merry Christmas and may 1992 be a very happy, healthy and rewarding year for all of the Boyles.

Sincerely yours,

D. Allan Bromley

Dear Dr. Brill:

Thank you very much for your invitation to write an article on creativity for Productivity and Creativity -- in science and technology. Creativity in science is a tremendously important subject and one that has too often been overlooked. But given the number of commitments on my schedule -- particularly as we head into a new budget cycle and an election year -- it is going to be impossible for me to prepare an article for your newsletter. I wish you the best of luck with it and hope you meet with great success.

Sincerely,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

Dear Betty:

Many thanks for providing me with the additional information that I had requested on the Fort St. Vrain and Peace Bottom power plants. This is precisely what I required and has been extremely helpful.

It was good to see you and your associates again and I look forward to working with you.

In the meantime, warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Rich:

Many thanks for sending me the copy of the Compendium of U.S. Science and Technology Activities in Developing Countries. This is an enormous useful report and i am glad that it was prepared under the Ciset/FCCSET Committee.

I want also to respond to your letter of November 14 concerning the CFCs and their future in India. I quite agree with you that negotiations with the Government of India are extremely delicate and the outcome can never be predicted with any certainty.

I was very much interested in your suggestion that the private sector in India to be utilized to address the CFC problem because in the light of the most recent scientific discoveries the CFCs take on much renewed importance as a consequence of their destruction of ozone, although to the great surprise of just about everyone in the global climate change arena, it seems that the greenhouse impact of the CFCs--gases that used to be considered the most powerful of the greenhouse arsenal--is essentially zero.

I would enthusiastically support your initiative to use the private sector to get discussions under way with respect to minimizing the use of CFCs in India in the future. I found the summary of your conference to be a very interesting one and will be prepared to help in any way I can in furthering your suggested approach.

I believe that you are very much on the right track here and do let me know when and how I can be of help.

With all best wishes,

Sincerely yours,

Washington, D.C. 20506

Dear Dr. Bromley: 

I am pleased to enclose a final copy of the Compendium of U.S. Science and Technology Activities in Developing Countries. A draft was distributed and approved at the 17 September meeting of the Committee on International Science, Engineering and Technology (CISSET).

The Compendium was compiled under the auspices of the CISSET Subcommittee on Science and Technology in Developing Economies (SATIDE), with the active participation of 13 federal agencies and departments. The document provides a comprehensive overview of the diverse range of federally supported scientific programs and projects in developing countries.

In providing baseline data, the Compendium will contribute significantly to an examination of the United States' future priorities for science and technology in the developing world. As this will be an evolving process, the tools have been developed to update the Compendium annually if the market demands.

To facilitate use of the Compendium, each activity is cross-referenced to a list of key words and the name and phone number of the appropriate contact person for that activity. In addition to key words, data can be extracted by agency, sector, country, or region.

Additional copies of the Compendium will be available within a few weeks from the National Technical Information Service, Department of Commerce.

Sincerely,

Richard E. Bissell
Assistant Administrator for
Research and Development
Chair, SATIDE

Dear Dr. Block:

Many thanks for sending me the copy of the September 1991 issue of SIAM News, featuring ICIAM 91. I enjoyed having the opportunity to meet with your group and again would congratulate you for the leadership that you have provided in the entire educational arena in terms of developing standards, performance assessment techniques, and elements of new curricula. All of these are vitally important and the mathematics community has taken a very real leadership position.

With warmest best wishes,

Sincerely yours,

Dear Lew:

It was a pleasure talking with you and David Robinson about your report on the Federal role in math and science education and I want to thank you for your own personal commitment and contribution to the ongoing discussion of improved math and science education in this country.

I completely agree with you that a key element of our future activity must involve a clear establishment of the relative roles of the National Science Foundation and the Department of Education. This is something that we are actively working on at the present time but, as you appreciate only too well, there are some intrinsic problems that are extremely difficult to resolve. Your report is of major help to us in our activities in the education field and I congratulate you upon it.

I shall send you a copy of the report turned out by the FCCSET Committee on Mathematics and Science Education to accompany this year's budget submission to the Congress as soon as it becomes available. I think that you will find it of interest and perhaps a significant improvement over our first effort a year ago.

With warmest best wishes for all the best in the upcoming New Year,

Sincerely yours,

D. Allan Bromley

Dear Wayne:

It seems almost impossible to believe that you are even considering retirement and I must say at the outset that I have the distinct impression that you are of the type that almost immediately flunks retirement in any event.

I recognize that this must have been a tough decision for you and I hope that we can look to you for help from time to time as things evolve in our treatment of technology here in OSTP.

In the meantime, let me wish you and Dottie a very long, happy, and healthy retirement with success and happiness in whatever you do.

With all best wishes,

Sincerely yours,

Old Executive Office Building
Washington, D.C. 20506

Dear Allan,

After almost thirty years at the Research Center, ten of which have been spent as Director of Research, I have made the decision to take early retirement effective March 31, 1992.

I will continue in my current position through the end of 1991 leading the day-to-day activities of the Research Center and insuring that a smooth transition is made to my successor's becoming Director on January 1. From then until the end of March, I plan to work out of the Research Center to complete a variety of activities for which I have made commitments and to carry out several special assignments for the UTC Corporate Office of Science and Technology.

My plans beyond March are still in a formative stage, but I will be spending more time with my family and will begin to do some of those "nice-to-do-someday" projects we all dream of. I plan to remain professionally active and expect to do some consulting and special project work in the areas of my expertise.

This was a tough decision. The Research Center has been such an important part of my life -- not only because of the technical and leadership challenges, but also because of the people who have been very special to me. But after long and careful thought, it became clear that no time is the right time. Both my wife, Dottie, and I are looking forward to this "commencement" and to a continuing association with the many friends we have developed at UTC, UTRC and through my professional affiliations.

Thanks for your friendship and for helping make my years at the Research Center and my chosen career such a rewarding experience.

Very truly yours,

UNITED TECHNOLOGIES CORPORATION
United Technologies Research Center

October 21, 1991

Dear Mr. Barks:

Thank you for your letter of September 16 inviting me to serve on a panel discussion at the January 9, 1992 meeting of the American Ceramic Society, scheduled to be held in Cocoa Beach, Florida. My apologies for the much belated response.

As you can appreciate, the number of invitations I receive that entail traveling out of town is overwhelming and I am finding that I cannot be away from Washington as much as I would like. As much as I would like to join you and your colleagues, the next several months are already heavily committed, so I must regretfully decline.

I appreciate your thinking of me and would like to offer my best wishes for meeting,

Sincerely yours,

OFFICE OF THE
DIRECTOR

Dr. Allan Bromley Assistant to the President and
Director of the Office of Science and Technology
The White House
Washington, DC 20500

Dear Dr. Bromley:

Your central role in the establishment, via the Defense Authorization Act of FY 1991, of the National Critical Technologies Panel and the Subcommittee on Materials is an excellent example of the dynamic interplay of Congress and the Executive Branch with regards to technology. It is of considerable interest to those of us in the ceramic industry in the United States. On behalf of the Engineering Ceramics Division (ECD), American Ceramic Society (ACerS), I would like to invite you to serve on a panel discussion, The Legislative and Policy Bases of Technology at our annual Division Meeting in Cocoa Beach, Florida, Thursday, January 9, 1992 from 4:30 - 6:30 p.m. at the Cocoa Beach Holiday Inn.

This will be the Fifth Annual Meeting in our Business of Technology Panel series. These panels are attended by approximately 400 to 450 individuals representing university and federal laboratories plus marketing, research, manufacturing and sales personnel from industry. In addition to members from the ECD, we expect members of the United States Advanced Ceramics Association (USACA), a trade association, and leaders from student branches of the National Institute of Ceramic Engineers from approximately 40 universities. This would represent a wonderful opportunity for us to learn first hand how the policy process functions. If you can not personally attend, we would welcome your recommendation of an alternate.

We are, of course, prepared to pay your travel and lodging expenses. For planning purposes you should know that the other panel discussions will lead directly into the cocktail hour preceding the Conference Banquet. This time will provide additional opportunities to converse with interested attendees.

Your involvement in materials is of considerable importance to all of us in the ceramics community. We hope that you will be able to participate in this panel

I look forward to hearing from you.

Sincerely,

Ronald E. Barks
Director
Industrial Applications Office
Councilor
Engineering Ceramics Division
American Ceramic Society

Dear Dr. Bromley,

It was a pleasure to meet you at dinner last Thursday. I have heard so many wonderful things about you and the important impact you are having on S&T.

Dr. Herzfeld has asked me to work with him on the PCAST Panel on National Security. I am finding this to be a very interesting effort and hope I can contribute in some small way.

As is the custom for such dinners, I have totalled our dinner bill and divided by the total number of people. This computes to fifty dollars a person.

I look forward to seeing you again.

Sincerely yours,

SAFETY PAPER

THE WHITE HOUSE

WASHINGTON

September 20, 1991

Dear Laney:

You asked some rather difficult questions, but let me try to give you at least a few brief answers.

Perhaps the most important thing to keep in mind, with respect to your college career, is to keep as many as your options open as possible for as long as possible. Too many people by far narrow their focus much too early in their academic career. With the excellent record that you have already established, it is clear that you can do just about anything that you may wish to in the years ahead and so you should look on college as preparing you for a broad range of possible career paths rather than from any very specific one. From the sound of things, your interests lie in the technical areas with a strong language and perhaps international flavor as well. This, of course, is an excellent total area and one with exciting career possibilities.

Although it may be hard for you to recognize it at the present time, if you are to open fully the possible range of careers, particularly those having a scientific and mathematical component at their core, it will be desirable for you to think in terms of an eventual doctorate in one of the fields.

Although you may wish to mix science, mathematics, and international affairs, it is very definitely the case that you should begin by getting a deep understanding of one of those areas and then moving to add others at a later time. That being the case, it is also very true that your focus initially should be on the science and mathematics because it is much easier to add the foreign languages and the international affairs to a strong foundation in mathematics and science than the other way around.

What I would then suggest would be an undergraduate program that had strong mathematics and science, possibly a science or mathematics major with the choice between them being relatively unimportant. Plus a strong minor in one or more foreign languages with a strong measure of English, history, and perhaps a little political science thrown in. I cannot emphasize how important it is to take advantage of a broad range of activities in your undergraduate program with the focusing occurring in subsequent graduate work. My own preference, of course, would be for a doctorate program in one of the sciences because you then would be preparing yourself either for a career with one of the multinational companies, an area in this society that will be growing rapidly in the years, or in international affairs at the government level, where again, science and technology are, without question, going to play an ever increasingly important role.

You ask then about what schools would be best suited to the kinds of program that you have in mind. Fundamentally, your choices between a college of the Haverford, Swarthmore, Reed variety where you can expect more individualized faculty attention unfortunately, do not have the facilities and experience of the faculty that you would encounter at a major research university. I would suggest a research university because of the greater spectrum of course offerings and the, in general, greater experience and visibility of the faculty unless you feel that you want the more individualized interaction with the faculty that characterizes someplace like Smith if you want an all female environment, or Swarthmore or Haverford or Reed, or one of those similar colleges if you are interested in a co-ed environment. With your background, I would think that it would be entirely reasonable for you to shoot for some place like Princeton, Harvard, Stanford, or Yale, and I would urge one of those on you because of the very real quality that you would expect to find in the faculty and among the researchers with whom you would interact. I would not suggest MIT or CalTech because their focus, I sense, is narrower than what you have in mind.

I would emphasize that in any of the universities that I have suggested it is possible for someone with your record to build essentially a program that is specifically suited to your own wishes and abilities, and there is tremendous flexibility in terms of keeping options open and yet really obtaining a deep understanding of one or more areas of focus. Each of the ones that I have suggested have special attractions in terms of structure, location, student body character, and what-have-you, but you make no mistake in selecting any one of them.

It is worth remembering that Yale is in many ways unique in the entire Nation, with only Rice University in Houston, Texas, coming even close, in that through the structure at Yale you have at one in the same time the social ambiance of the smaller college and yet the resources of a major research university. To the extent that it works, and I believe that it does, Yale is unique in offering you the best of both worlds.

Let me also emphasize that you should not be turned off by the somewhat astronomical tuition and other expenses associated with the universities that I have just mentioned because it is, in fact, the case that all of those universities admit students without reference to their family's ability to pay the stated costs and the universities come up with whatever might be required to augment your family resources and make it possible for you to attend once they have accepted you as a member of the freshman class. I would therefore urge you to try for admission at whatever university or college really appeals to you and, in that sense, it is very important for you to visit at least the ones on the east coast that are in convenient range, to get some sense of the campus atmosphere, the student body, and the general feeling of the place.

If you have some specific questions as you get more closely into the college admission process, then give me a call 202/456-7116 and I would be happy to discuss them with you.

With all best wishes, both to you and to your parents,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D." being small and the last name "Bromley" being larger and more prominent.

D. Allan Bromley
The Assistant to the President

Science and Technology

Ms. Laney Baris
Maiden Lane
Durham, Connecticut 06422

Sept. 2, 1991

Dear Dr. Bromley,

Thank you for taking the time to write to me. It's so nice of you to congratulate me.

I would like to ask you a few questions, about my options after high school. Could you please suggest some colleges with strong science, mathematics, and foreign language departments?

Also, could you suggest some career options that would encompass these subjects? I would be most grateful if you could answer these questions.

Sincerely,
Daneel Barrio

Sept. 17, 1991

Dear George:

Many, many thanks for the Radon physics student hat. I shall both treasure and use it ~ having much a dined years!

It was a great pleasure to see you and Mrs. Sapliarello yesterday and

let me also thank you for your services on the Medal selection committee.

With warmest best wishes

Sincerely yours
Alan

Dear Allan,

You will recall that the Evans committee on Policy
Implications of Global Warming encompassed a panel on
Adaptation. I am chairman.

The Adaptation report was released on Friday with subsequent
notice in the papers typified by the attached story from the
New York Times.

Also I attach the Preface, Findings and Recommendations of
the report itself. My reason for attaching the Preface is
to show my obituary to Roger Revelle.

Should you or your people want to know more, I am at your
service,

Paul E. Waggoner

Michael
Bosher

Office of Science and Technology
Old Executive Office Bldg, Suite 358
17th and Pennsylvania Avenue, N.W.
Washington, D.C. 20506

Dear Allan,

I was disappointed not to see you at our Physics Computing '91 conference in San Jose. The meeting went very well and Gene Wong did an excellent job as keynote speaker.

The principle reason for writing is to solicit your help and advice. I have decided that eight years of running the Computation organization at Lawrence Livermore National Laboratory is plenty, especially after the last three years. While I have several options here, I would like to get away from LLNL for a while, if possible.

I am very interested in the High Performance Computing and Communications Initiative. Not surprisingly, I have extensive connections to the high performance computing and networking world; i.e., government, academic and US and foreign industry. Potentially a Washington assignment would be a good use for my knowledge of the field and my contacts.

Depending on how you are organizing OSTP in the HPCC area, is there a possible assignment for me? One of the participating agencies would also be a possibility. Any advice you have would be most welcome.

Best regards.

Sincerely,

Robert R. Borchers
Associate Director
for Computation

Dear Allan,

I enclose a copy of the final report of the Task Force on Education of the Carnegie Commission on Science, Technology and Government. This report has been substantially changed since the last draft I gave Tom Ratchford, and is now completed. It was reviewed and has been approved by the Carnegie Commission for publication and public release.

Prior to final publication, which we expect to accomplish in September, I would be very pleased to brief the report to you and others you may designate and to benefit from your views on our recommendations. When might this be convenient?

Our assignment was to address the federal role in K-12 grade mathematics and science education, and to make constructive suggestions on organization and decision-making processes that might enhance the effectiveness of federal participation in the national effort at educational improvement. Policy and management issues cannot be addressed, of course, without identifying some of the the priority programmatic issues. We have highlighted these issues both to call attention to them and to provide the logical justification for organizational recommendations.

The members of the Task Force, its Advisory Committee, and the Carnegie Commission, are very highly motivated, as you are, to see the nation move with speed, imagination, and determination to remedy what many see as the most serious threat to the long-term well-being of the American people: the weaknesses in our system of universal education. We see your leadership as offering an extraordinary opportunity for a sea-change in government leadership and public support for educational progress.

I am also sharing this pre-publication copy and offering personal briefings to Lamar Alexander, Jim Watkins, and Walter Massey.

Sincerely,

cc: David Hamburg

July 31, 1991

Dear Dr. Burger:

Many thanks for sending me the copy of *Daedalus* devoted to risk analysis and management. As a long-time Fellow of the American Academy, I had already read a substantial part of the volume and agree with you completely that it is a very useful and perceptive treatment of the whole risk question.

I have been pleased thus far with the activities of the Committee chaired by Dr. Henry Habicht, the Deputy Administrator of EPA, that I have set up under the Federal Coordinating Council to try to develop consensus among the Federal agencies on the basic principles and approaches that will be used in the Federal Government in matters of risk assessment and management. I think the time is long overdue when it needs to be recognized that this field has developed into a science in its own right.

Obviously, your Institute is one that will be maintaining a keen interest in this whole matter and we will always welcome input from you.

With all best wishes,

Sincerely yours,

Dear Dr. Bromley:

I happened to have been in the audience last week during your remarks to the meeting on Risk, sponsored by the International Life Sciences Institute. It occurred to me that, if you hadn't seen it, you might enjoy the enclosed volume of Daedalus which we initiated and developed with the American Academy of Arts and Sciences. The aim of the effort was to take a somewhat broader view of how the Nation views risk and risk-taking, the cultural and economic factors which have brought us to the present posture, and the capacity of our public and private institutions to accommodate our views and behavior.

Sincerely,

EJB/tb

Edward J. Burger, Jr., M.D., Sc.D.

ENCL

THE WHITE HOUSE

WASHINGTON

July 31, 1991

Dear Gary:

I am somewhat torn by your news that you are heading off to become Dean of the School of Natural Resources at the University of Michigan. On the positive side, I know that you will do a superb job, as always, and the University of Michigan is a very distinguished one that I know quite well. On the negative side, you will be greatly missed at Yale.

I reluctantly must agree with you that the general atmosphere in New Haven is deteriorating and deteriorating rapidly. I notice this perhaps most because I only come to the city now at several month intervals and during those intervals the decay is very evident. I also have the additional indicator of an attractive home that I have been trying to sell now for over two years and despite the fact that there have been many interested potential buyers, none of them have been able to obtain mortgage support and since I am not in a philanthropic mood, I have the dubious pleasure of supporting a home in New Haven as well as one in Bethesda. This does beat the hell out of my exchequer, as I am sure you can recognize.

I recognize also what a traumatic summer this must have been for you because making a move of the sort upon which you have decided is one of the most difficult things that we academics can possibly undergo. I hope that the Michigan people are doing everything possible to make it as painless as they can.

As a 30 year veteran of Yale and New Haven, I very much appreciate your feelings but let me only wish you every success and happiness in the new position at Michigan. As I said above, I know that you will do a superb job and I will always feel free to call on you for help and advice.

With warmest best wishes and warmest congratulations,

Sincerely yours,

D. Allan Bromley

July 12, 1991

Dr. D. Allan Bromley
Science Advisor to the President
The White House
Washington, D.C.

Dear Allan,

I am moving on to become the Dean of the School of Natural Resources at the University of Michigan. They made me an offer I couldn't refuse. After one more vote from their Board of Regents in a couple of weeks, to approve the final terms the provost and I negotiated, it will be completely and officially done.

I had not realized how uncivilized New Haven had become until I started trying to visualize us living in Ann Arbor. The contrast is stunning. I don't know if I told you, but Chris Prince, the Yale sophomore who was gunned down on Hillhouse in late February, was in my college (Pierson) and was also the younger brother of Jackie Prince, a dear friend and former student who did both her management and environmental studies masters degrees with me. The memorial service was impossibly difficult, and I decided right then it was time to get out of New Haven.

About a week after Chris' memorial, the Michigan folks called wanting to know if I would be interested in the job. I spent three days there in mid-April, returned in late May, and then again on June 13 to interview with the regents. They voted on the four finalists, and I got the offer two weeks ago. It took about ten minutes to calm down enough to call them back to begin discussing terms. Everything was settled yesterday, and I'm as energized as can be.

They want me to start September 1, and part of the negotiation was to give us time to settle in. I won't be the real dean until January 1. There is a solid acting dean in place who is willing to mind the store and break me in over the fall term. Matthew will be entering middle school, grades 6-7-8, and a September start for him is imperative. So we're off to Ann Arbor in about a week to start looking for a place to live.

I have a 20-year investment in Yale, counting four years as a graduate student and 16 as faculty. Leaving evokes lots of different feelings, not the least of which is sadness for the separation from many good colleagues. It is, however, time to move on.

cordially, G.D. Brewer

THE WHITE HOUSE

July 3, 1991

D. Allan Bromley, Director
Office of Science and Technology Policy
358 Old Executive Office Building
17th & Pennsylvania Avenue, NW
Washington, DC 20506

Dear Dr. Bromley:

Many thanks for your contribution to the 1991 Convocation of Professional Engineering Societies held at the National Academy of Engineering on Tuesday, June 25. Your candid remarks and evident clear vision were not only refreshing but encouraging. Never before have I felt that the President had an advisor who understood the critical scientific and technical issues challenging the future of the United States.

I am writing to you to offer the cooperation and assistance of the Institute of Industrial Engineers in your difficult role as Presidential advisor. As you are aware, industrial engineers are key players in organizational change to make companies more responsive to technological change and consumer demand, in short, reducing the time to go from theory to practice, giving the company the edge over their competitor.

The contributions made by IE's in TQM, concurrent engineering, system simulation, and design for manufacturing and assembly are documented and well known. In particular, IE's are best noted for their keen and unique skill to best utilize and motivate employees at all levels within an organization. It is in these critical areas where we would like to offer our help. More than half of the critical technologies addressed by the National Critical Technologies Panel are mainstream to Industrial Engineers. Yet, we were not called upon as a Private Sector Organization to help.

Give us the opportunity to help assess the critical technology issues facing the U.S. in the future.

Best regards,

Gregory Balestrero
Executive Director

THE WHITE HOUSE
WASHINGTON

July 24, 1991

Dear Deeda:

Many thanks for your letter of July 13th which arrived while I was in Puerto Rico organizing a Western Hemisphere Environmental Research Institute.

I was delighted to hear your good comments about my colleague D.A. Henderson, but I too was very much disappointed that I was unable to join you for the dinner in Bernadine's honor, both because I know that I would have enjoyed your warm hospitality, and because I have a very special affection and respect for Bernadine. As you know, unfortunately I was committed to the keynote address in the inauguration of Donald Langenberg as Chancellor of the University of Maryland System.

From all reports which I have heard, it was a spectacular dinner and Bernadine was both honored and delighted.

I have been talking with Florence Mahoney and your prediction was precisely accurate. What I originally did was to invite her with the hope of having her join you, Bernadine, and me at the White House for lunch, but given her somewhat frail condition, she instead insisted that it would be difficult for her to negotiate the stairs into the Mess and that she would prefer instead to organize a dinner at her home. This she is doing and I am told that she will be in touch with me in the near future. She seems still remarkably interested and involved and is truly a great lady.

Unfortunately, it looks as though our schedules are exactly out of phase for August because I will be here through the month leaving on the 16th to spend the remaining two weeks with my family at our home in Northern Canada. I very much hope that your meetings in Venice and in Paris will be very pleasant ones indeed. We will just miss the possibility of crossing in Paris by a week since I expect to be there for a few days during the first week in August just after you have left.

You mention a brief dinner with Bernadine and Congressman Dingle during the latter two weeks of August; unfortunately I will be away at that time but would be absolutely delighted to join you at some later time if that should turn out to be possible.

In the meantime, let me wish you the happiest and most productive of remaining summer weeks.

Sincerely yours,

Dear Allan,

Ever so many thank yous for your wonderful letter. I was so delighted to receive the report "Maximizing Human Potential". It was as if we had been on the same wave length. I had heard about the report and yesterday I had tried at the Neurology Institute and had thus far failed to track it down. Then it came in the mail today from you! I think it is a superb document. Everything about it is excellent. Most important, the quality of the writing is clear and the selection of photographs could not be improved upon.

I knew Sylvia Conte quite well as he was a great friend of Mary Lasker's and he has been to a number of dinners here. He was always so helpful. So it is really great when such an excellent document is dedicated to him.

I was sorry that you couldn't come to the dinner for Bernadine. I think it went quite well, although it grew a little larger than I had originally planned. We finally sat down fifty-eight people! So it was not exactly intimate, but it was a good mixture of people and I was thrilled to have the chance to meet your Dr. Henderson (DA), who is outstanding. I had been present at a Dana Foundation award ceremony when he had been given their award for the eradication of small pox. I have often brooded about it since we had given the Lasker Award several years before for the eradication of small pox, but we gave it to Dr. Mahler who was then General Director of WHO. I think we would have been so much wiser if we had given it to Dr. Henderson who really had everything to do with it.

We were as I said a great mixture with quite a few people from the pharmaceutical industry, and as could be expected, quite a number of scientists, science writers and congressman. There were a few people who really impressed me enormously like Dr. Kessler, the head of the FDA. I sat next to him, and I must say one has the distinct impression of a man with a mission. I had a very definite impression that he is one of those very gifted strategic thinkers. Another real star is Olympia Snow, who is on the aging committee and I think she could be a great help to Bernadine as she is full of admiration. However, anyone who has encountered Bernadine in the last months who has not known her before, is absolutely dazzled and there is such enthusiasm on the campus.

In regard to Florence Mahoney, we are going to have dinner with her tonight, but this is the first time Bill and I have seen her, though she has been home nearly a month. We have asked her a number of times but I sense perhaps she is a little more fragile than last summer. She must use a walker or wheelchair - so she is not going out as much as in the past. I mentioned to her that we had lunch, and that you wanted to get together with Bernadine and she was delighted at the idea. I am sure that she would like to be invited to the executive dining room. I think that somehow a wheelchair over those five steps could be managed. Otherwise when you invite her, she will just turn it around and say, oh come to her house. She did say that she wanted to talk to you seriously. I have the impression she is working just as hard as ever and I must say she does it with such charm. One of her current projects however, which has been on her mind for the past two years and now she seems more determined than ever is to introduce legislation that people would have to have a license to have a baby!!!

I leave for Europe this Wednesday for an osteoporosis meeting in Venice and then I will be in Paris for a few days as I have a planning session for a cancer and AIDS meeting that will take place in March 1992. Although I return to the United States on the 30th, I really won't be back in Washington much before the 14th of August as I have got to be at Harvard and in New York the first two weeks of August.

Page 4

Then I will be in Washington the last two weeks of August and then I am off on vacation for the first three weeks of September.

If you are around those last two weeks of August, let's try to get together. Perhaps you could come here for a tiny dinner with Bernadine and I might try to get Congressman Dingle who told me he would very much like to get to know Dr. Healy.

With all best wishes,

Deeda

Mrs. William McCormick Blair, Jr.

Florence was in great form
at dinner Saturday — On a sad
note you may — Margaret & John
Robson's son Mathew died
in San Francisco.

THE WHITE HOUSE
WASHINGTON

July 22, 1991

Dear Dr. Boer:

Thank you for your letter of June 28 in which you expressed willingness to testify on behalf of the IRI Fellow program.

Like you, I deeply regret the at least temporary cessation of the program; the program has been enormously useful over the years in bringing private sector input into OSTP and the White House. The problem of potential conflicts of interest is a difficult one, but we still have hope for resolution. However, I don't feel that the OSTP oversight hearing is the appropriate forum to seek resolution.

In the meantime, as you are probably aware, a competitive Sloan Fellowship program for OSTP has been established through the Sloan Foundation, and two industrial fellows will be joining OSTP in September. One of these fellows is your IRI colleague Ward Haas. We will also have, again from industry, a Presidential Fellow in residence at OSTP in FY 1992. We expect, of course, to maintain our relationship with IRI and to call on the membership for input on a variety of issues.

Sincerely,

D. Allan Bromley

Washington, DC 20506

Dear Dr. Bromley:

As the President of I.R.I., I want to reiterate our concern, and to express my personal regret, about the current, unresolved status of the I.R.I. Fellow program in OSTP. As you well know, this program has been extremely effective over the past eight years in providing OSTP with industrial expertise, opinion, and contacts on a wide variety of issues affecting industry and the economic well-being of this country.

I was particularly disappointed to learn that the conflict of interest issue could not be resolved prior to Jules Blake's departure from OSTP. Therefore, I would like to offer whatever assistance I can to help resolve this matter as quickly as possible.

I understand that the House Space, Science and Technology Committee plans to hold oversight hearings on OSTP on July 25. Either I, if my schedule will allow, or Charles F. Larson, our Executive Director, would be willing to testify on behalf of I.R.I., particularly if you believe that it would help facilitate a resolution to this "stumbling block." Please advise me how we might proceed to work toward eliminating this barrier that prevents us from continuing what is clearly a worthwhile program for all involved.

Sincerely,

F. Peter Boer
President

FPB:pt

THE WHITE HOUSE
WASHINGTON

July 9, 1991

Dear Gary:

This is a much belated response to your letter of June 5th which arrived while I was in the Soviet Union on an extended tour.

Unfortunately, I can be of little help concerning Michael Levine's nomination to the Cosmos Club because I have resigned from that Club after more than 20 years of membership.

The reason was purely and simply economic. In the two years that I have been here in Washington I have had no occasion whatsoever to use the Cosmos Club and, at the same time, because I am now a resident the Club expected me to pay the \$1,000 annual membership fee. Given the financial beating that I am taking by being here in the first place, the honor was simply too great and so I have reluctantly resigned and am assured by the Cosmos Club folk that whenever I return to the academic world I can be reinstated.

Since I am no longer a member my opinions are no longer of any interest to the Admissions' Committee.

Although I agree that Michael Levine has lacked the normal amount of finesse at Yale, I knew him slightly during his prior business career and must say that in that guise I was impressed by what he was able to do for his companies. Somehow the match at Yale was bad from the beginning and the whole matter was handled with less than diplomatic elegance.

Sometime when your travels bring you to Washington give me a little warning and I would be happy to invite you to lunch at the White House Mess. It would be good to have an opportunity to catch up on details at Yale.

With warmest best wishes,

Sincerely yours,

Dear Joseph:

I am delighted, as are all my colleagues, that you have decided to accept our offer to spend a year as White House Fellow and as my Special Assistant here in OSTP. All of us are looking forward with real enthusiasm to your arrival on September 3rd. I shall have my Chief of Staff, Ken Yale, get in touch with you to make sure that we have taken care of all the necessary preliminaries so that you can hit the ground running on your arrival.

Again, let me say how personally pleased and delighted I am that you have decided to join us.

Dear Dr. Bromley:

Pursuant to our meeting of June 20, I am deeply honored to accept your generous offer to become your Special Assistant. In view of my background and strong interest in the functions performed by the OSTP, I feel that this assignment will allow me to make a positive contribution to the country while at the same time greatly expanding my knowledge of governmental processes at the highest level.

I sincerely thank you for this most exciting opportunity and look forward to finalizing my arrangements with your office for a September 3, 1991 starting date. With sincere regards, I remain,

Very truly yours,

April 30, 1991

OFFICE OF THE
DIRECTOR

Dear Concerned Citizen:

We have selected you to receive the first issue of *The Future of Children*, a multidisciplinary journal developed for policymakers and public and private decision makers concerned with efforts to improve the health and welfare of children.

The Future of Children is developed by the staff of the Center for the Future of Children, a grantmaking, policy development, and research group established two years ago as part of The David and Lucile Packard Foundation. Our purpose in publishing this journal is to provide multiple perspectives on critical issues in a format that bridges the technical analysis of academic journals and the general coverage found in the popular press. Our contributors represent a wide range of expertise in fields including epidemiology, medicine, child welfare and child development, education, health economics, and law and public policy.

Each issue of the journal will focus on a particular topic, providing up-to-date information and analysis on major issues relating to children's health and well-being. This first issue focuses on the problem of drug-exposed infants. Our second issue, due to be published in January 1992, will focus on school-linked health and social services for children.

We invite your comments and criticism; if you have a moment, please fill out and return the reply card enclosed in the journal. Our hope is that you will find this publication useful and informative.

Sincerely,

Richard E. Behrman

Richard E. Behrman, M.D.
Editor, *The Future of Children*
and Managing Director, Center for
the Future of Children

April 19, 1991

ADDENDUM

to: "Overview of State Legislative and Judicial Responses" by Carol Larson, pp. 72-84, and "Perspective of a Reproductive Rights Attorney" by Lynn Paltrow, pp. 85-92

The Larson and Paltrow articles herein discuss court decisions in which pregnant women who ingested cocaine during pregnancy were prosecuted for delivering drugs to their children. In April 1991, two state appellate courts ruled on this issue. Both cases involved charges that the "delivery" of drugs to the child occurred through the umbilical cord in the short time after the baby had been delivered from the birth canal and before the umbilical cord was cut.

In *Michigan v. Hardy*, No. 128458 (Mich. Ct. App. April 1, 1991), the three-judge panel held unanimously that the Michigan legislature did not intend its statute prohibiting delivery of cocaine to children to apply in these circumstances. In *Johnson v. Florida*, No. 89-1765 (Fla. Dist. Ct. App. April 18, 1991), the three-judge panel was divided, with the majority finding that the Florida statute regarding delivery of controlled substances to a child had been violated. The majority wrote that they could "reach no other conclusion logically"; the appellant "took cocaine into her pregnant body and caused the passage of that cocaine to each of her children through the umbilical cord after birth of the child, then an infant person." The third judge filed a lengthy dissent, reviewing the legislative history of the statute and concluding that "the Legislature expressly chose to treat the problem of drug-dependent mothers and newborns as a public health problem and that it considered but rejected imposing criminal sanctions...." The panel certified the question to the Supreme Court of Florida; an appeal will be filed.

Earlier in 1991, an Ohio appellate court ruled that Ohio's child endangerment statute was not intended to apply to the "passage of harmful substances from a mother to a child in the brief moments from birth to the severance of the umbilical cord." *Ohio v. Gray*, No. L-89-239 (Ohio Ct. App. January 23, 1991). In April, a North Carolina trial court also dismissed indictments for assault and delivery of cocaine, finding that the statutes did not apply to alleged harm to a fetus. *North Carolina v. Inzar*, No. 90CRS6960 and 90CRS6961 (Robeson County Sup. Ct. April 9, 1991).

Constitutional questions were not discussed in these opinions, although the court in *Johnson* wrote that it had considered arguments about "the mother's rights to her body, and the analogies to the abortion cases." As the Larson and Paltrow articles discuss, at least two trial courts (in Michigan and Massachusetts) have considered the constitutional challenges to such prosecutions and ruled that they violated women's constitutional rights to due process and privacy.

THE WHITE HOUSE

WASHINGTON

July 9, 1991

Dear Heinz:

This is a very belated reply to your letter of May 14th concerning your nomination of Fay Selove for the National Academy of Sciences award for Scientific Reviewing. I am very enthusiastic about this possibility and have already sent the supporting letter to Dr. E. J. Sherman as you request.

I am sorry that it has taken so long to get back to you because I have been doing some extensive travelling in the Soviet Union and elsewhere.

I look forward to working with you in the Academy; I do indeed understand some of the problems of the election process better than I did in the past and the next time you come to Washington I would appreciate it if you let me know because I would be delighted to invite you to lunch at the White House Mess where we could discuss a number of topics of mutual interest.

My warmest best wishes to both you and Eleanor,

Sincerely yours,

MAY 14, 1991

Dr. D. A. Bromley
The White House

Dear Allan:

As I mentioned to you in Washington, I am nominating Fay Selove for the National Academy of Sciences 1992 Award for Scientific Reviewing. This prize is awarded annually for excellence in scientific reviewing. It will be presented in the physical sciences in 1992. The previous winners in the physical sciences were: Conyers Herring, Michael Fisher, Virginia Trimble, and Sidney Coleman.

Supporting letters should be sent by August to:

Dr. E. J. Sherman
National Academy of Sciences
NAS 146
2101 Constitution Avenue, NW
Washington DC 20418

I enclose a copy of Fay's C.V. and a list of her review articles. I propose to emphasize the importance of the reviews for other areas of science, such as astrophysics.

I am writing in the hope that you are willing to support this nomination. I would appreciate knowing whether you are writing a letter, and getting suggestions of other potential supporters.

It was a pleasure to see you and your daughter in Washington and to have you finally an active member of the Academy. You will now understand better the problems of the election process.

Sincerely,

Heinz

Dear George: (Bugliarello)

Enclosed herewith is the promised copy of my talk at yesterday's Polytechnic commencement exercises.

I am deeply honored to be a member of the Polytechnic family and would again congratulate you on the superb job you have done in building it to its present strength.

As you leave the Presidency, you can do so with great pride and security of accomplishment.

As I remind you, we shall be in touch!

I would be particularly pleased to meet your wife. My warmest regards to you both.

Sincerely, Allan

Dear Allan:

As Polytechnic's 136th Annual Commencement is fast approaching, a flurry of activity surrounding the occasion has begun. I am writing to ask if you would please deliver our commencement address when you receive the honorary Doctor of Engineering degree on June 3.

Your remarks should be about 15-20 minutes in length; the audience consists of approximately 800 graduates and their families, the faculty, the Polytechnic Board of Trustees, the other honorary degree recipients and other friends of the University.

Polytechnic will confer two additional honorary degrees at the ceremony. Professor Ota Wichterle, President of the Czechoslovak Academy of Sciences, will receive the Doctor of Science degree; and Dr. Samuel Goldberg '21, '35, who received the first Ph.D. degree Polytechnic ever conferred--in chemistry--will be awarded Doctor of Engineering.

All of us at Polytechnic are looking forward to having you with us at this special time to celebrate this honor. We will make this a double celebration to make up for last year.

With kind regards,

Sincerely yours,

George Bugliarello
