THE WHITE HOUSE

April 22, 1991

Dear George:

Many thanks for the copies of the
R&D position hearings.

It is a very real pleasure working
with you; I am convinced that we can
accomplish some good things both
insecticidal and technical for the

Nation.

Your staff have been extremely
helpful.

I am hoping that you will be able
to join us in Moscow - as well
as Baikonaev and Novosibirsk
should you have the time.

Again thanks and all best
wishes.

Sincerely
Alan

Dear Dr. Bromley:

The hearing volume from the R&D Posture hearing on February 20th at which you testified has just arrived from the printers, and I am glad to send you several copies.

As I told you immediately following that hearing, your testimony was most useful to all of us on the Committee, and it is a pleasure to express to you, again, our thanks for the fine contribution you made.

In the event you find that you would like to have additional copies, my Committee staff will be glad to arrange to have them sent to you.

Sincerely,

GEORGE E. BROWN, JR.

Office of Science & Technology
The White House
Washington, D.C.

Dear Dr. Bromley:

On behalf of the Comstock Club, Inc. of Sacramento, California, it is my pleasure to invite you to address our organization on your next trip to the West Coast.

The Comstock Club is comprised of men and women who share a common interest in public affairs and who meet regularly to hear speakers of national and international prominence. Currently, we have over 3000 members who comprise a healthy cross-section of Northern California's professional, business, governmental and educational leadership.

Since Sacramento is the Capital of the State, it houses one of the largest and most sophisticated concentrations of reporters in the State. Both wire services have major contingents stationed at the Capitol. California's leading newspapers, radio stations, television stations and magazines, representing all markets in the State, have full time offices staffed in the Capitol. All of these newspapers receive notification of each Comstock Club program with the result that addresses to the Club are covered in the major media outlets in the State. In addition, your entire speech will be taped, and all or portions of it will be replayed at various times throughout the week following on Northern California TV and radio stations with an audience running well over 4,000,000. Our two local papers, the BEE and the UNION, with a combined circulation of 350,000 will also cover the meeting.

For your information, I am enclosing a brochure describing our Club in more detail, as well as a partial listing of some of the speakers who have addressed us in the past.

Comstock Club meetings, with attendance running 250 to 1500, are normally held on Monday at 12 noon with adjournment at approximately 1:30 p.m. However, should your schedule not permit your addressing us on a Monday, perhaps you can suggest a substitute day.

We look forward to your reply.

Very truly yours,
Michael E. Barber

THE WHITE HOUSE

WASHINGTON

March 26, 1991

Dear John:

Many thanks for the copy of your report **The Decade of Discovery and Astronomy in Astrophysics**. I have, as yet, only had an opportunity to read the detailed recommendations and glance through the report but you have obviously done an outstanding job and once again I would congratulate you on taking on the difficult issue of priority setting. There is no question whatsoever that this makes your report vastly more useful, not only to us in the Administration, but also to the Congress in that it gives a prioritized overview of the entire field.

You have selected a marvelous set of illustrations and have managed to keep the report to manageable length so that I am sure that it will be very widely used.

The entire scientific community, and particularly the astronomers and astrophysicists, is much indebted to you for your dedicated service as chairman of this important study.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dr. D. Allan Bromley
Assistant to the President for Science
and Technology
Old Executive Office Building
17th Street & Pennsylvania Ave., N.W.
Washington, D.C. 20506

Dear Allan:

I was pleased to be able to visit with you at the meeting of The Business Council at the White House on February 28th. It was an exciting time to be able to meet with the President and Secretary Cheney.

During our discussion I mentioned Dr. Carlo Parravano and the excellent work that he has been doing in the field of in-service training for teachers of mathematics and science. I met Dr. Parravano through the Master Teacher Program sponsored by The Woodrow Wilson National Fellowship Foundation and was impressed by his boundless energy, enthusiasm and ability to get things done.

As I promised, I am enclosing a memorandum describing some of the work that Carlo is doing at SUNY Purchase with the Westchester School System. You will find his resume attached to the back of the memorandum.

I am also enclosing some pamphlets related to his work.

While there is obviously no single solution to our educational problems, I believe that Carlo has an excellent and proven program and that the country would benefit from an expansion of the kind of program he has been implementing. You might well find it worthwhile to invite him to Washington for a discussion of his program and why it works so well.

Dr. D. Allan Bromley
1991

-2-

March 19,

As I mentioned when I was in Washington, I have been concerned that industry is wasting tremendous amounts of money in attempting to improve our educational system because each company feels obligated to invent its own solution. I believe that it could be very helpful to bring together the appropriate people from a group of key corporations such as those involved in the Business Roundtable and the Business Council and expose them to ten or twenty programs that you believe to be particularly effective and then attempt to rally their support for those programs instead of following the fragmented approach that exists today. I know that when I was Chairman of GTE we were just as guilty as all the other companies in trying to invent our own solutions to the problem when there were very good solutions out there that are under-funded and generally unrecognized.

It is great to have you in Washington and I know that you will make a real contribution. Best wishes for continued success.

Sincerely yours,

Theodore F. Brophy

THE CENTER FOR MATHEMATICS AND SCIENCE EDUCATION
SUNY Purchase Westchester School Partnership

Dr. Carlo Parravano, Director

The Center for Mathematics and Science Education of the SUNY Purchase Westchester School Partnership is about to begin its seventh year of providing programs for secondary school science and mathematics teachers and students. The Center was established in 1985 by a consortium of thirty-three Westchester County school districts (Appendix A), businesses, community agencies and the State University of New York at Purchase as a direct and pragmatic response to the numerous reports severely critical of American schools, and mathematics and science education in particular. The Director of the Center is assisted in the development of all programs by an Advisory Committee composed of teachers, supervisors, curriculum coordinators, Teacher Center Directors, and school administrators (Appendix B).

Over the last six years the Center, in cooperation with the National Science Foundation, the New York State Education Department, the Woodrow Wilson National Fellowship Foundation, and local corporations, has sponsored thirty-five one-week summer institutes, attended by nearly 1,200 science and mathematics teachers (Appendix C). The institutes, based on the concept of "teachers teaching teachers," support several goals:

- offering new concepts and classroom-tested teaching strategies
- providing a vehicle for reform in the mathematics and science curricula
- broadening opportunities for teachers to share materials, activities and ideas
- building wider networks and alliances among teachers
- strengthening the professional status of teachers

The format of the institutes has served the Center well and is its hallmark program. The institutes have certain salient features. They engender mutual respect and reinforce the significance of teaching through exemplary instructors, Master Teachers, who share experiences with their "students," their peers; they encourage rapid and efficient transmission of knowledge and teaching methods; they lead to an interaction of teachers from separate schools; they develop the teachers' pride in their academic disciplines and recreate the intellectual excitement that formed a large part of their initial desire to become teachers; they promote collegiality among teachers at a time when their profession is assaulted by criticism; and they recognize Master Teachers as first among equals-- superior in degree but not in kind.

A unique feature of the Center's institute program has been the emphasis on follow-up work. These activities are considered to be essential for the success of the summer institutes. During the academic year, numerous and varied sessions continue the work of the summer institutes. Follow-up programs of lectures, demonstrations, "make-and-take," curriculum development conferences, and sessions designed to encourage participating teachers to exchange ideas on implementation have taken place. In each of the follow-up sessions held to date, participants have been encouraged to "bring a friend," which has greatly increased the effectiveness of the institutes. Including potential participants who might benefit from the institutes creates a support network which sustains the momentum already achieved by the training of their colleagues and enables teachers to escape the isolation inherent in their profession.

In an effort to encourage the participants to incorporate material from the institutes into their classrooms, teachers were provided with the opportunity to specify for purchase (up to \$50) items which they did not have available and would find most useful in their classrooms. This offer was a special feature of our institutes and was highly effective. Also, funds have been made available on a competitive basis to the institute participants for support of projects designed to disseminate, develop further, and implement curriculum materials presented at the institutes.

January 31, 1991

Hon. D. Allan Bromley
Assistant to the President
for Science and Technology
17th Street and Pennsylvania Ave. N.W.
Washington, D.C. 20506

Dear Dr. Bromley,

This is to request your consideration of sending a greeting of congratulations to Dr. Richard Bing of the Huntington Medical Research Institutes on the occasion of a benefit evening to celebrate his accomplishments in the fields of medicine and music.

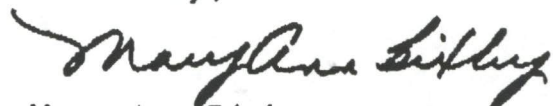

A brief biographical sketch of Dr. Bing accompanies this letter, and I will send additional materials under separate cover, including the feature article which is to appear in the HMRI newsletter February 1.

Presentations to Dr. Bing on the evening of February 16 will include tributes from the German consulate in Los Angeles for his contributions to cardiology in his native Germany, former Secretary of the Air Force Verne Orr who is now serving as chairman of Huntington Memorial Hospital, renowned local music narrator and lecturer Carl Princi who is familiar with Dr. Bing's music, and Dr. Kenneth Shine who is Dean of the School of Medicine at UCLA and himself a cardiologist.

Your greeting would be read during the program for the evening, which is a black tie event at a prestigious Pasadena private social club.

Please call my office with any questions, or if there is more information needed.

Sincerely,

Mary Ann Bixby

Richard J. Bing, M.D.
Director of Experimental Cardiology
Huntington Medical Research Institutes

Heartstrings celebrates the contributions of physician and scientist Dr. Richard Bing to cardiology and to the knowledge of cardiac metabolism which have affected and improved the lives of countless heart patients. His accomplishments as musician and composer are also widely recognized and his music has been played and recorded throughout the world. Dr. Bing joined the staff at Huntington Memorial Hospital and Huntington Medical Research Institutes in 1969. We invite you to participate in our tribute to the illustrious career of this extraordinary man.

STAR-NEWS

PASADENA, CALIFORNIA, TUESDAY, JANUARY 19, 1988

The grace of classical music, paired with the wonder of medicine, keeps doctor . . .

Inspired by the rhythms of life

BY SELWYN EIBER
Staff Writer

Dr. Richard Bing keeps a photograph of famed aviator Charles Lindbergh and a cassette tape of the orchestral composition "Missa" in his office at Huntington Medical Research Institutes in Pasadena. The 78-year-old director of cardiology and scientific development at HMRI was well acquainted with Lindbergh, and even worked closely with him in the 1930s on a project far apart from airplanes.

He also is quite familiar with "Missa," which means the Mass. He com-

posed it himself in 1979.

"I couldn't make up my mind whether to go into medicine or music," recalled Bing in a recent interview.

But medicine won out, and it was his early interest in tissue culture that brought him in contact with Lindbergh.

The former airman pilot astounded the world in 1927 when he made the first solo, nonstop transatlantic flight from New York to Paris aboard The Spirit of St. Louis.

But Lindbergh, like Bing, didn't stick to one field.

Lindbergh wanted to create an artificial heart that could circulate blood

through a body while surgeons work to repair the real heart. His sister-in-law had died because no such bypass system had been invented yet (and would not be until 1953).

Bing, along with experimental surgeon Dr. Alexis Carrel, was asked to work on the project, which resulted in a procedure that proved useful for researchers who wanted to study organs for days and weeks at a time.

Bing said Lindbergh was a visionary with his artificial heart concept.

Please see B

Page

Raleigh Souther / Star-News

Heart specialist Dr. Richard Bing

Bing: Diverse interests complete the m

Continued from Page A-1

"He had a very direct, almost naive mind," Bing said.

Bing remembers that when they first met, Lindbergh was very shy, but nevertheless had a great sense of humor. "He was never, never, never a stuffed shirt."

Bing also was not shocked or put off by a pilot dabbling in medical research.

"I always thought each individual should be judged by what they're doing and not their training."

When Lindbergh visited Bing and his family many years later, the flier had become much more personable.

"My daughter adored him. She was a teenager. I said 'Go out and see him.' She was absolutely enthralled."

Aside from medical pursuits, which have won him numerous awards, Bing has done much more than occasionally dabble in music.

At the age of 11, he was already playing one of Schubert's sonatas in the renowned St. Catherine's Church, which was then called the Meistersinger Church in Nuremberg, West Germany.

At 14, he began writing orchestral compositions while studying at the Hochschule Conservatory of Music in Frankfurt, West Germany, and he has continued to study and write music over the years.

While music and medicine may seem to be worlds apart, Bing sees many similarities.

"What always should shine through in every piece of music is your soul. Well, I'm a cardiologist, so I'll say your heart!"

The heart, Bing believes, also should play

a role in medicine.

"In medicine, you should have an emotional involvement with the patient," he said, denouncing physicians who prefer a detached style. "You should have full empathy."

"When the work is not very good, or I feel that research doesn't quite fulfill me, then I turn to music. It's a different side of the crystal." In both medicine and music, "we search for some of the secrets of nature."

Even though Bing is fast approaching 80, he has no intention of retiring or slowing down.

"I do think I work just as hard now as I ever did," he said.

Later this month, a London journal called The Bioscience reports will publish his latest article, which describes how cells can be made to produce substances that dilate blood vessels to improve blood flow through the heart.

And in April, he will receive an honorary degree from the University of Bologna in Italy, primarily for his pioneering work in cardiac metabolism. He was the prime founder and first president of the International Society of Heart Research.

Meanwhile, Bing is writing a symphony that focuses on two opposite and powerful emotions.

One part of the work is inspired by deeply introspective poems sent to him by a nun, who is the daughter of one of his patients. The second part is based on the bawdy play "Lysistrata," by the ancient Greek playwright Aristophanes.

Yet again, Bing is combining different sides of the same crystal.

Rabinovitch

"When the work is not very good, or I feel that research doesn't quite fulfill me, then I turn to music. It's a different side of the crystal."

THE WHITE HOUSE
WASHINGTON

February 22, 1991

Dear Bill:

Many thanks for sending me a copy of your 1990 Annual Report. It is an impressive document and one that brings with it very pleasant memories of my visit to your facilities last fall. I was particularly impressed by what you and your colleagues have accomplished and by the tremendous future potential that you have identified and already built toward in Hawaii. I also must say that I thoroughly enjoyed the visit to the telescopes on Mauna Kea and I would ask that you convey to all your associates who were involved in my visit, my sincere appreciation of their very obvious efforts to make my visit such a pleasant one.

With all best wishes,

Sincerely yours,

D. Allan Bromley

THE WHITE HOUSE

WASHINGTON

December 18, 1991

Dear Elaine:

I am very sorry that because the OSTP Christmas Party has been scheduled to coincide precisely with that of the Peace Corps I will be unable to join you on Friday, December 20. I had hoped to be able to join you for your swearing-in and it was kind of you to invite me, but unfortunately, the President decided that he needed a report that same day and I simply was unable to get away.

Let me, however, take this opportunity to congratulate you on your new appointment and to wish you a very happy holiday season and a very rewarding 1992.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Mr. Cobb:

Thank you for your kind letter of November 29 inviting me to speak at a Council session scheduled to be held in Boston on April 17-19, 1991. I apologize for the much belated response.

Because the subject of the future of information is one we are all very much concerned about, I would have liked to contribute to your organization's efforts to this end. However, the number of requests I receive is overwhelming and growing, and I find the dates in question are not good for my schedule, so I must regretfully decline.

Thank you for thinking of me and may I offer my best wishes for success in the activities of the Council.

Sincerely yours,

D. Allan Bromley
Assistant to the President

February 5, 1991

91 FEB 7 P 3: 14

Dr. D. Allan Bromley
Director, OSTP
Old EOB, Room #358
Washington, D.C. 20503

OFFICE OF THE
DIRECTOR

Dear Dr. Bromley,

you are invited to receive the Feigenbaum-Ford Science Advocate Award in recognition of your outstanding efforts to strengthen public support of our space and science programs on Friday evening, April 26, 1991, here in Cocoa Beach, Florida. Specific arrangements can be made through our Florida office.

Each year, SpacePAC seeks to recognize those individuals who have contributed to increasing support for American space and science policy. In doing so, we hope to fulfill our goal of broadening public support for space and science programs. The presentation of the Henderson Moore Space Advocate Award and the Feigenbaum-Ford Science Advocate Award constitute a joint fund-raiser for SpacePAC and our state affiliate, SpacePAC-Florida, in conjunction with the end of Space Congress, which is in its 28th year.

I will be contacting your office next week to confirm your participation in this event.

As always, I am, your obedient servant,

Alan Cottrell
Executive Director

THE WHITE HOUSE

WASHINGTON

January 28, 1991

Dear Dr. Chow:

I am delighted to be able to tell you that we have completed our interviews with potential candidates for the Policy Analyst position in Life Sciences here at OSTP and that in consequence I have the pleasure of inviting you to join us in that capacity. All of us who had the pleasure of meeting with you were much impressed with your experience and background and share the belief that you have much to contribute to our activities.

As Policy Analyst you will work under the direct supervision of the Associate Director for Life Sciences. The President has announced his intention to nominate Dr. D. A. Henderson for this Associate Director position and I would ask you to contact Dr. Henderson, who is currently working here as an OSTP Consultant, at your earliest convenience. You should also contact my Chief of Staff, Dr. Kenneth Yale, to ensure that the appropriate paperwork is completed to get you officially on board.

Congratulations and welcome aboard!

Sincerely yours,

A handwritten signature in black ink, reading "D. Allan Bromley". The signature is written in a cursive style with a large, sweeping flourish at the end.

OFFICE OF THE
DIRECTOR

Dr. D. Allan Bromley
The Office of Science and Technology Policy
Executive Office of the President
Washington, DC 20500

Dear Dr. Bromley:

As a former student in your "Science and Public Policy" course, I especially enjoyed the opportunity to hear you speak again at Yale. Despite the fact that most of our news on Science policy comes filtered through the media, I do not think that anyone left your Master's Tea or lecture without complete confidence in our government's handling of scientific issues. As students, we welcomed the opportunity to hear about not only the problems, their history and their surrounding facts (we get that all the time) but also a reasoned, well-thought attempt at a solution. (which we rarely receive.) Many in America today will have us convinced that many of our ills are intractable; your discussions were very encouraging in their focused search for an answer.

I write to you in regards to the National Geographic Society, an organization I would like to be a part of. For when one speaks of illiteracy and lower standards of education, National Geographic certainly is a part of the solution. With their several publications, documentary films and educational services, National Geographic seems like an organization with a real mission. I would like to learn more about them and how to get involved. So if you have any advice or know somebody who would be willing to consult a Yale undergrad, I would be very grateful. To introduce myself, I have included my resume and a recent clip from your favorite newspaper. Thank you for your time.

Sincerely,

Kevin M. Callahan

Football Snapshots in the Land of the Rising Sun

By KEVIN CALLAHAN

WE came to Tokyo to play a football game, 38 Ivy League All-Stars for the Epson Ivy Bowl, unique among the many bowl games in that it matches American athletes against those of another country in a sport that has been all ours.

We left with more than bumps, bruises, spent film cartridges and a 47-10 victory over the Japanese. We left with a glimpse of a culture — if at times through a helmet's face mask — that our cameras could never record, a brief opening of the mind's shutter. Most of us had no idea that the Japanese even played football. Some wondered if linebackers employed karate kicks or if sumo wrestlers filled the offensive line. We all had a lot to learn.

After five days as athletic ambassadors we discovered that football is booming in the

Kevin Callahan, a Yale senior from Naples, Fla., was an all-Ivy halfback.

Land of the Rising Sun. The team we met was made up of players from the top 10 of more than 100 universities that now field varsity squads.

One reporter told me that the Japanese cherish the amateur ideal and that the Ivy League was invited to play because the Japanese appreciate the fact that there are no athletic scholarships among the Ivies. I suspect they also appreciate that most of us are not 6 feet 5 and 270 pounds, do not bench-press 450 pounds, and cannot run 40 yards in 4.3 seconds.

Many things separated us from the Japanese, not the least being language. In the game, the communication gap allowed us to use a simple audible system like, "Red, sweep right." If our offense had really bogged down, I suppose our quarterback could have called an audible, something like, "Receiver! Run 15 yards, turn around and I'll throw you the ball."

It was football that brought us together. The Japanese treated the impending game seriously. Their head coach told more than 70

reporters at a news conference that his team "would no disrespect their country."

Asked about the game, their quarterback and captain said, "To play is to win." One linebacker wished he did not break our bones.

Intimidation, however, goes only so far when you have the Horn on your side. Jay Bloodorn of Cornell, a tackle who is 6-6 and 290 pounds. While the Horn was mild of manner off the field, the Japanese were impressed by his sheer size. Some pleaded that he not hit them too hard.

Japanese football is probably like that of the early days of the sport in America. They de-emphasize defense as an aspect of the game. In several meetings with Japanese coaches, Seb Laspina, the offensive coordinator from Yale, said all they wanted to discuss was how to improve their offenses.

On game day the two teams came together at Yokohama Stadium and any notion of a xenophobic clash was quickly dashed when half of the 30,000 spectators were given blue pom-poms and spent the entire game rooting

for us.

Unfortunately, the Japanese were clearly outmanned against the Horn and others and so it was not much of a game from the start. They had one big offensive lineman whom they called Gorilla. At 6-2 and 250 pounds, he stuck out on their team like a lawn sprinkler in a Japanese garden.

And the language gap made for some confusing moments. At one point while back to field a punt, I tried to explain to the referee the difference between holding my hand up, which was shading the sun, and waving my hand which would be signaling a fair catch. He smiled and nodded at both gestures so I decided just to try to catch the ball with the sun in my eyes.

In the end, the lack of defense allowed us to rack up 47 unanswered points. But what the Japanese lacked in size and technique they made up for in perseverance.

When they finally scored, after threatening all day, the Ivy sideline was delighted out of respect and gratitude. Besides, most of us agreed that their touchdown play made for a really good picture.

Dear Dr. Chaffee:

Many thanks for your invitation to sit on the Editorial Board of **Super Collider News**. While I appreciate the invitation, I am afraid that I must decline. It would simply not be appropriate for me in my present position to join you on your board.

With all best wishes,

Sincerely yours,

A handwritten signature in black ink that reads "D. Allan Bromley". The signature is written in a cursive style with a large, prominent "D" and "B".

SUPER COLLIDER

NEWS

January 16, 1991

Dr. D. Allan Bromley
Director
OSTP
Old Executive Office Building
Washington, DC 20500

Dear Dr. Bromley:

The purpose of this letter is to formally invite you to sit on the Editorial Board of SUPER COLLIDER NEWS. It is hard to think of an advisory board of this type functioning without you and we would be greatly appreciative should you be able to join us.

As a board member, you would receive a complimentary subscription to SUPER COLLIDER NEWS. (Since you already receive a complimentary copy, this would be extended indefinitely.) You would also be privy to all internal memoranda having to do with the scope and direction of the publication and yours would be an important voice concerning how accurate and focused the publication is on an issue-by-issue basis.

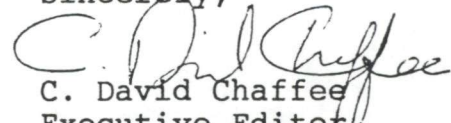

The purpose of the board is to make SUPER COLLIDER NEWS a better, more responsive publication. Input from people such as yourself would help to make that happen. While no formal board meetings are anticipated, your thoughts concerning specific articles appearing in the publication are always welcomed.

As soon as we have received approval from all those joining our board, we will send you a complete list as well as more detailed information about the publication. We will begin your subscription the day we have received confirmation of your participation.

As founding executive editor of SUPER COLLIDER NEWS, I am committed to an open, honest airing of the issues surrounding this fascinating machine. I believe SUPER COLLIDER NEWS can play a critical role in the growth and understanding of SSC. But, to do that, we need intelligent input from those such as yourself who are so instrumental in making the project move.

I look forward to hearing from you soon.

Sincerely,

C. David Chaffee
Executive Editor
SUPER COLLIDER NEWS

Gentlemen:

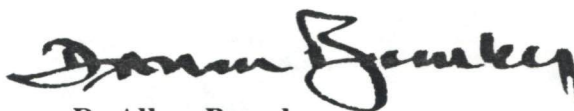

Many thanks for your note of February 7 in which you invite me to contribute an appropriate research paper to one or more special issues of your publication **Foundations of Physics** which have been set aside to mark the occasion of the 90th birthday of my old friend and colleague, Henry Margenau.

Much as I would be delighted to join you in this venture, because Henry has indeed been an old friend, I regret to say that since moving to Washington I have had absolutely no time whatsoever for personal research and therefore, am unable to comply with your invitation.

Many thanks for thinking of me in connection with this activity and every success in pulling a collection of papers worthy of Henry's contributions to physics and to philosophy.

With all best wishes,

Sincerely yours,

D. Allan Bromley
Assistant to the President

Dear Mr. Crafts:

Thank you for your letter of February 20, inviting me to address the WAdaS '91 Conference scheduled for June 20 at the McLean Hilton Hotel.

As much as I would like to join you and your colleagues, I must regretfully decline your kind invitation because I will be on travel at that time.

Thank you for thinking of me, and may I offer my best wishes for a successful conference.

Sincerely yours,

Dear Dr. Bromley:

This is to invite you to speak at the WAdAS '91 conference on the evening of June 20, 1991, at the McLean Hilton hotel. The conference theme is "Software: Foundation for Competitiveness." Speakers for other sessions at the conference include a representative from the Malcolm Baldrige National Quality Award Board of Examiners, and a member of the competitiveness panel "Strengthening of America" of the Center for Strategic and International Studies. The conference agenda also covers a variety of technical and management issues related to software. We are inviting you to be the dinner speaker on Thursday evening of the conference, with 30 minutes of time to present your views on technologies (including software) which are critical to ongoing U.S. competitiveness in global markets.

Your position on critical technologies and the resulting impact on U.S. competitiveness is of very high interest to the conference attendees. The breadth of attendee backgrounds ranges from corporate and government/military executives to technical managers, to software technical specialists. The blend of backgrounds and interests represents an excellent example supporting your position that competitiveness and national security are intertwined.

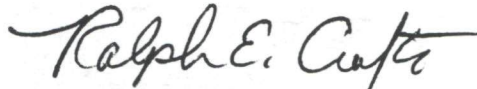

For your information, one of the principal sponsors of the conference is a technical organization, SIGAda (Special Interest Group on Ada), which is part of the Association for Computing Machinery (ACM). Ada is the computer programming language which has been mandated for all Defense Department software development. Ada is also an international standard, and is being used extensively in commercial applications around the world.

It is my responsibility to select and manage the panel sessions and special event speakers for the conference. Your participation would be a superb addition to the conference agenda, and would serve to emphasize the competitiveness theme. The audience will also provide you with an excellent forum for garnering support for your views on critical technology programs. Your acceptance of this invitation will be greatly appreciated.

If you require additional information, please let me know. I am available to work with you and members of your staff to provide background information on the conference, details on the Ada market, and how Ada has played a role in enhancing competitiveness for a variety of companies throughout the world. My private office is in Harpers Ferry, West Virginia, so I can drive in for meetings with you or your staff at any time you find convenient. I can be reached at 304-725-6542 (FAX is 304-725-6543).

I appreciate your time and interest, and I look forward to your acceptance.

Respectfully,

A handwritten signature in black ink that reads "Ralph E. Crafts". The signature is written in a cursive style with a long, sweeping tail on the letter "t".

THE WHITE HOUSE

WASHINGTON

April 18, 1991

Dear Billy:

This is a very much belated letter to thank you both for your superb hospitality while I was visiting Rochester and for your letter responding to my request for information concerning EKTAR film in sheet sizes. I understand the question of market size and I am afraid am in no position to guarantee you any major increase in that market, but I do know that there are a substantial number of very highly talented photographers who would give a significant portion of their right arm to obtain 4x5 sheets of the EKTAR 25 film because of its superb characteristics.

I was very much impressed by everything that you were able to show me in the very brief time that I had to spend with you and your colleagues in Rochester.

Over the years, since the days when I was using a Kodak Medalist II camera, I have acquired a vast number of Kodachrome slides and have recently been doing a little editing among these to select a subset that I would like to have printed before they deteriorate, or before the color shifts in any significant way. I must admit that thus far I have been amazed at the stability and brilliance of the color in slides that are over 40 years old. While I was at Kodak I mentioned this to some of your senior people and my worry about turning loose some of these totally irreplaceable slides to the tender mercies of any of the processors that I have encountered thus far in the Washington area.

Two of them suggested that when I had the subset fully collected, I should contact you so that it could be arranged for these to be handled entirely within the Kodak organization to avoid any of the potential loss of destruction possibilities that I am afraid are present in most of the drug store organizations. If this were to be possible, I would be very appreciative.

Again, my thanks for taking such good care of me during my Rochester visit. I thoroughly enjoyed both the luncheon at Kodak Corporate headquarters and the visit to the research facilities.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "Allan", with a long, sweeping horizontal stroke extending to the right.

D. Allan Bromley

The Honorable D. Allan Bromley
Executive Office of The President
Office of Science and Technology Policy
Old Executive Office Building, Suite 348
Washington, D.C. 20506

Dear Dr. Bromley:

We appreciate the time you spent with us in Rochester a couple of weeks ago and I hope that you found the visit informative and useful. I am forwarding some information to you from Dr. Gary Conners, regarding the National Technology University (NTU), that he briefly discussed with you during your visit. NTU is a powerful tool for keeping our technical workforce up to date -- thereby improving our ability to compete.

Additionally, I want to answer your question regarding EKTAR 25 film in 4x4 sheets. At this time, Kodak has not made a production run of 4x4 sheets on EKTAR 25 primarily due to the lack of customer demand. EKTAR sheets are coated on a different support base than that used for 35mm film. The size of the market is considered small at this time; therefore, it has not been made available in sheet size. If market evaluation of the demand increases, it may be available at a later date. I hope this is helpful for your friends. I am sorry that we are unable to accommodate them in the size that they need at this time.

Again, thanks for your visit, and if I can be of further assistance, please do not hesitate to call. Kodak is anxious to assist in all of the areas that we discussed during your visit.

Sincerely,

Billy R. Cooper
Manager

April 18, 1991

Dear Elaine:

Many thanks for the copy of your **Statement of U.S. Department of Transportation Research and Development Policy**. I found it to be a very interesting document and must admit that I was not at all aware of a number of the programs that are included in that report.

It is entirely clear that your department should be represented on a great many, if indeed, not all, of our FCCSET Committees and if you will send me the name and a cv of your Chief Scientist, I will make sure that he is invited to serve on these committees.

I recognize that you were a good soldier in sitting through all of the discussions at the most recent FCCSET meeting, and I would, however, ask that you remain as a member of the Council. Perhaps we could discuss what general class of issues you would wish to be involved in and I could give you some advance warning as to those meetings of the full FCCSET that include those topics.

I feel that it is extremely important for us to retain our firm policy that the FCCSET members hold either secretarial or deputy secretarial rank because I am convinced that this has been a critically important component of the success of FCCSET during this past two years as compared to its earlier history, and I would not wish to break the line because having once done so, I can well imagine that many agencies and departments would frequently find it more convenient to send more junior people.

Congratulations on your report **Moving America** and my personal thanks for your help with FCCSET.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

and Technology Policy
Executive Office of the President
Washington, DC 20506

Dear Allan:

I am enclosing a copy of A Statement of U.S. Department of Transportation Research and Development Policy. This statement is a key implementation element of the Statement of National Transportation Policy, issued by the President in March, 1990.

We will be using the document within the Department as a guide to program formulation by Research and Development (R&D) managers. We also intend to give the document a fair amount of exposure with the Congress, universities, the private sector, State and local governments, and the transportation community-at-large. We believe it provides a concise summary of the "ground rules" by which the Department makes its R&D decisions in support of the National Transportation Policy. Moreover, the Appendix to the document provides a detailed agenda of priority areas for research. We used this R&D Agenda last summer in a pilot project to screen the Department's FY 1992 budget requests prior to their submission to the Office of Management and Budget.

We believe this statement will help us assure effective identification of R&D activities and efficient utilization of our scarce R&D resources. I hope you find the document useful, and I look forward to any reactions or comments you may have.

Sincerely,

Elaine L. Chao

Dear Dr. Crosby:

Many thanks for your letter of June 6 which arrived while I was in the Soviet Union. I welcome the opportunity to contribute a letter that will be made available to Peter Raven on August 1, 1991 when you celebrate the 20th anniversary of Peter's arrival at the Missouri Botanical Garden. I have enclosed the letter as you suggest and would much appreciate your making it available to Peter at the appropriate time.

Again, my thanks for this opportunity to participate in what is a very happy event.

Sincerely yours,

D. Allan Bromley

July 9, 1991

Dear Peter:

I welcome this opportunity to add my congratulations on the occasion of your 20th anniversary at the Missouri Botanical Garden.

You can be justly proud of what you have achieved, not only in making the Missouri Botanical Garden one of the foremost institutions of its kind in the world, but also in terms of your own activities as one of the world's leading spokespersons for biological diversity and for a sane international environmental policy.

Through your activities at the Garden and as home secretary of the U.S. National Academy of Sciences, you are making vital contributions to the quality and direction of U.S. science and beyond that, world science, and all of us in the Nation are indebted to you for your exemplary leadership.

I count it a privilege to be allowed to join with your colleagues and friends in the Garden in forwarding this note of congratulations. May you have a very long, happy, rewarding, and continuing career on the frontiers of biological--and specifically botanical--sciences. Having read it with fascination I know that your textbook is introducing vast numbers of children to the tremendous adventure that we have been fortunate enough to share.

President Bush has asked that I convey to you both congratulations on this happy occasion and most sincere thanks from him and from Mrs. Bush. They salute you for your leadership and for the key role that you continue to play in making science accessible and attractive to American children.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Colleague:

Please pardon the impersonality of this note, but it is going out to about 2000 of Peter Raven's friends and colleagues. August 1, 1991, marks the twentieth anniversary of Peter's arrival here at the Missouri Botanical Garden, and I am writing to remind you of this fact and inviting you to send a letter of congratulations on his achievements to date, should you wish. We would like to surprise Peter with these letters, presenting them to him at our monthly all-Garden staff meeting, which will be on 21 August. I expect there will be literally hundreds of letters, and we will give them to him in a large mail bag. We would like to keep this a surprise, so if you wish to write a letter, please place it in an envelope addressed to him and then place that envelope in another envelope addressed to me, and mail it to me here at the Garden. I will then open the ones addressed to me and place the envelopes addressed to him in the mail bag for him on the 21st. Please do not fax your reply, since Peter often collects faxes from the machine, and in this way could discover what we are up to.

Sincerely yours,

Marshall R. Crosby

July 24, 1991

Dear Tom:

I am replying to your letter of July 9th in which you tell me of your intention to nominate Eugen Merzbacher for the National Medal of Science. This, of course, is a very appropriate nomination and you have assembled excellent references. Unfortunately, I must tell you that inasmuch as I get to make the final selection from the list that is submitted to the President by the President's Committee on the National Medal of Science before the final list is forwarded to the President, it would be entirely inappropriate for me to write a letter of reference for any of the candidates.

Despite my very high regard for Eugen Merzbacher as a scientist and as a scientific statesman, I know that you and he will understand the conflict of interest situation in which I find myself and I would urge you to replace me with someone who does not have such a conflict.

I can assure you that the nomination will be given full and serious consideration.

With all best wishes,

Sincerely yours,

Dear Allan:

Enclosed is a copy of completed forms which will nominate Eugen Merzbacher for the National Medal of Science. We would like to submit these forms before the deadline at the end of July. With each nomination a request is made for three references who are familiar with the qualifications of the nominee. You will note on page 5 that we have solicited as references: Ben Bederson at NYU, who knows Eugen's contributions to atomic physics; Nicolaas Bloembergen, who has worked closely with Eugen over the last two years in the American Physical Society; and we list your name as a third reference. I write, therefore, to ask if you are willing to serve in this capacity.

If you are willing to do this, please complete your letter of reference and mail it to arrive no later than August 30, 1991, to:

James F. Hays, Executive Secretary
President's Committee on the National Medal of Science
National Science Foundation
1800 G Street, NW
Washington, D.C. 20550

Many of Eugen's achievements are listed on the nomination form; others may be obtained from the attached curriculum vitae. Besides his research in atomic physics and the underlying principles of quantum mechanics, these include his central role in establishing and maintaining the strong nuclear physics program at the Triangle Universities Nuclear Laboratory and his contributions to the American Physical Society and the physics profession in general for over 40 years.

We thank you for taking time to consider this request and hope you will be willing to help us.

Sincerely yours,

THE WHITE HOUSE

WASHINGTON

July 30, 1991

Dear Marvin:

Mary Anne tells me of your interest in nominating me for the Yale Medal in 1992. I am not at all sure this is strictly kosher while I am on leave from my Henry Ford II Professorship, but I did want to tell you how very much I appreciated your willingness to do this.

Were you to do it, I would assume that the sorts of things that you might want to mention would include the fact that I founded the A.W. Nuclear Structure Laboratory in 1963 and served as its director until 1989. During that period it graduated more PhDs in experimental nuclear physics than any other institution in the world.

To list a variety of other possible items the following might be considered:

- o I served as Chairman of the Yale Physics Department from 1970 through 1977, a period of substantial growth in the Department.
- o Except during the years when I was Chairman, I taught both undergraduates and graduates and, in particular, established the course **Science and Public Policy** as one whose graduates have moved in large number both to the Congress and to the Administration.
- o In parallel with my Yale activities, I served as President of the American Association for the Advancement of Science, the world's largest scientific society, and as President of the International Union of Pure and Applied Physics, the world coordinating body for that particular science.
- o During 1969-1971 I chaired the National Academy of Sciences Physics Survey Committee which charted the course of that science for the coming decade.
- o My Yale activities have been recognized by election to the National Academy of Sciences, the American Academy of Arts and Sciences, and as a Benjamin Franklin Fellow of the Royal Society of Arts in London. I also hold 20 honorary doctorates from universities in Germany, France, Italy, South Africa, Canada, and the United States, and was awarded the U.S. National Medal of Science by President Reagan.
- o On leave from the Henry Ford II Professorship in Physics at Yale, I am serving as The Assistant to the President for Science and Technology and as Director of the Office of Science and Technology Policy in the Executive Office of the President.

Whether any or all of this is pertinent I leave up to you. And again, my warmest thanks for the thought.

In the event that your travels ever bring you to the Washington area, please do give me a little warning because I would be delighted to take you to lunch at the White House Mess and I think you would enjoy it. In any event, it would be great to compare notes because it has been far too long since our paths crossed.

With warmest best wishes,

Sincerely yours,

Mr. C. Marvin Curtis

THE WHITE HOUSE
WASHINGTON

July 30, 1991

Dear Mary Anne:

I am enclosing herewith a letter to Marvin whose address I do not have and would appreciate your passing it on to him. I am not at all sure that I am an appropriate candidate for this particular award since I am on leave but we will let Marvin figure this out.

I should tell you, incidentally, that the Corporation has just voted on the request of President Bush to extend my leave for a third year so that I can continue my activities here. From here on in the leave extends on an annual basis at the request of the President (or does not extend as the case may be!).

I am still looking forward to seeing you, Steve and Megan here in Washington.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

TO: AYA Assembly Delegates, Club Officers, Class Secretaries, Officers of Graduate Alumni Associations, University Council Members, Alumni Fund Directors, Yale Alumni Publications Board and Yale Development Board

FROM: Harvey Applebaum, Chair
Board of Governors

As you are aware, the Yale Medal is the highest honor awarded by the AYA. The Board invites you to nominate candidates for the 1992 Yale Medal.

Up to five Yale Medals can be awarded at the AYA Assembly in April 1992. These awards are based on the sole criterion of "outstanding service to Yale." Recipients do not necessarily have to be Yale degree holders, but they must be available to accept the award in person. As you consider nominations, please keep in mind our diverse population of alumni and friends. Many different paths can be taken to provide outstanding service to the University. Anyone whose service merits recognition is eligible except current members of the Yale Corporation, AYA Board members, and the University faculty and staff.

Nominations should be received by the Secretary no later than August 1, 1991. Enclosed is a nomination form and a reply envelope.

The Board and the Yale Medal Committee appreciate your assistance in identifying potential candidates of this prestigious award.

Dear Mr. Collins:

Thank you for your letter of July 15 commenting on the legislation on manufacturing technology encompassed in S.1330 and S.1328.

We share your appreciation for the role of manufacturing in the arena of international economic competitiveness. We have met with representatives of the National Coalition for Advanced Manufacturing and are aware of their paper on industrial modernization. The legislation to which you refer is under study by appropriate agencies of government. The Administration's position on the legislation remains to be developed.

Again, I deeply appreciate your input.

Sincerely,

D. Allan Bromley

OFFICE OF THE
DIRECTOR

July 15, 1991

The Honorable D. Allan Bromley
Presidential Advisor on Science
and Technology Policy
Room 358 Old Executive Office Building
Washington, D. C. 20506

Dear Mr. Bromley:

As you know, the steady decline in America's leadership position in manufacturing must become a national priority if we are to reverse the decline. The continuing loss of market share, the dangerously low level of investment in new plant and equipment, the surge in foreign acquisitions of some of our most advanced factories, the heavy concentration of federal R&D on defense and space showcase projects, the persistent trade deficit, the erosion of the domestic supplier base, shortage of highly-skilled workers are all attacking the economic security and standard of living of the American people.

Without a resurgence of manufacturing productivity and growth, the federal government will never garner sufficient revenues needed to eliminate the budget deficit and address America's pressing financial and domestic needs. Nor will the nation have the kind of robust domestic industrial base needed for its national security requirements and its ability to conduct an independent foreign policy.

A much closer spirit of cooperation between industry, government, and academia is needed to revitalize American manufacturing. One modest, but quite concrete step in this direction is the legislation introduced by Senator Hollins (S. 1330) and Senator Bingaman (S. 1328) on advanced manufacturing technology. These bills would (a) reprioritize federal R&D spending to give much greater prominence to advanced manufacturing technologies (currently only 1.7% of the Administration's proposed \$76 billion R&D budget) and (b) provide stronger federal support for state and local industrial technology extension programs (of special benefit to the 360,000 firms with fewer than 500 employees that represent 98.5% of the total number of manufacturing establishments in the U.S.).

Since funding for these efforts would come largely out of reprogramming existing funds within the relevant agencies (Commerce, Defense, Energy, NASA, and NSF), these bills would not require significant new federal spending. They would, however symbolize a federal commitment to join an overall national effort to modernize America's industrial base and create a new infrastructure of industry-government R&D partnerships and technical service centers.

Page Two
July 15, 1991

These bills originated in the private sector, in a strategy for federal action outlined in the October 1990 White Paper, which I helped to create, titled "Industrial Modernization: An American Imperative" prepared by the National Coalition for Advanced Manufacturing (NACFAM). NACFAM is a non-partisan, industry-led, organization with broad national support. My organization fully shares NACFAM's view that industrial competitiveness is a pressing national issue, not a partisan issue. The Hollings and Bingaman bills deserve the endorsement of both the Administration and the Congress and of both parties.

I would appreciate your personal support to this modest beginning and look forward to a growing momentum in the Congress regarding this important issue.

Best regards,

R. P. Collins
President & CEO

Dear Dr. Cattai:

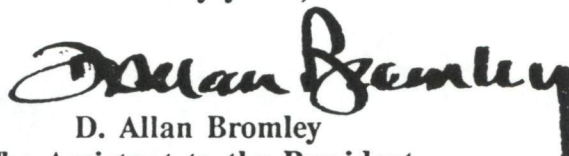

Thank you for your letter of July 8 inviting me to be a speaker at the Annual Meeting of the World Economic Forum scheduled to be held in February 1992 in Davos. I apologize for the belated response.

As much as I would like to join you, I must regretfully decline your kind invitation. The beginning of February is when the President's budget is released, and I must be on hand for that event.

I appreciate your thinking of me.

With all best wishes,

Sincerely yours,

July 31, 1991

Dear Jean-Pierre:

Many thanks for sending me a copy of your invited talk as given at the 7th Adriatic International Conference on Nuclear Physics. This is an excellent overview of the field and demonstrates very clearly that you and your colleagues are playing an ever more important role in this particular part of modern nuclear physics. I was delighted to get the overview because, as you I am sure will appreciate these days, I only have time to read a few papers in each issue of *Physical Review Letters* and to glance through *Physical Review C* so that I have frequently the feeling that I am completely losing touch with my professional roots. A beautifully prepared overview of this sort allows me to catch up in one part of the field in almost painless fashion and I am much indebted to you for it.

As I have told President Laustriat and Professor Gallmann, it is my intent to be in Strasbourg for the honorary degree celebrations on December 6th. I would expect to arrive sometime on December 5th and probably leave on December 7th or on the 8th at the latest. It will be a great pleasure for me to have the opportunity to see you and Jacqueline again and I very much look forward to it.

In the meantime, again my thanks for the report, and with all best wishes for every success and happiness,

Sincerely yours,

Dear Dr. Cowley:

Thank you for your July 8 letter inviting me to present the Keynote Address at the First Gordon Research Conference on Science Education. It would be a great honor to do so, and I would very much enjoy attending the meeting, but my schedule, even for next year, has already become so crowded that I must decline.

Thank you for your offer. I wish you the best of luck with the conference, and with the Gordon Research Conferences' foray into mathematics and science education. Perhaps I will be able to speak at some future meeting.

Sincerely yours,

D. Allan Bromley

THE WHITE HOUSE

WASHINGTON

September 19, 1991

Dear Praveen:

Many thanks for your note of August 28 with its copies of the two marvelous Japanese stamps showing the crystal structure of an oxide superconducting material.

It seems that almost every country in the world is prepared to recognize new scientific achievements on its postage except for the United States where on the last major effort of this sort the Post Office insisted on mislabeling their alleged brontosaurus. When I complained they responded only that even though that was not the scientifically correct designation, most people would think that it was and therefore, they could see no significant problem.

Your sending me these stamps does raise the question of whether we should not perhaps make a further effort to get some scientific content into our stamps. As someone, who in years past, was a fairly active stamp collector, I must say that we tend to have among the least imaginative and ugliest postage in the entire world. Just last week the Korean Foreign Minister showed me some of the recent Korean issues which, as in the past, really are quite beautiful.

If you have any bright ideas along this line, I would, of course, welcome them.

With all best wishes,

Sincerely yours,

Dear Allan:

I sent a number of my colleagues and friends postcards from Japan a few weeks ago. Nobody that I have been in touch with has received them and I assume you did not either. My purpose in sending you the postcard was to show you a recent stamp issued by the Japanese government commemorating a recent conference in Superconductivity, which I attended. In case you did not receive my postcard, I am enclosing a pair of stamps for your bemusement.

With best regards,

Sincerely yours,

Praveen Chaudhari

The Honorable D. Allan Bromley
Assistant to the President for
Science and Technology
The Old Executive Office Building
17th and Pennsylvania Avenue, N.W.
Washington, D.C. 20506

OFFICE OF THE
DIRECTOR

Dear Dr. Bromley:

The Council on Competitiveness is organizing a lecture series for the Smithsonian Institution on "Competitiveness and America's Future." I would like to invite you to be a speaker at one of the sessions of this series, entitled "Restoring the Edge in Commercial Technologies," on March 2, 1992.

We would like the session to address why the U.S. has been losing its lead in many technologies that are critical to both the commercial economy and national security, and what we should do to reverse the trends. Erich Bloch has agreed to be the other speaker on the panel.

The lecture is scheduled from 8:00 to 9:30 p.m. It would be ideal for each of you to speak for 20-30 minutes, to be followed by questions and answers. We expect an attendance of between 85 and 200 people, mostly Washington professionals.

The following pages provide more details on the course, topics, and speakers. Although most of the speakers listed are not confirmed, they provide an indication of the caliber of people we expect to have.

Because the Smithsonian's deadline for publishing their course catalog is short, we would appreciate your response as soon as possible. We hope very much that you will be able to participate in this session. I will contact your office in a few days to see if you are able to participate.

I look forward to being in touch,

Sincerely,

David W. Cheney

Competitiveness and America's Future

Monday evenings, 8-9:30 p.m.

U.S. industry has lost market share in leading edge industries from machine tools to computers, and the U.S. standard of living, economic influence, and leadership in technology have declined relative to that of leading European and Asian nations. The challenge is to improve the ability of U.S. companies and workers to produce world class goods and services while raising the U.S. standard of living. This course will examine the challenges posed by international competition for the United States in many areas, ranging from classrooms to research labs, and from the factory floor to the highest levels of industry and government.

1. January 13, 1992
Competitiveness and the American Dream. What is the relationship between competitiveness, the quality of life, and economic and national security? Does corporate nationality matter? Kent Hughes (President, Council on Competitiveness); Clyde Prestowitz (President of the Economic Strategy Institute and author of Trading Places), and Fred Bergsten, Director, Institute for International Economics and Chairman, Competitiveness Policy Council.
2. January 27, 1992
Facing the Competition: What it takes to compete in Japan. What competing in Japan has taught U.S. companies about product quality, relations with customers and suppliers, getting products to the market quickly, and industry-government cooperation. Rick Youts or Dick Heimlich, Motorola; Japanese executive.
3. February 3, 1992
Reinventing the Corporation: From Taylorism to TQM. Can a service economy support the nation? How manufacturing is becoming more like services. Why mass production is obsolete. How quality management, continuous improvement, and lean production are changing U.S. business. Dan Roos or Jim Womack (Authors of The Machine That Changed the World).
4. February 10, 1992
Competitive Advantage By Design. The role of design in making products that customers want to buy. The linkage between culture and design. Does exporting American culture aid U.S. competitiveness. Arnold Wasserman.

5. February 24, 1992
Competitiveness and the Environment: Conflict or Synergism? Do environmental regulations undermine competitiveness? Or do "green companies" know the color of money? Gus Speth, World Resources Institute; Representative of DOW or Dupont.

6. March 2, 1992
Restoring the Edge in Commercial Technologies. The United States is losing its historic lead in technologies that underlie both commercial products and defense systems. Why has this happened and what are the solutions? Erich Bloch (Distinguished Fellow, Council on Competitiveness, Former Director, National Science Foundation, Former Vice-President, IBM), Allan Bromley (Assistant to the President for Science and Technology).

7. March 9, 1992
Motivating and educating tomorrow's workforce. Education and training are perhaps the most critical elements in America's economic future. This session will discuss new ideas on education and training that can make a difference. Ira Magaziner, (author of America's Choice: High Skills or Low Wages), Dean Kamen (Inventor, Entrepreneur).

8. March 16, 1991
Culture and Competitiveness. To what extent will successful programs from other countries work here. Is corporate culture stronger than national culture? Will the unique features of American culture -- individualism, heterogeneity, mobility -- be advantages or disadvantages in the next decade? Does the export of American values help U.S. industry? Will declining economic strength lead to an adoption of foreign ideals? Hedrick Smith (author) or James Fallows (Atlantic Monthly, author).

THE SMITHSONIAN CAMPUS ON THE MALL

Campus on the Mall is an educational program operated by the Smithsonian Institution designed for the study of humanities, arts and sciences. Campus on the Mall offers over 200 lecture courses four terms per year. The primary goal of these diverse courses is to provide an intellectual context and critical framework for understanding world events. Campus courses typically use interactive formats such as performance/demonstrations and panel discussions and debates featuring leading experts. The intent is to make the courses both intellectually rigorous, as well as interesting. Campus on the Mall is designed for nonspecialists who have a high level of intellectual curiosity; participants typically include Washington DC-based professionals. Audience size ranges from 85 to 500 people, depending on the course.

In the social sciences, recent course offerings have included "The Shattered Empire: The Sources and Consequences of Reform in the Soviet Bloc since 1989"; "The New Germany: After Reunification"; "Covering the World in Turmoil: The Media and Society"; and "African American Entrepreneurs in the 1990s". Course speakers are leaders in their field, offering personal insight and analysis in their areas of expertise. The Smithsonian program offers a small honorarium to course speakers.

COUNCIL ROLE

The Smithsonian's Campus on the Mall has asked the Council on Competitiveness to organize an 8-part panel series on Competitiveness. The Council agreed to organize such a multi-part session because it strongly believes in the need to educate the public about competitiveness-related issues, and it sees this course as an opportunity to experiment with ways to make "competitiveness" accessible to a broad audience. The Council also intends to produce a book based on this seminar series.

THE COURSE ON COMPETITIVENESS

The enclosed course description and timetable provides more details of the Council's proposed panel series and gives you a better sense of how your panel fits into the overall course plan. The Competitiveness course will run from January 13 through March 16, meeting Monday evenings from 8:00 p.m. to 9:30 p.m. The venue for these seminars will be determined as the course draws nearer.

THE WHITE HOUSE
WASHINGTON

December 6, 1991

Dear Al:

Your point concerning the removal of the tax exemption for non-solicited prizes is an excellent one and your letter has stimulated me to take up this question with the Treasury Department.

Obviously, we will require some Congressional action to change the law in appropriate fashion and I have written to the Deputy Secretary of the Treasury, John Robson, to request his assistance in this matter.

I shall keep you informed.

In the meantime, let me thank you for bringing this to my attention and let me wish you every success and happiness in the upcoming New Year.

Sincerely yours,

D. Allan Bromley

Executive Office of the President
The White House
Washington, D. C. 20500

Dear Allan:

I would hope that you or your office constitutes an effective conduit to whomever it may be who would be able to take some action on the matter of the current provision in our tax laws that taxes all non-solicited prizes and awards for scientific and technological excellence (as well as such awards in all scholarly fields) as income.

The recently announced Nobel prizes in Science for 1991 showed that for the first time in many years no Americans were among the winners. The media and press noticed this and there have been comments concerning possible decline in our leading role in science and technology. Although it is true that Nobel prizes frequently recognize work carried out many years ago, there is nevertheless reason to be concerned about our present and future national leadership and competitiveness in science and technology.

As a small indication of our national concern and as an initiative (which incidentally would cost very little) perhaps Congress should reinstate the tax exempt status of Nobel prizes, which was eliminated in the last tax revision together with that of all non-solicited prizes and awards.

Since the Nobel Prizes are unique it would be especially symbolic to exempt them, but frankly, I think all such unsolicited prizes should be tax-free. They are tax-free in every other developed country I know of, even those that have generally stiffer tax codes than ours.

By the way, I very much enjoyed your story about the Mexican bandit. One so stricken in years as I am rarely hears a good story that he can't recall having heard before. This one was new to me.

Yours sincerely,

F. A. Cotton
