THE WHITE HOUSE
WASHINGTON

December 3, 1991

Dear Dr. Morrison:

Many thanks for your letter of November 29 in which you tell me of your work on the congressionally requested study of asteroid impact hazards and of Australian Prime Minister Hawke's interest in this topic. It is indeed important for us to obtain the necessary information so that we can brief President Bush adequately prior to his departure for Australia on December 30.

Unfortunately, on Thursday, December 5, I shall be in Europe and so will be unable to meet with you here. However, I will suggest that you call me associate, Dr. Karl Erb, and that you arrange with him to stop by to give him whatever information may be available at that time so that we can at least begin the process of getting material into the President's briefing book. You can reach Dr. Erb at 202/456-7116.

I shall look forward to your report and to the pleasure of meeting you at some later time. Again, many thanks for contacting me.

With all best wishes,

Sincerely yours,

D. Allan Bromley
The Assistant to the President

Reply to Attn of SS:245-1

29 November 1991

Dr. Alan Bromley, Director
Office of Science and Technology Policy
The White House
FAX 202 395 3261

Dear Dr. Bromley:

I am the Chair of a current International NASA Workshop investigating the hazards of asteroid impact with the Earth and preparing recommendations on an accelerated discovery program for such objects. This study was specifically requested of NASA by the Congress (House Authorization Bill, FY91). I have just been informed by one of the Australian members of our Workshop that the issue of asteroid hazard and detection is being proposed by Australian Prime Minister Hawke for the agenda of his 29 December meeting with President Bush. Since I expect that the White House may not be aware of the current Congressional-NASA study of this problem, I am taking the liberty of alerting you.

If asteroid detection is to be discussed between Prime Minister Hawke and President Bush, I will be happy to provide any information you may want. The report of our Workshop is in the final stages of editing and will be completed by 29 December. In addition, I will be in Washington this next Thursday, 5 December, to report at NASA Headquarters on our progress. If it would be useful for me to stop by OSTP to provide a short briefing I will be glad to do so. Please let me know if I should schedule such a visit.

Yours truly,

A handwritten signature in dark ink, appearing to read "D. Morrison", with a stylized flourish at the end.

David Morrison
Chief, Space Science Division, NASA Ames Research Center
Chair, International NEO Detection Workshop

THE WHITE HOUSE
WASHINGTON

December 4, 1991

Dear Angie and Jim:

It was great to get both your notes and a tremendous pleasure to have you here for lunch. Clearly, this is something we must do again and soon. Whenever it looks like you might have some reason to be in the Washington area or even if I can perhaps provide such a reason, please do let me know so that we can arrange to get together again.

The trip to Europe was indeed a hectic one but extremely productive and, fortunately, immediately following it I was able to go to my place in Canada where both Lynn and her new husband, as well as David and his wife and two daughters were able to join me. We had wonderful weather and a wonderful time. I have been back to Europe twice since then and to Japan so life continues on a somewhat hectic plane. I suspect that for the remainder of this year and next, as we work up to an election, life will become increasingly chaotic and sometimes exciting.

I very much hope that the upcoming New Year brings both of you every happiness and every success and I will look forward to the pleasure of having you here in Washington as soon as that is convenient for you.

With every good wish,

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

Professor and Mrs. James B. Maher
Department of Physics
University of Pittsburgh
Pittsburgh, Pennsylvania 15260

9/19/91

Dear Allan,

I'm sorry to be so slow in writing to thank you for the delightful time Angie and I had visiting you at the end of July. Not only was it wonderful to have a chance to visit you but clearly the setting and circumstances were something to tell one's grandchildren about.

I hope you had a good trip to Europe in August. It sounded much too hectic! I'm off to a physics/biology pattern formation meeting in Granada on October 3. I'm happy to have been invited to talk and looking forward to seeing southern Spain for the first time but very skeptical about getting the biologists to listen.

Family life is quiet around here with both of
the children gone. There is however a slowly growing
level of activity connected with Robin's wedding
(planned for July). She'll be the same age as we were
at our wedding, but it's hard for me to believe that
I seemed that young at the time.

Thank you again for your hospitality last
summer (and for the cuff links), and I'm sorry to be
such a poor correspondent. Please let us know how
you're doing.

Best regards,
Jim

9/19/91

Dear Allan,

I, also, wanted to thank you for a wonderful lunch - and for the stick pin and the opportunity to share in real Washington lore. Your stories of microdots and spy watches are the stuff of which stories of international intrigue are made! You gave us the chance of a lifetime to see the working White House and hear how a Presidential Advisor works within a complicated system. Your job seems to suit you very, very well! I can't think of anyone who could do it better or be more effective. Thank you for letting us share it with ^{you} for a couple of hours.

Fondly,

Ange

P.S. Sitting in the Big Dug's seat in the White House lunch room was a real honor!

THE WHITE HOUSE
WASHINGTON

December 3, 1991

Dear Dick:

I am delighted to know that you have hooked up with the Woodrow Wilson Center and I hope that you have been enjoying your time there. I very much regret the long delay in answering your letter in which you suggest the possibility of adding Craig Fields to PCAST, but I have been holding off to see whether any further vacancies would develop in the PCAST membership as at one time seemed possible. As you know, Bernadine Healy and Walter Massey necessarily resigned from PCAST when they took up their positions as Directors of NIH and NSF, respectively. They were replaced by Dr. Mary Good, the former Chairman of the National Science Board and Executive Vice President of Allied-Signal, and by Tom Murrin, the former Deputy Secretary of Commerce and now Dean of the Business School at Duquesne University. I had thought that there might be an additional vacancy but it turns out that the member in question has changed his plans and will remain.

Your suggestion is nonetheless an excellent one that I will keep in mind. Craig Fields is someone whom I got to know quite well during our period of overlap here and someone who has enormous capabilities in the technology area.

I must say that we miss you in our interactions with the Department of State but let me take this occasion to wish you a very happy, successful, and rewarding 1992.

Sincerely yours,

D. Allan Bromley

RECEIVED

31 AUG 12 A10:43

OFFICE OF THE
DIRECTOR

August 9, 1991

Dear Allen;

Many thanks for your very kind and generous letter which arrived last week.

In the meantime, I have hooked up with the Woodrow Wilson Center for a few months of reflection and decompression. I expect a serious effort to locate something permanent next month. All ideas welcome!

Good luck with your important work.

Sincerely;

Richard McCormack

P.S. I had breakfast this morning with Craig Fields, whom I had known when he previously served in DARPA. I strongly recommend that you include him in PCAST. Not everyone will agree with all of his ideas, but this man really does have something to offer, and I think that the President would find him an interesting contributor to any discussion. The general complex of issues relating to U.S. competitiveness is clearly going to be at the top of the coming campaign, and it is obviously important that the President be extremely well briefed on the issues involved. Fields would be very helpful in exposing the President to what he is going to hear during the Presidential debates in 1992.

THE WHITE HOUSE
WASHINGTON

December 2, 1991

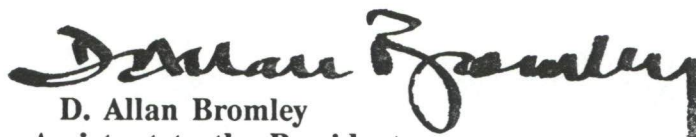

Dear Mr. Murphy:

Many thanks for sending me a copy of your book **Nuclear Power: The Promise of New Technologies**. I found this to be extremely interesting and helpful because I believe that the nuclear power option offers the only hope of providing the large blocks of electrical energy that our society will need in the future. I am very much interested in the development of advanced new technologies in the area that can provide greater assurance to our public of the desirable aspects of nuclear energy and allay some of the all too understandable fears that have developed among the public as result of media coverage of the issues involved.

Let me congratulate you and all involved on this very significant contribution to the current discussions and to public understanding of the issues involved. If and when you produce additional reports in this area I should very much appreciate receiving copies.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

*Excellent
book*

Dear Dr. Bromley:

I am pleased to send you a copy of Nuclear Power: The Promise of New Technologies, the latest paper in the CSIS Significant Issue Series. The foreword and preface frame the issues discussed in the body of the report and the authors' conclusions are presented in chapter 6.

In this report Charles K. Ebinger, John P. Banks, and Margaret S. Morgan have examined the role of second generation nuclear technology in the broader context of current U.S. and global energy, electricity, economic, technological, regulatory, and environmental trends. The authors conclude that the passive safety features of second generation nuclear technologies, in combination with their smaller plant sizes and simpler designs, can overcome many of the problems associated with nuclear power development in the past. They believe that second generation technologies have tremendous potential to provide safe, environmentally sound, and economically competitive electricity supplies to the United States and the international community.

We at the Center for Strategic and International Studies believe the possibilities examined in the enclosed report deserve thoughtful consideration and wide discussion in view of the critical energy choices facing the country.

If you have any questions or comments, please call Dr. Ernest Graves at (202) 775-3220.

Sincerely,

A handwritten signature in dark ink, appearing to read "R. Murphy", written over the word "Sincerely,".

Dear Mr. Mooney:

Thank you for your letter of September 25 inviting me to attend your **41st Annual Convention and Exposition** scheduled for May 3-6, 1992, in Dallas, Texas. My apologies for the much belated response.

As you can appreciate, the number of invitations I receive that entail traveling out of town is overwhelming and I am finding that I cannot be away from Washington as much as I would like. As much as I would like to join you and your colleagues, the next several months are already heavily committed, so I must regretfully decline.

I appreciate your thinking of me and would like to offer my best wishes for your symposium.

Sincerely yours,

D. Allan Bromley

17th St. and Pennsylvania Avenue, N.W.
Washington, D.C. 20506

Dear Mr. Bromley:

On behalf of the National Cable Television Association, it is my pleasure to extend to you a complimentary invitation to join us for our 41st Annual Convention and Exposition to be held May 3-6, 1992, in Dallas, Texas.

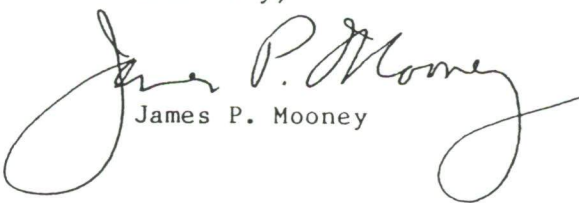

The NCTA Convention and Exposition is the most prestigious, widely-attended forum for the cable industry. Last year's convention drew nearly 14,000 delegates and 300 exhibiting companies. In addition to cable, the convention is heavily attended by representatives from the motion picture, satellite communication, broadcast, program supply, telecommunications hardware, telephone and consumer electronics industries.

Enclosed you will find our promotional newsletter containing a complimentary program registration form as well as a preliminary schedule of convention activities. If you are able to join us, please complete and return the form to NCTA at your earliest convenience. If you have any questions, please do not hesitate to call Roanne Robinson, NCTA Director for Industry Affairs, at 202/775-3669.

We hope your schedule will allow you to accept our invitation, so that you may join us as we gather to discuss the important issues facing the cable television industry.

With best regards.

Sincerely,

James P. Mooney

September 20, 1991

Dear George:

Many thanks for your letter of September 3 which arrived when I was out of the country. I do indeed recall our discussion during the inauguration festivities for Don Langenberg and the fact that, as the oldest utility in the United States, you will be celebrating your 175th anniversary.

Thank you for sending me a copy of your letter to the President. I shall be happy to add my recommendation that he accept that invitation because it does fit very well with his interests in technology and could provide an opportunity for him to give a major talk on the topic.

You do not mention, either in your letter to the President or in your letter to me, when precisely you plan the festivities and I am assuming that your thought is to try to fit them to the President's schedule. The way the scheduling process works is that no commitment is made for Presidential participation in any event until, at most, six weeks to two months prior to the event and so I would suggest that you give the President either a selection of dates that would otherwise be convenient for you or a time period so that it can get into the scheduling process even though you will hear nothing definite until the interval before the event that I have just mentioned.

It was good to see you in June and I too look forward to seeing you again soon.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Allan:

I trust you are finding a little time to relax this summer, although from what I read of your activities, you appear to be keeping rather busy.

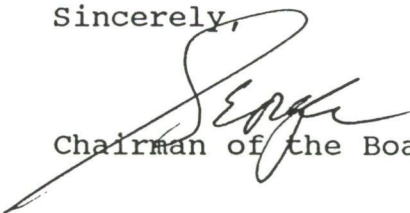

It was really great to have you here in Baltimore for Don Langenberg's inauguration on June 26, and you certainly provided the perfect touch to a very special day.

You may recall our brief conversation during the luncheon on June 26, regarding our Company's 175th Anniversary. As I mentioned to you, we are the oldest utility in the United States, and we thought something special should be done to recognize this occasion. We believe this will provide an opportunity for the President to come to Baltimore, not only to recognize America's first utility, but to address his National Energy Strategy.

An invitation has been extended to the President to join us for this special occasion, and I am enclosing a copy of that letter. We will certainly appreciate your help and support in encouraging the President to accept this invitation.

Please do not hesitate to call me if you have any questions or suggestions. Hope to see you soon.

Sincerely,

Chairman of the Board

August 30, 1991

President George Bush
The White House
1600 Pennsylvania Avenue, N.W.
Washington, D.C. 20500

Dear Mr. President:

It is a pleasure and honor for me to invite you to a special event commemorating the Baltimore Gas and Electric Company's 175th Anniversary.

It was 175 years ago--before the railroads, even before the completion of the National Road connecting the East Coast to the West-- that Rembrandt Peale, artist and entrepreneur, started the Gas Light Company of Baltimore to light the streets and homes of the city. **It was the first gas utility in the New World, and Baltimore Gas and Electric is its direct descendant.**

The pioneering Gas Light Company of Baltimore started with a few thousand dollars in assets, five unusually able men, and one bright idea--to light the city. Now, with more than \$6.7 billion in assets, the Company employs more than 9,000 talented and dedicated employees to meet the energy needs of more than 1 million electric and 500,000 gas customers in Central Maryland. With that as background, the management and employees of BG&E are proud of Rembrandt Peale's legacy, which has evolved into a pre-eminently well-managed, high-performance energy supplier. Our mission has remained the same over 175 years--to provide a reliable and economical source of energy to our customers.

As we draw closer to the end of this historically significant year, we are engaged in planning a special commemorative event highlighting our anniversary. I recognize the incredible demands on your time; nonetheless, I invite you to participate in this event.

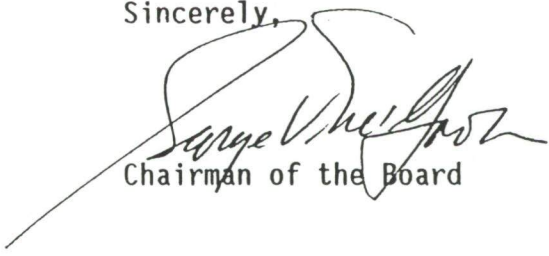

Over the past year, we have witnessed the serious need for a strong energy policy in this country. Your Administration, particularly through the leadership of Admiral Watkins, has given us such an initiative in the National Energy Strategy. As Chairman of an energy company, I have endorsed and applauded your efforts to move our country toward a viable and sound energy future. Perhaps our celebration as the oldest utility in the New World will provide a forum for you to address your energy agenda.

President George Bush
August 30, 1991
Page 2

The proximity of the city of Baltimore, our Orioles baseball team, and the growing number of Republicans in a traditionally Democratic state are perhaps additional features that may enhance this invitation. We are totally flexible as to date and forum.

I am available for any questions or comments and look forward to your favorable reply.

Sincerely,

Chairman of the Board

THE WHITE HOUSE

WASHINGTON

July 31, 1991

Dear Ms. McGinnis:

I am responding very belatedly to your letter of June 11, 1991 in which you indicate your interest in the possibility of a position here in Washington.

I regret that I must tell you that having looked carefully into this situation I really have no suitable position to offer you despite your interesting background and curriculum vitae.

As you may know, all agencies of the Federal Government are under very stringent pressures to reduce personnel costs and it is almost impossible to add new positions at the present time.

Let me therefore only thank you for your interest in the possibility of joining us and wish you every success in your search for a suitable position elsewhere. It was a pleasure meeting you, albeit very briefly, at Fordham.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D." being small and the last name "Bromley" being larger and more prominent.

DIRECTOR

DEAR DR. BROMLEY;

IT WAS A FINE HONOR TO HAVE HAD THE PLEASURE OF YOUR BRIEF ACQUAINTANCE AT THE WONDERFUL AFTER LECTURE DINNER AT FORDHAM UNIVERSITY. I HURREDLY INTRODUCED MYSELF BEFORE YOU RUSHED TO RETURN TO WASHINGTON. UPON MY OWN RETURN TO OHIO AS PER YOUR KIND SUGGESTION, I PLACED A CALL TO YOUR OFFICE TO INFORM YOU OF AN UPCOMING VISIT TO D.C. IT WAS UNFORTUNATE I WAS UNABLE TO REACH YOU. HOWEVER, YOUR SECRETARY SUGGESTED I CALL AGAIN DURING MY NEXT TRIP.

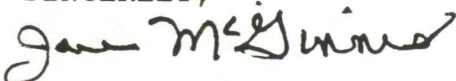

I DO REALISE THE MAGNITUDE AND IMPORTANCE OF YOUR ENGAGEMENT SCHEDULES. THEREFORE, RATHER THAN CALLING TO CAUSE TOO MUCH DISTURBANCE, I AM SENDING MY CURRICULUM VITAE FOR PERUSAL IF PERCHANCE YOU DISCOVER A FEW SECONDS DURING YOUR BUSY WORK SCHEDULE. ALONG WITH THE VITAE I AM FORWARDING A PARTIAL CURRICULUM GUIDE ON NATURAL RESOURCES WITH WHICH I WAS INVOLVED IN THE ORIGINAL GROUNDWORK DEVELOPMENT, NETWORKING, AND DRAFT. FROM THIS CURRICULUM DEVELOPMENT AND IMPLEMENTATION COMES THE STUDY FOR MY DISSERTATION.

ALBEIT SIMPLISTIC, UPON COMPLETION, MY WORK WILL LEAD TO A PLACE IN THE SUN WHERE I MIGHT REDEFINE MY OWN STATE OF TRUTH SEARCHING.

I SINCERELY WISH TO CONTRIBUTE TO HIGHER EDUCATION THROUGH RESEARCH AND DEVELOPMENT. I AM STRIVING TO COMPLETE AND DEFEND THE DISSERTATION PRIOR TO THE END OF AUGUST. AT THAT TIME I WOULD WISH TO RETURN TO WASHINGTON OR THE EAST COAST.

BEST WISHES IN CONTINUING YOUR MOST EXCELLENT POSITION AS DIRECTOR OF THE OFFICE OF SCIENCE AND TECHNOLOGY. WE ARE HAPPILY PLEASED WITH GEORGE BUSH'S IDEAS AND PERFORMANCE.

SINCERELY,

JANE MCGINNIS

THE WHITE HOUSE
WASHINGTON

July 9, 1991

Dear John:

It was good to hear from you after a long break in our communications and also good to hear you coming out in favor of the gravity wave experiment.

I have the unfortunate feeling, however, that this is simply not going to be the year when that particular large experiment gets started.

As you may have noted in the NSF budget, we have asked for an 18 percent increase in Fiscal Year '92 which would put the Foundation back on the doubling trajectory that David Packard and I recommended originally back in 1986 and which has been accepted by both Presidents Reagan and Bush. What is different this year is that I have insisted that 16 percent increases actually find their way through the NSF bureaucracy all the way down to the brand name sciences like, physics, chemistry, biology and engineering where in the past this did not happen. All too frequently, even though we got large increases for NSF, the additional funding went to new activities of environmental and other sorts so that very little of the funding was available to support individual researchers at the Nation's universities. That situation had become rather serious. In addition to what we are doing at NSF, we have requested something like a 10 percent increase in the funding for individual investigators through the National Institutes of Health and, between NIH and NSF they cover more than 80 percent of all the academic research in the Nation.

I had occasion a few months ago to have dinner with the UNC Board and although many of the members have now changed, it is apparently a company on its way back to some kind of financial stability. Dan Colussy has managed to eliminate everything but the aviation maintenance companies and they, at least, appear to be making profits.

As you undoubtedly know, Justin Davidson unhappily has been diagnosed as having fairly advanced Alzheimers' and I saw him and Shirley when I was at Ohio State for a commencement address a month or so ago. He still manages remarkably well but at the same time is obviously operating under very severe difficulties as far as memory is concerned.

I must say that I miss the old UNC Board and the fellowship that was part of our meetings.

With warmest best wishes to both you and Betty. May you have a happy and healthy year and may you find some parts of the earth that you have not previously visited that are both exciting and rewarding.

Sincerely yours,

JOHN R. MENKE

June 6, 1991

Dear Allan:

One small voice
for the LIGO Gravity Wave
Experiment. There is no
"Michelson-Morley" confirmation
anywhere of the gravity theories.
It is experiments which create
the surprises and gravity can
have one or two.

[I have no personal
interest in this recommendation!]

Best, John M.

& other than love for the physics of it

THE WHITE HOUSE
WASHINGTON

July 9, 1991

PLEASE FORWARD

Dear Richard:

I have not had the time to really wade through the piles for correspondence on my desk for several months because of extended travel to the Soviet Union and elsewhere.

I want in particular to thank you for your very generous comments in your memorandum for Larry Eagleburger, dated April 5. Your support in this whole matter of getting technology policy airborne without having it shot down in the guise of a dreaded industrial policy has been very much appreciated and I have enjoyed our interactions since my arrival here in Washington.

Larry has been so tied up with the aftermath of Desert Storm that it has simply not been possible to get together with him, but I shall certainly make every effort to do so.

Let me take this opportunity to wish you every success, both personal and professional, in your new endeavors. Whenever they bring you back here to Washington I would welcome the opportunity to invite you to join me for lunch at the White House Mess. Please do let us keep in touch.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

MEMORANDUM FOR LARRY EAGLEBURGER

FROM: Richard T. McCormack *Carl*
SUBJECT: The Council on Competitiveness Report

Gene McAllister has forwarded to you a summary of the report of the Council on Competitiveness that outlines some serious technological challenges facing us as a country. He recommends that you receive these people, and do a little more PR on behalf of the Department of State with the U.S. business community.

There is nothing wrong with his proposals. I would recommend that you go beyond this, and see what can be done to advance the cause outlined by the report itself.

You'll discover a lot of garbage tending on the part of some people about "industrial policy" implications of the Council's report.

The fact is that we won World War II with "industrial policy". We launched our space program with "industrial policy". We are today living off the intellectual legacy of the post sputnik efforts launched by the Eisenhower/Kennedy administrations. And in my view, we need to disengage ourselves from the knee-jerk, cliché-ridden debate about "industrial policy", and consider what we can do about the problems identified by Inman and his people. This will involve budgetary considerations, but in my view, they need to be undertaken.

The first step I recommend would be a long, private conversation between you and Allan Bromley, the President's Science Advisor. Bromley is one of the ablest people of the entire administration, and you would profit from interacting with him in this matter.

THE WHITE HOUSE
WASHINGTON

July 9, 1991

Dear Melissa:

Many thanks for your letter of June 20th in which you introduce your friend and classmate, Tony Kingsley, who is a newly minted Harvard Business School MBA.

I do not have any immediate openings in my office available in the environmental field, but I have taken the liberty of circulating Tony's resume and the paper that you provided to a number of other folk who might well be interested in his talents. As soon as I hear anything from them I shall, of course, let you know. He sounds like a very interesting young man.

Since I find myself horribly overcommitted these days I would suggest that Tony arrange to talk to the senior person in my office worrying about environmental matters. She is Dr. Nancy Maynard who has a background in marine biology and who has spent years worrying about oil spills in Alaska, Coral reef deterioration in the tropics, as well as serving as Executive Director of the National Academy of Sciences Environmental Science Board and most recently before joining me as my Assistant Director for Environmental Science, she was head of the Oceans and Ice Branch of NASA at Goddard. She will be able to steer Tony in the right direction.

I am looking forward to seeing your film at the earliest opportunity and hope that all goes well with you. Please let me know whenever your travels next bring you to Washington; I would look forward to seeing you.

Sincerely yours,

D. Allan Bromley

THE WHITE HOUSE
WASHINGTON

July 9, 1991

Dear Bob:

This is a very belated reply to your letter of April 15th in which you raise the question of how you might be able to assist in our Federal activities.

I have not forgotten your offer and it is still a very important one. Unfortunately, there have been sufficient developments since we last met that I have either been tied up completely here in Washington, or travelling to the Soviet Union and other parts of the planet and have not had a proper opportunity to reply to you.

Let me assure you that I have your name on file as a willing and able volunteer and as soon as an appropriate slot turns up I shall be in touch.

It was a great pleasure seeing you at the YSEA Award dinner.

Sincerely yours,

D. Allan Bromley

THE WHITE HOUSE
WASHINGTON

May 9, 1991

Dear Jim:

A former colleague has written to me to describe his success in developing a technique to check the seals of mixed oxide (MOX) fuel assemblies. Enclosed is a copy of his letter. He feels that this work might open the door to the use of MOX fuel in this country and the associated economic advantages. I would be very appreciative if your experts in the Department of Energy could examine this possibility.

Sincerely yours,

D. Allan Bromley
Assistant to the President
for
Science and Technology

Dear Allan:

Further to our brief conversation at the NAS Members' Meeting on Tuesday, it would be helpful to know if your travel schedule in November has relaxed enough to reconsider speaking to our Forum on Saturday afternoon, November 16th.

Please understand that we are sensitive to the extraordinarily heavy load you are carrying and do not wish to add complications to your busy schedule. Should your schedule permit, we would be honored to hear your views. Mrs. Thatcher, too, is still weighing our invitation against her busy schedule.

A brief prospectus is enclosed as well as a tentative agenda.

With every good wish,

Sincerely yours,

Tom

Dear Professor Bromley,

Some weeks ago you received an invitation* from me to attend the International Conference on an Agenda of Science for Environment and Development into the 21st Century (ASCEND 21) (24-29 November, Vienna, Austria).

The Advisory Committee for ASCEND 21 feels that it would greatly assist a successful outcome of the Conference if you were able to participate, at least on the opening day (Monday, November 25th), although of course your presence for a longer period would also be much appreciated. The opening session on the morning of that day will be devoted to addresses by representatives of the organizers and one or two selected key-note speakers. The afternoon will be devoted to parallel Working Sessions on Themes 1 to 5. In the evening it is proposed to hold a 2 1/2 hour panel discussion on the Theme of "Science for Environment and Development". The Advisory Committee would be most appreciative if you were available to take part in that panel discussion. This would involve making one of five or six 15 minute presentations and taking part in the subsequent general discussion.

I realize that there are many demands on your time but feel that you are particularly qualified on the basis of your own experience to contribute substantially to the panel discussion and in setting a tone and context for the work of the Conference.

May I request that you respond by telefax, telex or electronic mail within the next few days.

With best regards,

Yours sincerely,

M.G.K. Menon
President, ICSU

Paris, 16 April 1991

Dear Professor Bromley,

You are undoubtedly aware that there will be a major UN Conference on Environment and Development (UNCED) in Rio de Janeiro, Brazil in June 1992. The International Council of Scientific Unions has agreed to be the principal scientific advisor to this Conference. A major part of ICSU's task in this connection is the organization of a scientific conference which has been named the *International Conference on an Agenda of Science for Environment and Development into the 21st Century (ASCEND 21)*. Documentation describing this Conference is enclosed with this letter.

The Bureau of the Advisory Committee for the ASCEND 21 Conference invites you to participate in the Conference. Attendance at this Conference is by invitation only, and each of the 200 attendees is invited in his or her personal capacity.

You will note that the ASCEND 21 Conference is essentially a Working Conference aimed at developing strategies for the future. Reviewing the past will be undertaken only to the extent that it will help in this task.

It will be assumed that all participants are able to read and understand English. Thus all written material and all verbal presentations will be in English. However, simultaneous interpretation services, in English, French and Spanish will be made available during discussion periods, so that those more comfortable in French and Spanish may express themselves freely. In the first instance the Conference proceedings, which will include the final written papers, will be published in English. Translations into other languages may follow in due course.

Funds are available to support travel and living expenses of participants from developing countries. We trust that other participants will be able to find support from other sources, or that they will let us know if we can assist them in this.

I am sure that you will recognize the importance of this Conference. By participating in it, you will be able to influence the directions taken by UNCED, and the course to be followed by science for environment and development for decades to come. I urge you to accept.

Please respond by telefax, telex or electronic mail within the next few days.

I look forward to our cooperation in ASCEND 21.

Yours sincerely,

A handwritten signature in dark ink, appearing to read "M.G.K. Menon". The signature is written in a cursive, flowing style with a horizontal line underneath the name.

M.G.K. Menon
President, ICSU

Enclosures

THE WHITE HOUSE

WASHINGTON

June 4, 1991

Dear Mr. Miller:

Thank you for your letter of April 4, 1991, inviting me to address your business conference scheduled to be held November 14-15, 1991 in Washington, D.C. I apologize for the much belated response.

As much as I would like to join you and your colleagues, I must regretfully decline. I will be chairing a two-day meeting that has been on my calendar for some time on those dates.

I appreciate your thinking of me and send my best wishes for a successful conference.

Sincerely yours,

A handwritten signature in dark ink, reading "D. Allan Bromley". The signature is written in a cursive, flowing style. The first name "D." is small and followed by "Allan" in a larger, more prominent script. "Bromley" is written in a similar cursive style, ending with a small flourish.

D. Allan Bromley
The Assistant to the President

Washington, D.C. 20506

Dear Dr. Bromley,

McGraw-Hill's Performance Materials publication and the consulting firm Kline & Company, which concentrates on advanced materials, will hold a two-day business conference in Washington November 14-15, 1991 for executives in the advanced materials industry.

We would very much appreciate it if you would consider speaking during either of the two days.

The event's theme is "Advanced Composites—Beyond Aerospace in the 1990s" and the audience will be 50 to 100 of the top decision-makers in the advanced materials industry—from presidents of companies to directors of business development. No other event in the near future will bring together so many of this country's key leaders from the advanced materials industry.

Your topic would be fully up to you, though I would suggest it concern the Administration's doctrine for advanced materials and how the industry could play a role. Other possible areas could include the Critical Technologies Institute or critical technologies research in general.

I have worked with Perry Lindstrom and attended various PCAST meetings during the past year and have appreciated your elevation of advanced materials to the top of the Administration's technology agenda.

Performance Materials is the leading publication for business news on advanced materials and is read in more than 20 countries. Kline & Company is based in Fairfield, N.J., with offices in Brussels, Melbourne, Tokyo and Toronto, and is the top U.S. consulting firm on advanced materials.

Please consider this event and the captive audience of advanced materials leaders you would be addressing. My direct line is 202-822-4681.

Sincerely,

Michael S. Miller

Dear Barry:

Thank you for your invitation to the meeting at Fermi Lab to discuss the possibility of creating a sister center of the International Center of Theoretical Physics in the USA. Unfortunately, neither I, nor Tom Ratchford, my Associate Director responsible for international affairs will be able to attend.

As I wrote to Abdus Salam, the idea is an interesting one. However, I doubt that it would be practical to initiate such a center now, given our budget constraints. I will, of course, be pleased to receive any written record of the discussions.

Sincerely,

D. Allan Bromley

Dr. D. Allan Bromley
Assistant to President Bush
and Director, Office of Science & Technology Policy
Old Executive Office Building, The White House
Washington, D.C. 20506

Dear Allan,

Thank you for your support of the idea to create a sister center of International Center of Theoretical Physics in the U.S.A.. Last December, I went to Paris to discuss the matter with the high officials of the UNESCO. I have now been fully assured by them that the UNESCO is likely to provide both the financial and diplomatic supports for such an institute in the U.S.A.. The level of the support is anticipated to be similar to its support to the center at Trieste.

This is a enormous good will gesture on the part of the UNESCO. The U.S.A. has not provided its share for years to the UNESCO; still it is willing to support an institution in the U.S.A.. I believe that it is time for the U.S.A. to come forward and respond positively and in kind to the letter of Mr. Federico Mayor, the current director-general of the UNESCO. I am enclosing herewith a copy of that letter.

It is my impression that the UNESCO is looking for a minimum commitment of \$300,000 to half a million dollars annually from the non-UN sources and facilities such as the access to computers and libraries. I should be most thankful to you, if you could come forward with a bold and imaginative idea about it. I should appreciate learning about it before May 16, 1991, when I have convened a meeting of interested parties at Fermi Lab.

Furthermore, I invite you or your designated representatives to attend this meeting which is called to discuss various possibilities about this proposal. I shall also be very happy to invite any other persons you may suggest. The meeting is at Fermi Lab on May 16, Thursday, at 1:30

Dr. D. Allan Bromley
Page 2
4/25/91

P.M.. A list of the proposed invitees is attached herewith. It will be in comitium conference room located at the second floor of the main building.

I am looking forward to your leadership and suggestions in creating this center.

As always, my warmest regards,

Sincerely yours,

Bary

Suggested list of the participants at the meeting on May 16, 1991 at 1:30 P. M. at Fermi Lab to discuss the possibility of creating an International Center for Theoretical Physics in the U.S.A. sponsored by the UNESCO.

1. Dr. John Peoples, Director, Fermi Lab.
2. Dr. Leon Lederman, President, AAAS
3. Dr. D. Allan Bromley or his representative, Office of Science and Technology Planning.
4. Dr. W. Blanpied, NSF and APS.
5. Dr. Walter Massey, Vice President, The University of Chicago.
6. Dr. John Yopp, Associate Vice President, Southern Illinois University at Carbondale.
7. Dr. Robert Bender, Associate Vice President, The University of Illinois.
8. Dr. Paul Auvil, Associate Vice President, Northwestern University.
9. Dr. Roy Rubenstein, Fermi Lab and APS.
10. Dr. L. McLarren, Director, Theory Institute, The University of Minnesota.
11. Dr. C. Will, Chairperson, Physics Department, Washington University.
12. Dr. W. Halperin, Chairperson, Physics Department, Northwestern University.
13. Dr. A. Anderson, Chairperson, Physics Department, The University of Illinois.
14. Dr. D. Ernst, Texas A and M.
15. Dr. Phil Siemens, Oregon State University.
16. Dr. Johan Baumler, UNDP.
17. Dr. F. B. Malik, Southern Illinois University at Carbondale.

reference: DG/2.4/SR/3211

12 FEB 1991

Dear Professor Malik,

Following your discussions with the Assistant Director-General for Science, Dr Adnan Badran, and the staff of the Science Sector, I am pleased to write to confirm our interest in the proposed establishment of a Unesco International Centre for Theoretical Physics in the USA, which would provide post-doctoral research opportunities and advanced training for scientists from developing countries.

I believe this proposal is all the more attractive since universities in the United States are already the source of doctoral level training for a very large proportion of scientists from developing countries. On their return home, many of these scientists face enormous difficulties in continuing their research since they are obliged to work in nearly complete isolation from their peers, relying solely on their own intellectual and material resources. The proposed International Centre could contribute in a significant way to alleviating the problems of US-trained physicists from developing countries by providing them with opportunities to 'recharge their batteries' (to quote Professor Abdus Salam) and offering follow-up support in much the same way as the IAEA/Unesco International Centre for Theoretical Physics (ICTP) in Trieste (Italy) has been doing for over twenty years.

I am pleased to know that the University of Minnesota and the University of Illinois at Urbana are both interested in hosting the proposed Centre, as are - possibly - other universities and laboratories in the Mid-West and elsewhere in the USA. I have also noted with interest the support of Professor Leon Lederman, Professor D. Allan Bromley and other scientists as well as university administrators for the proposal.

.../...

Professor F.B. Malik
Physics Department
Southern Illinois University
Carbondale, IL 62901
U.S.A.

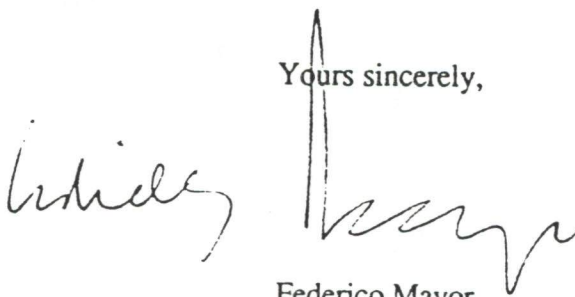

While I am anxious that Unesco should give its sponsorship and financial support to the Centre, I am not in a position at this stage, to unequivocally commit the Organisation to either. There are certain legal and practical questions which would have to be explored beforehand and, ultimately, sponsorship and financial support are matters for decision by the governing bodies of our Organisation - the General Conference and the Executive Board.

Subject to these considerations and to suitable arrangements being worked out, the Centre might be affiliated with or patterned on the ICTP. I envisage that Unesco sponsorship and financial support could be provided either directly or in association with ICTP. The amount of that financial support could not be determined until the mandate and budget of the Centre was known. The budgetary constraints facing Unesco would also be an important factor in this respect.

I look forward with interest to receiving a detailed proposal on the creation of the Centre in the USA, including proposals for start-up activities and financing.

With best wishes,

Yours sincerely,

A handwritten signature in dark ink, appearing to read 'Federico Mayor', written in a cursive style.

Federico Mayor

THE WHITE HOUSE

WASHINGTON

April 25, 1991

Dear Mary Ann:

It was a very real pleasure having an opportunity to meet and talk with you about possible initiatives for your foundation.

Since we talked I have thought of a possible initiative that I wanted to bring to your attention. I have long felt that the scientific and technological community has not given anything like the help and support that they should to that small endangered group of journalists who attempt to interface between science and technology and the general public. Given the rather desperate need that we have in this country to improve public literacy about matters of science and technology, I wonder if your foundation might not wish to consider the possibility of establishing a limited number of Annenberg Fellowships that would be open on a competitive basis to established members of the scientific journalism profession. I would anticipate that such fellowships, if they appeal to you, would be very prestigious and would give the winners the opportunity to select one of the major research universities as a base from which to spend a year refurbishing and expanding their connections with the science, engineering, and technology community activities.

Obviously, what I have in mind is analogous to the Nieman Fellowships at Harvard but with a specific science and technology emphasis.

If you and your colleagues have any interest in this suggestion, I would be happy to provide a short concept paper for your use.

If I can be of any help in arranging for you to meet with any of the people in the Department of Education, please let me know.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley".

Dear Jim:

Many thanks for your letter of February 21 in which you invite me to talk to the FCCSET Committee of Life Sciences at its meeting scheduled for April 11.

I would very much like to be able to accept this invitation but unfortunately, I am already scheduled to be at the Brookhaven National Laboratory on that day where there will be groundbreaking ceremonies for a major new accelerator facility in whose design I played a substantial role prior to coming to Washington.

Although I cannot accept your invitation to participate in this meeting of the Committee, I would welcome an opportunity to join you at a subsequent meeting and have an opportunity to tell you and your colleagues how very important I consider your activities.

Again, my thanks for the invitation and with all best wishes for a very successful meeting. Let me also express to you my personal thanks for the very effective leadership that you have provided for this group since its establishment.

Dear Allan:

As the Chairman of the Federal Coordinating Council on Science, Engineering and Technology (FCCSET) Committee on Life Sciences and Health (LSH), I would like to invite you to address the Committee at our April 11, 1991 meeting. It would be of great interest for the LSH members to receive an overview of the FCCSET and have a few minutes to speak with you about your visions for the LSH. From experience, I know that your participation will bring enthusiasm and motivation to the Committee.

If it is convenient for you, we will schedule you to be the first speaker. The LSH meeting will commence at 2:00 p.m. and will be held in room 729-G of the Hubert Humphrey Building, 200 Independence Ave. S.W., Washington, D.C. Please have your office contact Dr. Nancy Silva, 245-6301, to confirm.

Once again, I hope you can join us at the next LSH meeting.

THE WHITE HOUSE
WASHINGTON

February 21, 1991

Dear Eugen:

Many thanks for your letter of January 24 which was delayed substantially in reaching me in which you tell me about the activities of the Physics Planning Committee and in particular, the meeting that you have planned for April 25. You and the physics community have shown real leadership in organizing to support Congressional action on the President's budgets and that support is very much appreciated here in addition to being, in my opinion, very productive in the appropriations process.

I would also thank you for the statements of the APS Council relating to the Manned Space Station and the SSC. It would be inappropriate for me to comment in any formal sense on these statements, but I appreciate having them as the considered view of a very distinguished group.

I hope that you will agree that in the 16% increase for basic sciences that we have requested in the NSF, and the 9% increase for investigator funded projects that has been requested in NIH, we have at least begun to respond to the well-documented plight of the individual and small group investigators throughout the community. I would have to add, as I am sure you would agree, that there is no realistic possibility of our being able to respond to Leon Lederman's demand for a more or less immediate doubling of our investment in the support of science and technology, although I am happy to be able to report to you that there is a wide spread impression, both within the Administration and within the Congress, that we as a nation are still under investing seriously in that area. Our 1992 budget reflects the President's deep commitment both to education and research and development and I have every reason to anticipate that that support will remain strong throughout the Bush Administration.

It was good to hear from you and I shall look forward to seeing you at the APS banquet on Tuesday, April 23 if not before.

With all best wishes,

Sincerely yours,

RECEIVED

91 FEB 7 P 3: 03

January 31, 1991
OFFICE OF THE
DIRECTOR

Dr. Allan Bromley
Science Adviser to the President
Office of Science & Technology Policy
Executive Office of the President
Washington, DC 20500

Dear Dr. Bromley:

The International Association of University Presidents (IAUP), at its triennial meeting in Spain in July 1990, approved a working relationship with the Department for Disarmament Affairs of the United Nations. Enclosed is a Statement of Support from that Department.

The centerpiece of this relationship will be the formation of a commission of rectors, scholars, diplomats, arms control experts, and citizens, for the purpose of developing a cluster of interdisciplinary courses on arms control issues. This team will then select a few universities where these courses can be experimentally offered and evaluated.

We anticipate that the commission will consist of two layers: a steering committee of around 15, and a "corresponding" segment of around 30 persons. The former will meet monthly at the UN in New York, and will therefore need to live chiefly in that region. The corresponding members may reside anywhere, and will communicate primarily by telephone, FAX, and normal correspondence.

Except in hardship cases, participants will be expected to cover any travel expenses. However, U.S. meetings will be held annually in conjunction with ACE, and meetings abroad in conjunction with IAUP Executive Committee and triennial meetings. At IAUP meetings, all in-country expenses are covered by host governments or universities. Foundation funds are being sought, and a few donors have already expressed interest.

The IAUP Executive Committee, with the support of the UN Department of Disarmament Affairs, wishes to extend to you an invitation to be a member of the steering committee. We are especially seeking persons like yourself who have a concern about arms control, work well across cultural barriers, and/or are outstanding scholars or practitioners in one or more of the fields listed below. In addition to the foregoing qualities, we are anxious to involve persons who can speak and write in layman's language and who are sympathetic toward a multi-disciplinary approach.

Members of this commission might be asked at some future time to speak in support of arms control at seminars and conferences sponsored by the UN and related bodies. Your acceptance of this invitation, and/or nominations of other

suitable persons, would be most appreciated. If you are a university president, you are also invited to bring to the New York meetings an appropriate member of your own faculty, in which case would you please indicate that person's title, address, phone number, and field of expertise. Because we are trying to keep on a timetable, we would hope to hear from you by the end of February 1991.

If you have questions, please phone or FAX us at the University of Bridgeport or at Central Connecticut State University. A working paper now being completed will be sent to those appointed to the commission and will be the subject for the first New York meeting, which is planned for late Spring 1991.

Dear Prof. Miles,

I am pleased to confirm that the United Nations Department for Disarmament Affairs is co-operating with The International Association of University Presidents (IAUP) to develop a disarmament education programme in college and universities around the world. This initiative speaks to the very core of United Nations efforts towards international peace and disarmament.

We hope that you will be able to secure the required funding to bring this important project to a highly successful conclusion. If I may be of any assistance, please contact me.

With best regards,

Yours sincerely,

January 28, 1991

Dear Mr. Harbison:

Thank you for your letter of December 20 inviting me to visit your St. Louis office. I apologize for the much belated response.

As you can appreciate, the number of invitations I receive that entail travelling out of town is overwhelming, and I am finding that I cannot be away from Washington as much as I might like, so I must regretfully decline. However, my Chief of Staff, Ken Yale, is very interested in your work and has met with several Monsanto representatives if you wish to contact him.

I appreciate your thinking of me. With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

The Honorable D. Allan Bromley
Science & Technology Assistant
to the President & Director
Science and Technology Policy
Old Executive Office Building
Washington D. C. 20506

Dear Dr. Bromley:

I was delighted to have a chance to visit with you at the Canadian Embassy tree lighting, and to discuss some of the issues of the day. Of course, it's even more fun to talk with people with whom you agree.

As you are aware, we continue to mount an intensive effort in biotechnology research, particularly for application in pharmaceuticals and agriculture. I am confident our work is world class and I believe among a handful of leaders. The bulk of the effort is conducted at our research facilities just outside of St. Louis, which has to be one of the world's first class research centers. We've been fortunate to have visits from President Bush, Lou Sullivan, Connie Horner, and a host of Senators and Representatives, all of whom were gratified to see what an American company is doing at the forefront of the field.

Let me extend an invitation to you to visit our facilities in St. Louis and, hopefully, join our senior management for luncheon and a discussion. While we have a major emphasis on biotechnology, we are heavily committed to science throughout our multiplicity of product lines and I think a visit by you would certainly be of benefit to us and, hopefully, to you. I will ask David Brown to follow up with your staff to see if we can arrange a time on your calendar for an early visit with us.

Best wishes for the Christmas holidays and the coming year.

Dear Mr. Aten:

Thank you for your kind letter of December 14 inviting me to address the MAPI Conference scheduled to be held April 18-20 in Ponte Vedra Beach, Florida. I apologize for the much belated response.

As much as I would like to join you, I am sorry that I have to decline your invitation but I have a long-standing commitment at that time. I regret that I will have to miss what appears to be an outstanding program.

Thank you for thinking of me and I offer my best wishes for a successful conference.

Sincerely yours,

The Honorable D. Allan Bromley
Assistant to the President for
Science and Technology
Old Executive Office Building
17th & Pennsylvania Avenue, N.W.
Washington, D.C. 20506

Dear Dr. Bromley:

You will recollect that when the President requested that you accompany him to Latin America, you had to cancel your plans to make an informal presentation to the MAPI Conference on Business and Economic Policies on December 6. I am sure you will be glad to know that the session went just fine. Your staff may also have reported to you that we are still interested in hearing you speak. Thus, this letter extends to you a most cordial invitation to make an informal presentation to the MAPI Conference at the session in Ponte Vedra Beach, Florida, on April 18-20, 1991.

As you may recall from our previous letter, the Conference is one of MAPI's most successful efforts--this is the forty-third annual conference, with an alumni of over 2,500. The enclosed brochure explains the background, purpose, and basic agenda of the Conference. The list of member company participants enrolled in the 42nd Conference will give you an idea of the caliber of persons participating. Other federal government speakers this year include: Richard C. Breeden, Chairman, Securities and Exchange Commission; Frank Conahan, Assistant Comptroller General for National Security and International Affairs; Representative Sam M. Gibbons, Chairman, House Subcommittee on Trade, House Ways and Means Committee; Sidney Jones, Assistant Secretary for Economic Policy, U.S. Department of the Treasury; Robert Reischauer, Director, Congressional Budget office; and John C. Weicher, Assistant Secretary for Policy Development and Research, U.S. Department of Housing and Urban Development.

As before, we are inviting you to discuss some aspect of the federal role in science policy or research development, possibly as it relates to manufacturing. Our idea is that you would tailor your presentation to the interests of Conference participants. We have in mind a presentation of about 35 minutes followed by ample time for questioning.

Finance Committee

Chairman

Thomas F. Russell, Chairman
Federal-Mogul Corporation

Vice Chairman

Robert Cizik, Chairman and President
Cooper Industries, Inc.

Edmund M. Carpenter, Chairman
General Signal Corporation
Edson I. Gaylord, Chairman of the Board
The Ingersoll Milling Machine Company
John T. Hartley, Chairman and President
Harris Corporation
Robert E. Howson, Chairman
McDermott International, Inc.
Paul E. Lego, President
Westinghouse Electric Corporation

John C. Morley, President
Reliance Electric Company
J. Tracy O'Rourke, Chairman
Varian Associates, Inc.
Paul G. Schloemer, President
Parker Hannifin Corporation
Orin R. Smith, President
Engelhard Corporation
Harry C. Stonecipher, President
Sundstrand Corporation

Perhaps a word about MAPI and its programs would be useful. Organized in 1933, MAPI is a nonprofit policy research organization which represents a broad section of U.S. manufacturing. Our economic and policy research is supported by nearly 500 companies from heavy industry, automotive, chemicals, oil and gas, electronics, precision instruments, telecommunications, computers, office systems, aerospace, and similar high technology industries. Most larger and many small manufacturing firms are members. I am enclosing a brochure that spells out the scope, purposes, and membership of MAPI in some detail.

I know of no other executive development program that provides emerging executives with an opportunity to hear the views and engage in professional discussion with so many business and government leaders. I hope your schedule will permit you to help MAPI provide this unique opportunity to its member companies.

We look forward to hearing from you.

Cordially,

Robert H. Aten
Vice President and Chief Economist

Dear Paul:

Many thanks for forwarding the photographs taken by Dr. Matera's photographer during our meeting in Buenos Aires.

Our entire trip was a very interesting and, I think, a very productive one and I want to take this occasion in particular to thank you for all your help in making arrangements and making possible the very effective meetings with our Argentine colleagues.

Sara is in excellent health and preparing for her first offspring. She too asks me to pass on to you her appreciation and thanks for all your help while we were in Buenos Aires and we look forward to working with you as we build closer scientific and technological cooperation between the United States and Argentina. As we discussed during my visit, there would appear to be a great many opportunities for mutually beneficial interactions.

With warmest best wishes for a happy and rewarding New Year,

Sincerely yours,

D. Allan Bromley

Dear Mr. Myers:

I appreciate your kind invitation to be the keynote speaker at your Annual Dinner scheduled to be held this spring in Wallingford. I apologize for the belated response.

Because we are very adamant about the education of our future scientists, I would have liked to contribute to CAPT's efforts to this end. However, the number of requests I receive is overwhelming and growing, and I find that this spring is extremely busy so I must regretfully decline your invitation.

Thank you for thinking of me and let me offer my best wishes for a most successful Annual Dinner.

Sincerely yours,

December 3, 1990

Dr. D. Allan Bromley
6716 Tulip Hill Terrace
Bethesda, MD 20816

Dear Dr. Bromley:

Please allow me to re-introduce myself: we met and spoke briefly at the reception for the Presidential Awards for Excellence in Science Teaching in October at the State Department. I am Connecticut's 1990 high school science recipient of the Award.

As President of the Connecticut Association of Physics Teachers (CAPT), I would like to invite you to give the keynote address at our Annual Dinner/Speaker Meeting to be held this spring. Typically about 60 high school physics teachers gather to chat over dinner and to listen and interact with a featured speaker. The meeting will most likely be held at Choate Rosemary Hall in Wallingford, CT.

CAPT is flexible regarding the date of the meeting. We are currently looking toward April or May for the function. Perhaps you can combine our meeting with a trip to Yale or the area. Unfortunately, CAPT's budget does not allow for a large honorarium. The topic of your presentation is completely up to you. We are certainly interested in the condition of science education in the nation as well as your views and experiences dealing with nuclear physics.

It is my sincerest hope that you will accept our invitation. Should you wish to respond to this invitation by telephone, I am usually easier to reach evenings at home.

Thank you very much for considering this invitation.

Sincerely,

*Tell them that I
am overcommitted
for the coming spring
and summer and
Thank them for
the invitation*

Dear Professor Rubenstein:

Many thanks for your letter of December 18 in which you inquire about my interest in being considered as a candidate for the presidency of your university.

Let me say, first of all, that I am greatly honored by Dr. Maher's nomination and by your interest in contacting me. At the moment, however, I am committed to remaining in my present position through the completion of the first Bush Administration in 1992 and, for that reason, attractive as the presidency of your university is to any academic, I am afraid that in all honor I would have to tell you that I cannot be a candidate at this time.

Many thanks for your letter. Let me wish you every success in your search for a candidate who will provide the leadership that your great university deserves and has every right to expect.

With warmest best wishes for a happy, healthy, and rewarding New Year,

Sincerely yours,

D. Allan Bromley

Dear Dr. Bromley:

Your name has been proposed by Dr. James Maher as a prospective candidate for the position of President of the University of Pittsburgh. A description of the position is contained in the attached copy of an advertisement that has appeared in a number of journals.

If you are interested in being considered for this position, we shall be most grateful if you would send us a curriculum vitae to be reviewed by our search committee.

We shall welcome your candidacy.

Sincerely,

University of Pittsburgh

PRESIDENT

Recommendations and letters of interest are invited for the position of President of the University of Pittsburgh. The President is the chief executive officer of the University and reports to the Board of Trustees.

The University of Pittsburgh is one of the nation's leading centers of teaching and research, with annual operating revenues of \$675 million. Pitt serves 34,600 students on one main and four regional campuses. The 2,700 full-time faculty support degree offerings in more than 200 fields of study.

Founded in 1787, the University of Pittsburgh is one of the oldest institutions of higher learning in the United States. Pitt is a long-time member of the Association of American Universities.

Internationally acclaimed for its scientific achievements such as the Salk polio vaccine, discoveries of vitamin C, and synthetic insulin and the synthesis of ACTH, an emphasis on liberal arts and science remains at the heart of the University.

Pitt's largest school is the College of Arts and Sciences, in which 9,400 of the 18,900 undergraduate students on the Pittsburgh campus are enrolled as majors. A new Honors College provides opportunities for undergraduates to pursue educational endeavors ordinarily accessible only to graduate students.

The remaining students are enrolled in a broad range of professional schools—Business, Education, Engineering, Law, Library, and Information Science, Public and International Affairs, Social Work and six schools of the health sciences: Dental Medicine, Health Related Professions, Medicine, Nursing, Pharmacy, and Public Health. Many of Pitt's schools, departments and programs enjoy top national rankings.

The University has won worldwide renown for its Medical Center. Ranked among the top 25 medical centers for specialized treatment, the medical center includes six major hospitals operated by or affiliated with the University.

The University's faculty of 2,700, with 43% of its members tenured, holds the primary authority and responsibility for the successful conduct of the University's missions in teaching, research and service to the larger community.

The success of Pitt's Campaign of the Third Century is representative of the support that the University receives from alumni and friends. Begun in June 1987, this five-year, \$225 million capital campaign is expected to significantly surpass its goal by February 1991, more than a year early.

The retiring President has led the University in educational excellence, in cutting-edge technology, in social advancement, and in service to the community, to society, and to the international community.

The new President will have the opportunity to add and build upon these strengths. Leading candidates will have distinguished records of accomplishments in the field of higher education or other professional fields and will possess demonstrated abilities to meet the challenges of the 90's.

The new President should be well versed in, and strongly committed to, the values of liberal arts and professional education at both the undergraduate and graduate levels, as well as scholarly research and public service.

Recommendations and letters of interest should be submitted to:

Mr. Farrell Rubenstein
Chairman, Presidential Search Committee
University of Pittsburgh
Office of the Presidential Search Committee
Pittsburgh, PA 15260

or

Mr. Malcolm MacGregor
President
Boydell International
625 Stanwix Street, Suite 2405
Pittsburgh, PA 15222

All inquiries, nominations and expressions of interest received will be held in strictest confidence throughout the presidential search process and thereafter.

The University of Pittsburgh is an equal opportunity, affirmative action employer, and actively seeks and encourages nominations of and expressions of interest from minority and female candidates.

THE WHITE HOUSE
WASHINGTON

January 2, 1991

Dear John:

As you requested I have sent off a written letter of recommendation to Barry Zaret and hope that all works out as you would want it to.

It was good to see you on the 12th of December.

Let me wish you a happy, healthy, and rewarding New Year.

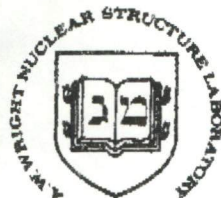

With all best wishes,

Sincerely yours,

Washington, D.C. 20506

Dear Allan:

I was very pleased to talk with you. I am sure the demands on your time are enormous. As I mentioned, we have continued to make progress. We ran a 3 liter detector with 10 and 3cm drift distances for many months during last year. A serious limitation of this detector was the high voltage feedthroughs which would only allow us to get to 10KV. This impaired the energy resolution of the 10cm detector. The resolution in the 3cm detector was less than 2% at 1 MeV. Similar to our experience with our smaller detectors we saw no drift or degradation with time over months in resolution or collected charge. Comparing collected charge at the same electric fields over the two drift distances we have measured a 6.5% charge difference. This can be attributed to 10 pp trillion of SF_6 . We repurified our Xe several times using our existing Fe, V getter but saw no change at the 0.1% level. What is more, there was SF_6 (1pp million!) in our xenon, as bought from Liquid Air. We have built a 5 liter high purity Ti sponge getter which operates at 950°C. This should be very effective at removing the SF_6 .

We have designed a high voltage, high pressure, high purity (ugh) custom feedthrough for a new detector which is being completed (4.5 liters).

Our separated xenon, 1000 liters of greater than 50% enrichment from Ultra Centrifuge Netherlands should arrive next month.

Assuming that we can solve the impurity problems this new detector should allow us to begin to look for double beta decay. We have surveyed the background of all of the construction materials. We will use plastic scintillator cosmic ray vetos, similar to those that we used at Caltech. I believe that by using our waveform digitizer we can reject much of the background by discrimination of each events projection in the field direction. Our goal is to get to the Ge experiment neutrino mass limit with this detector. This sounds extravagant, however, it is about 50 times worse than our proposal in lifetime! Most of this factor of 50 would come with lower background and a longer running time.

My personal situation is somewhat uncertain. I will probably need to stay in this area for the next few years. My daughter and ex-wife will be here. To this end I am applying for a position at Smith College. If you could please send a letter to:

Professor Bruce Hawkins, Chair
Clark Science Center
Smith College
Northampton, MA 01063

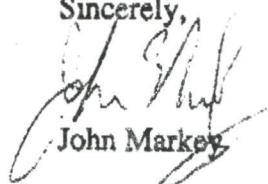

Of course my interest in teaching and students is as important as my research for this.

I am also applying for a position in the field of nuclear medical imaging. There is being built a PET center at the V.A. Hospital in West Haven. The position is Chief Physicist in charge of the PET detectors and operation of the cyclotron. You may remember that I worked at Hughes and JPL on radar image processing which is very similar to PET. In addition, there may be some interest in xenon detectors for PET. There is a strong interest at the Medical School in using this PET lab to do neuroscience. This seems very exciting to me. Please send your letter to:

Dr. Robert Soufer
Chief of Nuclear Medicine
V.A. Hospital/Nuc. Med-115
960 Campbell Avenue
West Haven, CT 06516

Thank you for your kind help.

Sincerely,

John Markes
