THE WHITE HOUSE
WASHINGTON

March 26, 1991

Dear Dan:

Congratulations on your new position! It sounds very exciting and I am sure that you will be extremely successful with the new responsibilities. Please do keep in touch.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley
Assistant to the President
for
Science and Technology

Dr. Daniel J. Pisano
President

March 11, 1991

OFFICE
DIRECTOR

The Honorable D. Allan Bromley
Assistant to the President
The White House
17th Street and PA Avenue, NW
Room 358
Washington, DC 20506

Dear Allan,

I thought I would drop you a note to let you know I have left Perkin-Elmer to join Kollmorgen Corporation as president of their Macbeth Division. Macbeth is a leader in the field of international instrumentation to measure color and its products are sold to a wide range of industries. This position will give me an opportunity of transforming "an average American company" into a world-class company. I am excited about the challenge.

I hope things are going well with you and your family. With best wishes

Sincerely yours,

Daniel J. Pisano, Ph.D.
President

8 MAR 1991

Honorable D. Allan Bromley
Assistant to the President for
Science and Technology
Old Executive Office Building, Room 358
17th and Pennsylvania, NW
Washington, DC 20506

OFFICE OF THE
DIRECTOR

Dear Dr. Bromley:

Per your request, I have reviewed the American Physical Society (APS) proposal for a study on verification technologies for safeguarding special nuclear materials. I recommend that you discourage this proposal as redundant.

You may not have been advised of another report, presently being accomplished for Congress, that should satisfy the APS requirements and interests. In Public Law 101-510, November 5, 1990, Section 3151, requires the President to prepare a "comprehensive technical report" describing on-site monitoring techniques, inspection arrangements, and national technical means that could be used to verify:

- a. dismantlement of nuclear warheads,
- b. a ban on the production of additional plutonium and highly enriched uranium for weapon purposes, and
- c. disposition of the plutonium and highly enriched uranium recovered through dismantling of warheads.

Further, the law directs the President to establish a Technical Advisory Committee, comprised of preeminent government and nongovernment experts, to advise the President on the availability, use and further development of applicable verification techniques.

Since the report seems to cover all of the areas APS is interested in, and because the report is to be unclassified (with classified appendices as necessary), it would seem to fulfill APS needs. The report is due to Congress not later than April 30, 1991, and compilation of the report is already well underway. May I suggest you recommend that APS await the report before any further action on their proposal.

Sincerely,

Robert B. Barker

THE WHITE HOUSE
WASHINGTON

January 2, 1991

Dear Ken:

Many thanks for your note of December 19. After some 44 wonderful years with Pat there is no question but what I miss her terribly, particularly at this time of year. At the same time it is certainly true that the support of old friends like yourself is enormously helpful at sad times like this.

I was intrigued by the paragraph in your letter concerning the studies that you and Peter Rose have underway and when next either or both of you find yourselves in the Washington area, I would indeed be interested in knowing more about what you have up your respective sleeves.

With every best wish for a happy, healthy, and rewarding New Year,

Sincerely yours,

D. Allan Bromley
Assistant to the President

December 19, 1990

Dr. D. Allan Bromley,
Assistant to the President for Science and Technology
The White House, Pennsylvania Ave.,
Washington, D.C.

Dear Al,

I was recently talking to Harry Gove and I was very sorry to hear that Pat had died. There are few comments that one can make under these circumstances except that I would say that, during the conversations she and I had over the years, the dominant reaction I always came away with was that she and you made up a very complementary team; I am sure you will miss her very much and I sympathize with you on your loss.

Peter Rose and I have become very excited about the possibilities of the use of ion beam mask projectors in the Semiconductor Industry as a replacement for optical lithography (when optical systems reach wavelength limitations -- if they ever do!). In the last few weeks we have reviewed work done during the last ten years in Austria on ion projection schemes and have become convinced that such systems are probably practical, would avoid many of the problems of X-ray lithography and would allow normal circuits and quantum effect devices to be built at the 0.1 micron level and below. If you are interested, when we are in Washington next, we could drop by to fill you in on some of these potentially exciting developments.

My wife and I send you our warmest seasons greetings.

Best regards,

Ken Purser.

MEMORANDUM TO DORRANCE J. SMITH

FROM: D. ALLAN BROMLEY *Alan*
SUBJECT: A WORLD MEDIA PROPOSAL

Early this year I was approached by a Laurent Munnich who is Deputy Director of something called World Media Liberation. What he had in mind was a rather global project in which he proposed to select some half-dozen of the world's leading scientists who would pose questions which would then be addressed to the half-dozen or so of the most senior world leaders with the results and response to then be published in a special issue that World Media would issue on science in some 27 of its member publications around the world. They claim that the **Christian Science Monitor** is their American outlet and that all together their various publications reach some 20 million readers.

I was less than enthusiastic about this whole activity because I had the distinct feeling that it very well might represent a setup, as far as President Bush was concerned, and so in consequence I was not at all encouraging.

When I was in Paris in early August Mr. Munnich some how managed to get himself inserted into the schedule that had been arranged for me by our Embassy. I believe he acted through a personal friend on the Embassy staff. In any event, he again made his pitch and at that time was overjoyed that he had been able to obtain agreement for the participation of President Gorbachev as well as the President of some tiny African Republic of which I had never heard previously. I again told him that I did not believe that the project was one that I could recommend to President Bush particularly after learning that the scientific panel, in my view, was definitely tilted toward the left of the political spectrum and with a very heavy environmental overlay.

I have recently heard from Munnich again, confirming that President Gorbachev is to participate, presumably before December 31, and he also tells me that he has been able to secure the participation of Prime Minister Miyazawa of Japan.

I am providing you with this information so that when Munnich tries again, as I suspect he will, to get President Bush involved you will have some of the background. My own conclusion is that there is very little upside to this operation for the President and a rather large downside.

Should you decide otherwise, Mr. Munnich can be reached at 11 rue Beranger, 75154 Paris CEDEX 03, France

Transmission by fax

To: Dr Bromley, The White House, Executive Office of the President

From: Laurent Munnich, deputy director

Date: Mer 20 Nov 1991

Time: 18:59, (Paris time)

Mailing address 11 rue Béranger, 75154 Paris CEDEX 03

Tel Number: 33-1-42 76 16 50 Fax Number: 33-1-42 72 95 01

Dear Dr. Bromley,

I have not heard from you since we met last in Paris, but as you probably know I have been in touch with people of your staff since then.

I take the liberty to get back to you today with the following pieces of information which might be of interest for you:

A)-As scheduled our World Media special issue on science is coming out in December/January in 27 publications (i.e. 20 millions readers)

B)-All the scientists asked to participate have agreed and already sent their contributions.

C)-More unexpected, for obvious reasons, we have received confirmation of President Gorbachev's participation. His spokesman, Andrei Gratchev, has been very helpful for us in the past, and helped us again this time.

D)-At the last minute we found ourselves confronted to the renewal of Prime Minister in Japan-but finally secured the participation of M. Miyazawa.

I thought that all those information could be of interest for you. As you will certainly agree, it would be a real pity not to have any American contribution in such an issue.

As you can imagine, we are now running very short of time since partners are in the process of closing their issue.

I am looking forward to hearing from you.

Yours sincerely,

Laurent Munnich

THE WHITE HOUSE
WASHINGTON

January 18, 1991

Dear Mr. Smith:

Allow me to congratulate you on your support of the series of volumes in the **The Larger Agenda** series published by Whittle Communications.

An enormous amount of material crosses my desk each day but I can tell you that I have read each of the volumes in the series that I have received thus far with both pleasure and profit. I look forward to the same input from Michael Lewis' **Pacific Rift** which has just now arrived.

With all best wishes for a happy, healthy and prosperous New Year,

Sincerely yours,

Dear Friends and Customers:

Please accept with our compliments and thanks the enclosed book, *Pacific Rift* by Michael Lewis -- latest volume of The Larger Agenda Series, edited and published by Whittle Communications. I hope that you will find the book both insightful and beneficial at the opening of another year in the countdown to the 21st century.

In 1990 Federal Express was honored with the Malcolm Baldrige National Quality Award, and I would like to take this opportunity to reaffirm to you, our customers, our continued and total commitment to the quality of the services we provide as we approach the next century in an ever-shrinking global market. We trust that you will find The Larger Agenda Series representative of this commitment.

Enjoy the book, and please communicate all inquiries and changes of address to Whittle Direct Books at 1-800-284-1956. The thoughts and opinions expressed in each volume are those of the author, not the publisher or Federal Express.

Best wishes for a happy and prosperous 1991.

Sincerely,

Dear Dr. Selden:

Thank you for your letter November 9 inviting me to address the 32nd Awards Banquet scheduled to be held in Dayton, Ohio on February 21, 1991. I appreciate your kind words and apologize for the much belated response.

As much as I would like to join you, the number of requests that I receive asking me to make presentations is overwhelming and although I would very much like to accept a great many of these invitations, it is simply impossible for me to do so. The date in question is not a good time for me to be away from Washington so I must regretfully decline.

Thank for you thinking of me and may I offer my best wishes for what I am sure will be a very successful event.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with a large loop at the end.

December 17, 1990

Dear Dr. Bromley:

On behalf of the Armenian Engineers and Scientists of America, Inc. (AESA), it is our pleasure to invite you to participate in Symposium-91 by delivering the keynote address.

A new era of cooperation and communication between the United States and the USSR has created an unprecedented potential for global change and the need for careful planning for a better future. However, the Soviet Union, and its constituent republics, presently faces severe economic and political crises. The Armenian community of the United States is deeply troubled by the recent dismal reports on the social, economic, and political situation in the Republic of Armenia. The AESA, headquartered in Los Angeles, California, has the vision to extend a helping hand to their compatriots; to this end, the AESA will convene a symposium during February 21-23, 1991 to develop a comprehensive plan for the economic restructuring of Armenia. Many noted experts from the USA and Canada, various European countries, and the Soviet Union will participate. Similarly, a high-ranking government delegation from Armenia will actively provide inputs for the success of this important endeavor.

It is our belief that all public and private efforts of this type may prove quite critical for the reconstruction of the virtually collapsed Soviet economy. Your office can play an important role in providing guidance and assistance for the economic revitalization of Armenia, the ancient homeland of our forefathers.

Your cooperation in this urgent undertaking will be greatly appreciated.

Sincerely,

AESA Symposium-91 Program Committee

Dear Mr. Bromley,

It is with great pleasure that we invite you to a meeting on: 'The Essential Role of Science in Technological Progress and Economic Development', which will take place during the period 29, 30 and 31 August 1991.

This is probably the first meeting of its kind ever to be organized, in which key representatives from the scientific and economic realms, as well as from governments and international organizations, are invited to come together for a frank debate on economic development and science. Attached you will find a draft on the proposed objectives and format of the conference and we would be pleased to receive any comments and suggestions you may have, by the end of January 1991 at the latest, in order to allow for possible modifications.

The Third World Academy of Sciences (TWAS) and the International Centre for Theoretical Physics (ICTP) will be happy to cover your living expenses here in Trieste, and we look forward to hearing from you soon.

With best regards.

Room 360
Old Executive Office Building
Washington, DC 20506

Dear Dr. Bromley:

On behalf of the more than 100,000 members of the American Society of Civil Engineers (ASCE), I want to enthusiastically endorse Dr. William M. Sangster for nomination by President Bush to the National Science Board.

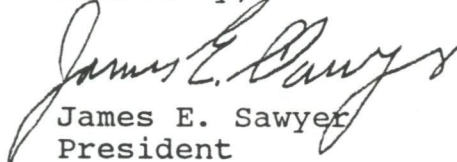

Dr. Sangster's brilliant career in academia speaks for itself. A renowned expert in hydraulics, fluid, and solid mechanics, William Sangster has served as Dean of the College of Engineering at Georgia Institute of Technology since 1974. Prior to his appointment as Dean, he served as Director and professor of civil engineering at Georgia Tech for seven years. Dr. Sangster was affiliated with the College of Engineering at the University of Missouri from 1948 to 1976. He has written or co-authored more than 20 publications.

An active member in many professional organizations, William Sangster served as President of the American Society of Civil Engineers from 1974 to 1975. In 1989, Dr. Sangster was elected Vice Chairman of the Engineering Manpower Commission of the American Association of Engineering Societies.

In recent years, as a result of his strong interest in international engineering and education activities, Dr. Sangster has led numerous travel missions overseas.

Mindful of the serious challenges facing the U.S. in the areas of education, research, and international competitiveness, I can think of no stronger candidate for nomination to the National Science Board than Dr. William Sangster. He has ASCE's highest recommendation.

Sincerely,

James E. Sawyer
President

Dear Dr. Bromley:

The 1991 Government Microcircuit Applications Conference (GOMAC-91) program committee will be most pleased to have you accept our invitation to present a keynote address in the Plenary Session on 5 November 1991, at the Hyatt Orlando Hotel, Orlando, Florida.

GOMAC, now in its 23rd year, is the premier government-sponsored conference established to efficiently communicate and exchange current and emerging developments in microelectronics applications for government systems. It attracts significant participation of scientists, engineers and administrators from the government, industrial, and academic communities. We present the latest microcircuit developments/applications that give our nation and military forces the competitive/winning edge.

Last year the conference theme of "Technology Strategies for the 90's" was keynoted by Dr. Charles E. Sporck, President and Chief Executive Officer of National Semiconductor Corporation and Chairman of the Board of SEMATECH. The conference spotlighted the ability for the US to continue our technological edge in a rapidly changing environment and with declining defense budgets. Perspectives on the role of government in technology strategy, and technology and process support for defense electronics funded through venture capital were provided in the Plenary Session. There was also a tribute to Robert Noyce for his contributions to the industry.

85 : 21 8 JAN 8 1991

RECEIVED

This year, GOMAC will focus on the impact of monolithic microwave and opto-electronic technologies on government systems. Monolithic circuitry and wafer-scale integration are recognized as a potential choice in meeting future needs for affordable, reliable and reproducible digital, microwave and millimeter-wave components and systems. In addition opto-electronic devices are pervasive in all levels of Government from the fiber-optic transmission lines being considered for the FDS-2000 telephone system to optical interconnects for electronic devices and optical processors. The conference will spotlight technology areas of monolithic microwave and opto-electronics.

The Plenary Session is of particular importance. In today's environment of global competition, your views on advanced technology policy to carry the nation into the 21st Century with declining defense budgets would be of great benefit to our corporate audience.

We realize that commitment to this address will require preparation (45 minutes is reserved for the presentation and subsequent questions from the audience) and time and resources to travel. Consequently we would be happy to assist in any way that you or your staff suggest.

As Technical Program Chairman, I am available to facilitate your efforts. I look forward to your agreeing to address our Plenary Session. Please address any correspondence to me at the following address:

Naval Air Development Center, Code 40F
ATTN: Walter J. Schoppe
Warminster, PA 18974-5000

My telephone number is (215) 441-2378.

Sincerely,

WALTER J. SCHOPPE
Technical Program Chairman
GOMAC-91

THE WHITE HOUSE

WASHINGTON

Dear Virginia and David:

I was so sorry to hear that Virginia was again on chemotherapy and I know how difficult this is for both of you.

I shall look forward to having you as neighbors in Pittsburgh, and as soon as you get a chance, I would welcome the opportunity to take you to lunch at the Executive Mess in the White House.

I am sure that we will be able to come up with all sorts of interesting things for both of you to do in whatever time you can make available to the Federal Government.

In the meantime, let me only say that my prayers are very much with you and I shall be thinking of you through the holiday season.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

December 11, 1991
PERSONAL

Dear Allan:

As you can see, Virginia's remission was short-lived, and we have now begun the second, heavier round of chemotherapy. We can still hope that something better will come along as she needs it. If you hear of anything new, please let me know.

Penn State is close to Washington, where I expect to visit with regularity. I herewith offer my services for whatever role you deem them appropriate, in support of the federal science/education enterprise. My advice won't cost you a cent, and will be worth the price!

Put me down, please, as an early supporter of George Bush for re-election. Although I have never met him in person, it is easy to admire his unusual gifts of character, compassion, and brains. Until and unless the world's troubled regions find stability, we need the best possible leader.

Our personal very best wishes in this holiday season.

Yours truly,

David A. Shirley

Dear Ms. Sunley:

Thank you for your recent letter and your comments on my CHEMRAWN speech in Baltimore.

I do appreciate your thinking of me and sending me Global Biomass Burning: Atmospheric, Climatic, and Biospheric Implications. As you know, the scientific uncertainties associated with global change make this an especially difficult issue for policy-makers. Therefore, a publication such as this which provides indepth information on one of the main factors in the global change question is most welcome. I intend to read it carefully and then share it with interested staff here.

My best wishes,

Sincerely,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

The Honorable D. Allan Bromley
Assistant to the President
for Science and Technology
Old Executive Office Building
17th Street & Pennsylvania Avenue, NW
Washington, D.C. 20506

Dear Dr. Bromley:

One of our authors, Dr. Joel S. Levine of NASA, heard you speak on "An Approach to Global Climactic Change: A United States Perspective" at the CHEMRAWN VII World Conference The Chemistry of the Atmosphere: Its Impact on Global Change in Baltimore, Maryland on December 3, 1991. He tells us you gave a very enlightening and stimulating talk, and that you mentioned biomass burning and deforestation as a possible cause of global change.

The state of the information known about global biomass burning and its environmental impact is assessed in a new book entitled Global Biomass Burning: Atmospheric, Climatic, and Biospheric Implications, edited by Dr. Levine, published this month by the MIT Press. The book is based on an international conference organized by Dr. Levine and the American Geophysical Union (AGU). More than 200 scientists, government officials, and environmental policy planners from over 20 countries attended the conference in Williamsburg, Virginia in March, 1990.

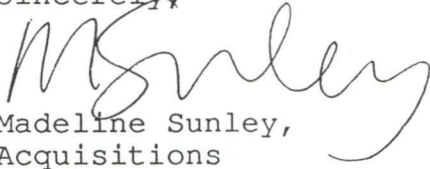

Four important conclusions of the conference detailed in the book are that: 1) biomass burning (the burning of forests, grasslands, and agricultural stubble after the harvest) is much more widespread than previously believed (outliend in volume introduction); 2) biomass burning is a very significant source of atmospheric gases and may be responsible for as much as 40% of the global annual production of carbon dioxide, 32% of the world's production of carbon monoxide, and as much as 38% of the photochemical production of ozone in the troposphere (see

page 13, Table 1.6); 3) the bulk of biomass burning is human-initiated and is increasing with time (pages 321-325); and 4) the majority of the human-initiated biomass burning may be significantly decreased over the next decade (pages 445-456).

Global Biomass Burning is the first and only definitive and comprehensive statement on biomass burning as a driver of global change. The advance comments and reviews indicate that it will become a very important and influential book. Its publication just six months before the United Nations Conference on Environment and Development (UNCED) in Rio de Janeiro, Brazil is most timely.

In the hope that you and your staff will find this information useful, please accept the enclosed copy of Global Biomass Burning with the good wishes of the MIT Press and the volume editor, Joel S. Levine.

Sincerely,

Madeline Sunley,
Acquisitions

Dear Dr. Bromley:

On behalf of the Chancellor and Board of Trustees of the State University of New York and the faculty of the University at Albany, I am privileged to offer you the Honorary Degree of Doctor of Science to be awarded at the University at Albany's Commencement ceremony on May 17, 1992.

The awarding of this degree recognizes your achievements as a physicist, your leadership of your discipline, and your commitment to an informed public policy response to issues of science and technology.

We would appreciate having notice of your acceptance by mid-December so that the State University of New York Board of Trustees may pass the formal resolution that accompanies the degree. Following that action by the Board, a public announcement will be made.

Please accept my warmest personal congratulations on being selected to receive an Honorary Degree from the State University of New York. The University at Albany would be deeply honored if you are able to accept.

Sincerely,

H. Patrick Swygert

Dear Herb:

I have been traveling extensively since I saw you and therefore the delay in getting back to you to express to you my appreciation of your warm hospitality while I was visiting recently in North Carolina. It was a particular pleasure to meet with you and your colleagues to participate in the GIS Symposium and to speak to your annual meeting.

I too look forward to working with you and your colleagues to prepare for the second symposium in Los Angeles next spring.

I believe that Steve Olson has already sent you a copy of my remarks at your Annual Dinner and you should feel completely free to distribute them as you see fit.

Again, my thanks for your invitation and for all your hospitality.

Sincerely yours,

D. Allan Bromley

Washington, DC 20506

Dear Dr. Bromley:

We truly enjoyed having you with us in the Triangle last Tuesday.

The GIS Symposium in the afternoon was, from our point of view, an unusually good opportunity to dialogue between the Federal Government and the GIS community in general. We will be producing a summary of the major points to give you and the other participants.

The meeting of the NACo Focus Group was very useful to help us better understand the next steps required to move this project into its action phase.

Your remarks at our Annual Dinner were well received and of great interest to members of our scientific community as well as political leaders in the audience. We have received several requests for your remarks, so I hope you can send me a copy for distribution.

Again our sincere thanks to you for your commitment to spend time with people in local government and for moving along this vitally important matter of allowing as much technology as possible to become available for local government use.

Sincerely yours,

Herb Stout, Chairman
Triangle J Council of Governments

December 3, 1991

Dear Ed:

It was great to have you here for the Medal of Science ceremony and yours was certainly very much merited.

I appreciate your invitation to the President to make a detour to Mauna Kea during his brief stay in Hawaii for the 50th anniversary of Pearl Harbor Day and I have mentioned it to him. Unfortunately, as you know, the original schedule has been substantially changed because of the postponement of the Western Pacific component of the trip and, at this point, the intention is for the President to have only a relatively brief stay in Hawaii on December 7 so that the suggested trip, although I know he would find it fascinating, will simply not be possible at this time.

As you also know, the trip has been rescheduled beginning December 30 and ending in Tokyo on January 10. But again, because of the great difficulties in scheduling a Presidential visit on what is relatively short notice, it will make it impossible for him to take you up on your invitation on that trip as well.

This is, however, an excellent idea that I will very much keep in mind and on the next pass when the President gets to Hawaii, as I am sure will occur sometime during the next year, we will try and fit it in.

The Annual Report that you included with your letter is a most impressive one.

With all best wishes, and again, congratulations.

THE WHITE HOUSE
WASHINGTON

December 2, 1991

Dear Yoshio:

Many thanks for continuing to keep us up to date on what is happening vis-a-vis activities in Japan.

I have learned to develop a very thick skin with respect to anything said about me in the *New York Times* or, indeed, in the media anywhere. I am more and more convinced that most of these people write their stories well before they ever contact any of us in Washington and then simply listen to see whether we say anything that can be taken out of context that will support the main thrust of their already established story. A few words of support are always, however, most welcome.

You should certainly not conclude from the fact that you did not receive a return phone call from Gene Wong that your activities on our behalf are not appreciated. Gene was out of the country and has been running ragged with his new responsibilities as Associate Director for Industrial Technology, a position that he took over when Bill Phillips' health deteriorated to the point where he felt that he had to resign. I can assure you that we very much welcome your input and assistance and this is certainly true with respect to the NIPT. What we have done here is to go back to the Japanese with a very specific proposal that, instead of some kind of vague collaboration over the entire field of information technology, we focus specifically on opto electronics and mount a closely focused joint program in that area as something of a pilot activity under NIPT. This is now in the Japanese court but when I was in Japan a few weeks ago I found that the suggestion had been well received and, from all I could gather, the Japanese are prepared to take us up on our proposal.

We are, however, very much in need of the kind of input that we simply do not have that appears in Japanese publications, so I would really urge you to continue to contact us, and me in particular, whenever you run across something that you feel we might have missed.

I deeply appreciate your willingness to help and can assure you that your efforts are anything but unappreciated.

With warmest best wishes,

Sincerely yours,

Dear Allan:

I am taking the liberty of sending you a few clippings from two Japanese dailies, Asahi and Nihon Keizai Shinbun (Nikkei), re your recent trip to Tokyo and SSC. I am tempted to make a few critical comments on remarks attributed to you by David Sanger of the New York Times. However, knowing that you already have enough problems in your own backyard, it would appear prudent not to further burden you with my remarks.

After dispatching to you my letter of October 1, 1991, a MITI document "Tentative NIPT Schedule" was received. An English summary of this document, however, has not been prepared since an unreturned telephone call to Eugene Wong suggests that he now has all the information he needs on NIPT. Thus, I will suspend this part of my activities to be of service to you. If there is any other area in which I can be of use, please let me know.

With best wishes.

Sincerely yours,

Yoshio Shimamoto

Washington, DC 20503

Dear Dr. Bromley:

We wanted to write you once again to bring to your attention possible opportunities to speak to top business leaders in North Texas.

Earlier this summer we wrote you about the possibility of arranging a trip to the Dallas-Fort Worth area to speak to a CEO policy briefing. We would like to renew our invitation to you. These policy briefings are sponsored as a public service by Arthur Andersen & Co.

The purpose of the policy briefing is to expose leaders in the business community (mostly CEOs, presidents and other top level executives) to the policies of the current administration and to allow the exchange of ideas between government and the private sector.

This summer we arranged speaking engagements and ancillary press interviews for IRS General Counsel Hap Shashy, EPA Deputy Administrator Hank Habicht and U.S. Ambassador to Canada Edward Ney.

We look forward to working with your staff to help arrange a trip to North Texas. We can either accommodate any travel expenses or join as an added event to an already scheduled trip to the Dallas-Fort Worth area.

Please call us if you have any questions or need any additional information. We look forward to the opportunity to welcome you to North Texas.

Sincerely,

Merrie Spaeth

November 8, 1991

Dear Ingo:

Many thanks for your letter of October 15 in which you tell me of the celebration that you plan to honor Eugen Baumgartner on his 65th birthday.

I would very much like to have been able to be present on December 5, but unfortunately, I am already committed to giving a major talk elsewhere on that date and, in consequence, simply am unable to be in Switzerland at that time.

Please convey my warmest best wishes to Eugen and Iris with the hope that they will continue to share a long, happy, healthy, and rewarding time together. I know that Eugen will never actually retire as far as physics is concerned, and I wish him every satisfaction in his continuing research activities as well.

With warmest personal regards,

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

P.S. I am enclosing herewith a letter addressed to Eugen that you might wish to pass on to him at whatever time seems appropriate.

Professor Ingo Sick

THE WHITE HOUSE
WASHINGTON

November 8, 1991

Dear Eugen:

Just yesterday I paid a brief visit to the University of Rochester and it seems difficult indeed to adjust to the fact that it has been some 40 years since Pat and I met you and Iris at the railway station in Rochester at the beginning of your fellowship year there.

It seems equally difficult to admit to the fact that you are considering anything vaguely resembling retirement or that both of us have reached the age of 65.

I wish that our scientific paths had crossed more frequently and I want to take this occasion to congratulate you for the very effective leadership that you have provided for your area of physics at the University of Basel, and for your many contributions to the world of physics generally.

I deeply regret that I cannot be present on December 5 to convey these congratulations and my warmest best wishes for the future in person but, unfortunately, I have a long-standing commitment for a major talk elsewhere on that date.

Let me simply wish you and Iris a very long, healthy and happy life together with every success and satisfaction in whatever activities you choose to undertake.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

WASHINGTON

November 8, 1991

Dear Mr. Smith:

Thank you for your letter of October 10, 1991, inviting me to be a guest speaker for your conference to be held in the Spring of 1992. I apologize for the much belated response.

As you can appreciate, the number of invitations I receive that entail traveling out of town is overwhelming, and I am finding that I cannot be away from Washington as much as I am asked. Although I would like to join you and your colleagues, the next several months are already heavily committed, so I must regretfully decline.

I appreciate your thinking of me and would like to offer my best wishes for your conference.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with a large initial "D" and a long, sweeping underline.

D. Allan Bromley
Assistant to the President
for
Science and Technology

Mr. Gary Smith

THE WHITE HOUSE

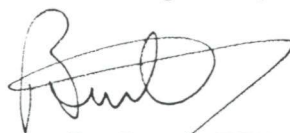

WASHINGTON

October 17, 1991

Dear Allan:

Lucie sent me a copy of this letter that she wrote to you on October 10th. I don't know if you know her, but she really is a marvelous woman, the widow of Stu McKinney who was a long-standing Congressman from Connecticut. Lucie is a star and her organization is very worthwhile and I told her that I would vouch for her to you!

With best regards,

Burton J. Lee, III, M.D.
Physician to the President

Dr. D. Allan Bromley
Assistant to the President for Science
and Technology and Director
The White House

~~Don't~~
Don't think this is
worth either your
time — do you?
All

MQ

Pls check w/ DA about this org.
DAB says they have written
before. He is inclined not to
do this; however, he wonders
if this is a legit group and
if someone (read Life Sci)
should do it?!

Danar

Note: it was
sent to his home ☺

Jamar

I believe this is wholly legit! But it is only one of a host of similar organizations devoted to providing support to the AIDS program. They provide a valuable service and help and are certainly to be encouraged but this, as others, cannot be high on an OSTP priority scale. I believe a letter from Helan declining their kind invitation is all that is indicated.

JA.

UN
Pls. sweetly
but firmly decline!

Lucie McKinney, Chairman

October 10, 1991

Allan D. Bromley, PhD
6717 Tulip Hill Terrace
Bethesda, MD 20816

Dear Dr. Bromley,

On behalf of the Stewart B. McKinney Foundation, we would be honored if you would accept our invitation to be our guest speaker for a one-day conference, co-sponsored by our organization and Sacred Heart University in Fairfield, Connecticut.

The topic planned for that day will be "H.I.V. and Substance Abuse". Conference attendees will be medical professionals and educators from schools and colleges in the northeast corridor, many of whom have formed academic alliances to develop A.I.D.S. Education models for their respective communities.

The conference is planned for the spring of 1992, the day to be determined by your availability.

Enclosed is a packet of information regarding our foundation's history and programs. Included with this, I've attached information on a recent conference we sponsored with N.E.A.S.C. and Sacred Heart University. As a result of this conference, we provided seed money to newly formed academic alliances to develop A.I.D.S. education programs for their own communities.

It is my hope that you will find us worthy of your time, and join us for what I know will be another important step in the battle against this most destructive disease, A.I.D.S.

Best regards,

Gary Smith

Gary Smith

c: Burt Lee, M.D.

*Burt - any help you
can give us will be
deeply appreciated - Thanks*

*Love to all
Lucie*

THE WHITE HOUSE

WASHINGTON

October 23, 1991

Dear Guillermo:

It is with great regret that I write to inform you that I will be unable to attend the meeting of "Science Advisers to Heads of Government" that you are so graciously hosting in Ixtapa on November 14-16. The President's Council of Advisors on Science and Technology, which I chair, will meet with President Bush on November 15 and the President has asked me to attend a number of functions for him on November 16 and 17. These are obligations, I know you understand, that I must fulfill.

I am very sorry that I will miss the gathering. I was looking forward to meeting with my Western Hemisphere counterparts and I shall greatly miss what I know will be a most worthwhile exchange of views. I am pleased to inform you, however, that Dr. Fred Bernthal, Deputy Director of the National Science Foundation, has agreed to attend for me. Fred has a long association with domestic and international science matters and I am confident will represent the United States well in Ixtapa. I look forward to his report following the meeting.

Again, my apologies, and thank you for your understanding.

Sincerely,

D. Allan Bromley
The Assistant to the President
for
Science and Technology.

Dr. Guillermo Soberón
Coordinador General del
Consejo Consultivo de Ciencias de la
Presidencia de la República

THE WHITE HOUSE
WASHINGTON

September 20, 1991

Dear Dr. Schmid:

Many thanks for sending me a copy of **Technology Innovation**. This is a vitally important area and you and your colleagues are to be congratulated for the work that you have done in putting out this new statement concerning a vitally important aspect of our utilization of the tremendous resource that is represented by our national laboratories.

My staff and I have already found this to be an extremely useful document and it is one that I am sure will become substantially dog-eared from continued use in the future.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

August 29, 1991

The Honorable D. Allan Bromley
Director, Office of Science and Technology Policy
Executive Office of the President
Old Executive Office Building
Washington, DC 20506

Dear Dr. Bromley:

The FLC is providing the document *Technology Innovation* to meet the need for a consolidation of technology innovation legislation from the Stevenson-Wydler Technology Innovation Act of 1980 (PL 96-480) through the Defense Authorization Act for FY 1991 (PL 191-510). We are distributing this document to a number of agency, laboratory, and industry people. We trust it will be a very useful tool for understanding the opportunities available for domestic technology transfer.

We hope that you will find this FLC document of value to you in your technology transfer program.

Sincerely,

Loren C. Schmid

Dear Allan,

There seems to be a new season of "Science Policy Review" exercises on the go in many corners of the world, and we are not immune. I give a paper in August to a conference which parades under the omnibus title

"Science Policy and Research Management"
with my (pre-chosen and not by me) title being
"Universities as patrons of basic research".

I have a mass of well digested material which I have used over the years but it is really time that I used the latest available material. I have asked a contact in the UK for their latest, and similarly one in Tokyo for their latest. I wonder if your secretary could assemble from readily available current thinking in the US some material and air mail it to me ?

What I, in particular, have never had is some kind of breakdown on the determined subdivision of research resource as between major fields such as physical sciences, earth & atmospheric sciences, biological sciences, medical sciences, engineering sciences, the humanities and social sciences, etc. Does such exist ?

If the pressures on your time and energies are such that this is an unreasonable request, please do not break a gut as I should have

2.

sufficient material, especially from the UK (which may not be the best example to follow from what Bill Mitchell tells me regarding the Daresbury affair)

I trust you are keeping well and not overdoing it. Thank you for meeting with Rein Arndt — he appreciated it greatly.

I am off to CERN tonight for one week of a two week run, using 200 GeV electrons. Naturally the target is diamond !! It is a very exciting effort and follows on the channeling radiation work that I started some years ago at 4 MeV and have taken up to 100 MeV. At the GeV energies it is no longer channeling radiation in the resolved photon energy states sense, but coherent bremsstrahlung. If all works according to prediction, we will have new opportunities for ultra-high energy monochromatic photon induced reaction studies — so hold thumbs for us during the next week !!

With kind regards,

Friedrich

THE WHITE HOUSE
WASHINGTON

July 31, 1991

Dear Dick:

We really miss you here in Washington and you can be justly proud of what you accomplished during your Washington stay.

You were a rather rare bird here in the sense of having a full understanding of the academic world as well as the ability to thread through the intricate minefields of the political scene.

I have been able to convince Boyden Gray to take up the Chairmanship of the Biotechnology Working Group operating under the Vice President's Competitiveness Council and hope that this will prevent it from backsliding in your absence.

Let me say again what a great pleasure it was working with you, particularly on matters of global change. I hope that our paths will continue to cross and, in the meantime, wish you every success and happiness.

With all best wishes,

Sincerely yours,

D. Allan Bromley

July 31, 1991

Dear Kurt:

I was delighted to have the opportunity to see you at the luncheon for Don Langenberg and it seems indeed only a very few years since you were raising hell as a Yale undergraduate.

Everything I learned about Baltimore suggests to me that you have done an absolutely outstanding job and that you have even better plans for the future. As a Maryland resident now of two years standing, I have a much more personal interest in the fate of the state's largest city and will indeed look forward to an opportunity to work with you and Don Langenberg to bring some of these great plans to further fruition.

It was most thoughtful of you to provide me with the memento of the occasion and not only is it beautiful, but it is something that I shall treasure.

Again, my thanks. With warmest regards and all best wishes for every success in the ambitious programs that you have laid out for yourself and for the City of Baltimore.

Sincerely yours,

D. Allan Bromley

Dear Dr. Bromley:

It was good to see you again at the luncheon for Don Langenberg. I am delighted Dr. Langenberg has taken the helm of The University of Maryland, knowing of his commitment to a university's role in urban centers.

I wanted to thank you for your kind words about Baltimore and your understanding of the vision we are pursuing here. We have shown in Baltimore how public-private partnerships can transform urban decay into a vibrant revitalized city center. That same partnership has now developed the Columbus Center for Marine Research & Exploration and is providing the foundation for the strengthening of Baltimore's human resources.

I hope we will have an opportunity to work with you to "enhance America's technology leadership."

All the best.

Sincerely,

Kurt Schmoke

THE WHITE HOUSE
WASHINGTON

July 30, 1991

Dear Professor Dr. Seeliger:

Many thanks for your letter of April 30 which has taken an enormous amount of time to reach me here in Washington, in part because it came by way of my Yale office.

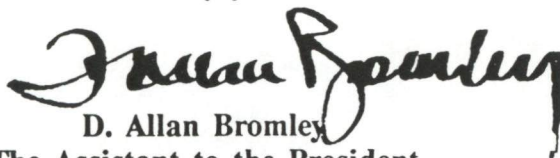

As you will gather from the present letterhead, I am currently on leave from my Professorship at Yale and am serving in the Bush Administration in Washington. That being the case, I am afraid that it would be both impossible for me to plan to attend the International Symposium that you are planning and inappropriate for me to serve as a member of the International Advisory Committee.

Let me only thank you for thinking of me in this connection. Were I still at Yale I would be most enthusiastic about joining you and would be honored and delighted to accept your invitation to serve on the Advisory Committee. You will understand, however, that the demands on my time at present are such that I am unable to maintain more than token contact with my professional work in nuclear physics.

Let me wish you every success with your planned symposium. I regret that I will be unable to join you.

With all best wishes,

Sincerely yours,

D. Allan Bromley
The Assistant to the President

Prof. See/Mi

30. Apr. 1991

Dear Dr. Bromley,

the Technical University Dresden in co-operation with the International Atomic Energy Agency in November this year organizes the XXI-st International Symposium on Nuclear Physics

"From spectroscopic to chaotic
features of nuclear systems".

It is the intention of the organizers to continue the annual Nuclear Physics Symposia in Gaussig as a meeting especially for close east-west and north-south scientific contacts and co-operations. It seems to us, that also after the dramatic political changes in Europe the needs for organizing of such conferences are still evident. It is also the intention of our 1991 symposium, to attract the most active and productive scientists from Eastern Europe including the Soviet Union, the P.R. of China and from all the other countries. You are well-known in the international scientific community of Nuclear Physics.

Therefore, I would like to ask you, whether you are willing to support the idea of this Symposium as a member of its International Advisory Committee. Especially we would like to get from you comments concerning the conference topics, but also suggestions of speakers and presentations at this meeting.

The first announcement included gives a first impression about the planned scope of the meeting. Following the recommendations of the advisers, we will further specify this topics. Both theoretical and experimental investigations will be presented.

We hope very much, that you will accept this invitation and send your comments to us, soon. Thank you very much, in advance

Sincerely yours

Prof. Dr. D. Seeliger
Chairman of the Org. Committee

SOCIAL PROGRAMME

As foreseen in the programme, a conference banquet, an excursion to Saxonian Switzerland and a concert in the Gaussig castle will be organized. On special request, sightseeing in Dresden and visits to performances in the famous Semper Opera Dresden can be arranged.

FURTHER INFORMATION

The weather in Dresden in the beginning of november is usually moderate and sometimes rainy with average temperature of about 8-12 °C.

The scientists interested in registration or further information are kindly asked to send back the enclosed registration form no later than April 30, 1991.

THE WHITE HOUSE
WASHINGTON

July 30, 1991

Dear Ms. Smilga:

I attempted on a number of occasions to return the call to the number listed in your letter of June 20th in which you indicated an interest in interviewing me as a long-time Queen's alumni. Unfortunately, I gather that your duties keep you out of your office a large fraction of the time so that we have not yet made contact.

I write to you to, first of all, indicate that I would be happy to arrange an interview with you if that can be done within your schedule. I expect, however, to be out of the country during the first week in August and the last two weeks in August so that I will in fact only be here in my office from the 12th through the 15th inclusive, as well as on the 1st and 2nd. Unfortunately, those days are already very heavily scheduled because everyone who insists they have to see me before I leave is already lined up.

You mentioned that a telephone interview might be sufficient and that we could certainly arrange on one of those days at 202/456-7116.

I gather that you will be going back to your classes at the end of summer but just in case, I shall be in the office September 3 and 4, September 11 and the entire week of September 16.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", with a stylized, flowing script.

Dear Mr. Bromley,

As I am sure you know, this year marks Queen's Sesquicentennial Anniversary, and thus has sparked a lot of interest in Queen's history. A great deal of Queen's strength is drawn from her Alumni and therefore there has been a renewed interest in the lives of Queen's students following graduation.

I am a summer student working for Alumni Relations at Queen's and it is my job to follow up on the careers of notable Queen's graduates. It is remarkable how outstanding students at Queen's become outstanding alumni.

I believe that you meet this description perfectly. You had a distinguished career at Queen's and then went on to become a prominent member of your community.

I realize you must be very busy. Nevertheless, I was hoping to meet with you sometime this summer to discuss your success as a Queen's Alumni. If this seems impossible, perhaps a telephone interview can be arranged.

I look forward to hearing from you soon and I am able to meet with you at your convenience.

Have a happy and healthy summer.

Sincerely,

Lara Smilga

July 24, 1991

Dear Bill:

It is good to know that you will be attending the Mt. Kisco meeting in early October and Bill Golden has told me of his very pleasant and productive discussions with you.

I must say that I will be delighted to support your invitation that the next meeting of the group take place in the United Kingdom at a convenient time in 1992 and I agree that May or June would be entirely appropriate. This is something that I would assume the group would wish to decide in a collegial fashion but I am confident that the group will indeed be happy to accept your invitation.

I hope that all goes well with you and look forward to the possibility of seeing you in the not too distant future in London. I shall be in touch with your office as soon as my travel plans become a little more definite, but it now looks as though the first week in August is the target date for a quick visit to London, Paris, and Bonn.

One of the things that I would particularly like to discuss with you at that time would be topics which you feel appropriate for inclusion in the agenda of the October Mt. Kisco meeting.

With warmest best wishes,

Sincerely yours,

Dear Allan,

I am delighted that the Carnegie Commission has been generous enough to host the second meeting of G7 and Soviet science ministers and advisers in October. This should reinforce the group's future effectiveness.

We agreed at Mount Kisco in February that the location of future meetings should, in principle, rotate. As I mentioned to you recently, I would like to propose that the following meeting should take place in the United Kingdom at a mutually convenient time in 1992. Early summer, May or June, might be an agreeable period. Can you take this as an invitation to host the first post-October 1991 meeting in the UK. We could lay on a good show. We could of course discuss the precise timing.

With very best wishes.

*Yours ever
Bill*

Dear Allan

CARNEGIE GROUP.

It was good to hear from you and I am looking forward to a continued and valuable exchange of views when we meet on 4 - 6 October. I had an enjoyable and profitable meeting with Bill Golden here in London a few weeks back and I will write to you shortly about possible topics and concerns for consideration when we meet.

I mentioned to Bill that the UK would like to host the following meeting of the Group - possibly in late May or June 1992. If you were content, I would probably need to talk to others in advance to gain some support and we might consider how best to achieve that. In any case - yes 4- 6 October and I look forward to seeing you then.

PROFESSOR WILLIAM D P STEWART

THE WHITE HOUSE

July 9, 1991

Dear Nick:

Many thanks for the beautiful site photograph of Brookhaven as well as the section from one of the RHIC prototype magnets. Apart from being a very interesting abstract piece, the latter would make a superb sea anchor and the postal people here brought it in with their knees wavering.

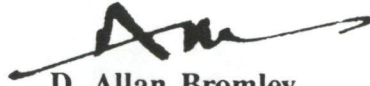

Unfortunately, the present flap about the space station is making my life vastly more difficult than it need be. The competition is widely misunderstood and is not between space and science nor is it between big science and little science. As the chairman of the House Appropriations Subcommittee made extremely explicit, it is between investment in the future and immediate consumerism.

If the scientific and technical communities become identified as leaders in the fight against the space station in the Senate, there are a sufficient number of people, both in the Administration and in the Congress to be more than a little vindictive when we come to the FY '93 budget negotiations. I have been spending most of my time of late trying to convince people that the argument for the space station's construction is not now, nor has it ever been, science but rather purely adventure and the first step for the human species away from the home planet. Once we get a space station for that reason, then there is some excellent science, particularly in the life sciences area, that really must be done before we can take the next step and I am quite prepared to believe that there may be some very interesting microgravity studies as well. Neither the microgravity nor the life sciences, however, of themselves can provide any adequate justification for moving forward with the station.

It was good to see you and to have the pleasure of meeting your daughter at the Academy meeting, and I look forward to our paths crossing soon.

With warmest best wishes,

Sincerely yours,

A handwritten signature in black ink, appearing to read 'D. Allan Bromley', with a long horizontal stroke extending to the right.

The Honorable D. Allan Bromley
Assistant to the President for
Science and Technology
Old Executive Office Building
17th & Pennsylvania, NW
Washington, D.C. 20506

Dear Allan:

I would like to thank you for being our keynote speaker at our Relativistic Heavy Ion Collider "Beginning of Construction Ceremony". The staff, knowing of your previous relationship to RHIC, appreciated the significance of you being there.

It was a great day for Brookhaven, the Department of Energy and American science. After a lot of hard design work, our staff had the pleasure of seeing the symbolic first magnet being transported from the outside assembly area to the inside of the ring. We now turn to the exciting task of bringing this machine into being in the next few years and to develop detectors for the first round of physics experiments. RHIC will play a major role in the world of nuclear physics giving us a unique probe into states of nuclear matter similar to those that occurred in the first moments of the creation of the universe. Truly an exciting program!

To commemorate this event we have prepared a plaque made from a thin cross section of one of the prototype magnets. One of these is being sent to you for your enjoyment. We are also producing for you one of those large aerial photographs of the laboratory.

Again, thanks.

With best regards,

N. P. Samios
Director

THE WHITE HOUSE
WASHINGTON

July 8, 1991

Dear Howie:

It was good to see you again at the Langenberg inauguration and I have been remiss in not writing to you earlier to thank you for the excellent book entitled **Science and Corporate Strategy** that you were good enough to send with your letter of May 10th. As you know, I have spent a lot of the intervening time since I was in Wilmington on some extensive travelling in the Soviet Union, including Siberia and the oriental republics, and so my correspondence is more than a little behind.

I very much enjoyed the time I spent during the awarding of the Lavoisier Medals and was very much impressed by the remarkable achievements of those being recognized. You and your associates can be justly proud of what Dupont has accomplished for better things for better living.

I particularly enjoyed our luncheon and the opportunity to meet a number of your colleagues and I do look forward to taking you up on your invitation to come to Wilmington to see what actually goes on in the research end of your activities.

As you know, Bill Phillips has decided that he must leave by the end of summer and I am still very much in the market for a replacement. Your assistance and suggestions will be very much welcome.

Please give my warmest best wishes to Doc, Al and Dick. I look forward to seeing all of you before too long.

In the meantime, if your travels bring you here to Washington, give me a little warning and I would be delighted to take you to lunch at the White House Mess.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Allan:

I want to thank you on behalf of all of us in Du Pont for the truly outstanding talk you gave at the Lavoisier Medal awards. I have heard personally from a very large number of the people who were there and both you and the contents of your remarks came across in great fashion. Your thoughts were right on the mark for such an occasion and greatly helped to make it the success it turned out to be.

I'll call you in the next month or so and see if we can find a time in the future that it would be convenient for you to visit us again. I would very much like to show you the Experimental Station and the kinds of research going on in a highly diversified company like ours. There are others here, too, who might want to discuss issues with you and we could balance the day any way you prefer.

I have enclosed a copy of "Science and Corporate Strategy" by David Hounshell that I think you might enjoy. The book is a history of R&D in Du Pont for which we made all our records available to the author who did a very fine job.

Doc, Al, and Dick join me in thanking you again for helping to make the day so successful.

Best personal regards,

Sincerely,

H. E. Simmons

Dear David:

It was good to see you and Virginia at the Academy meeting and I hope that Virginia's prognosis remains an excellent one. She looked great at the Academy garden party!

Unfortunately, after 44 wonderful years together with Pat, it will never be the same but I can only be thankful for the years we had together. I much appreciated your thoughtful note.

It is always encouraging that occasionally people say the odd good thing when your back is turned because there are always a great many of those who are prepared to administer the harpoon whenever the occasion presents itself.

I recently heard from some folk abroad who asked some leading questions about you and apart from telling them that you walk frequently on water, the reply was a very enthusiastic one.

I can well understand that the return to "full time research and teaching" can be somewhat boring and this, of course, is a problem that I spend more and more of my time thinking about because, although my leave from Yale continues, it is not at all clear that I could go back to anything like my former position, and also not at all clear that the kind of new position that would be attractive would be feasible.

I shall certainly keep you in mind if anything interesting develops here in Washington and, in the meantime, let me wish you and Virginia a very happy and healthy summer.

With all best wishes,

Sincerely yours,

PERSONAL

Dear Allan,

We enjoyed seeing you at the Academy, and in the Academy.

Virginia and I were terribly sorry to learn of Pat's illness and of the outcome. We intended to say something last week, but the Garden Party was the wrong setting. The news had reached us very late because we were away and had problems as well. You were kind to write in September and to share your situation with us. Virginia has finished chemotherapy: her prospects are unclear.

I have heard frequent, and uniformly positive, comments about your achievements in the White House. I'm sure you have, too, but you should know that people also say it when you are not there to hear it.

You asked about my plans. I had nothing definite arranged when our life became complicated last year, so I decided to return here and give teaching and research a try. To no one's surprise, it works well but it is very boring, so I'd like to find something different to do. I'm also fed up with living in Berkeley and being introduced as the ex-Director of LBL. If you hear of something interesting, please keep me in mind.

Our very best wishes in all your endeavors.

Cordially,

David A. Shirley

THE WHITE HOUSE

WASHINGTON

July 9, 1991

Dear Scott:

Many thanks for your letter of June 10th which arrived while I was in the depths of Siberia, hence some of the delay in responding.

I am delighted to learn that you are getting physics by osmosis and somehow I have the feeling that your continued contact with physics suggests that you really should have stayed with it back in the early days.

Larry Sulak and his colleagues have done a fantastic job in strengthening physics research at Boston University and whenever I have the opportunity I would look forward to getting together with the group you mention in Boston. Unfortunately, I have to tell you that I am horribly overscheduled and the probability of my getting the necessary half day free anytime in the near future seems vanishingly small. During the period when Pat was ill I deferred all foreign travel so that a great many commitments piled up and I am now addressing them one by one.

You mention, however, that your work occasionally brings you to Washington and so, if you would give me a little warning, I would be delighted to invite you to have lunch at the White House Mess and we could at least begin to catch up on what has been happening over recent years.

Please do let me know when you might next be in town. My telephone number is 202/456-7116, and I will look forward to hearing from you.

With all best wishes,

Sincerely yours,

D. Allan Bromley

Dear Scott:

You are indeed correct that an enormous amount remains to be accomplished before SSC is an operating facility.

It had escaped my notice that Carlo Rubbia had left Harvard and moved over to Boston University, but I am not totally surprised, either by his departure from Harvard or by his arrival at B.U. I have been very much impressed by Larry Sulak's success in establishing a first-class physics department and by generating a very real sense of excitement in it.

I had also been unaware that you maintained a Washington office. When you are next in Washington, do give me a call, and if I am not completely tied up, I would look forward at least to saying hello.

With all best wishes,

Sincerely yours,

Science & Technology
The White House
Washington, DC

Dear Allan:

While in New Haven recently for Nancy's 20th reunion, I was reminded again of the many valuable but unappreciated (at the time) aspects of the university. Despite your kind letter of last June, I still maintain to family & friends alike that I was certainly one of the least distinguished physics students ever to grace the campus. However, that did not stop me from loving the subject, and as you know I have achieved a redemption of sorts by working with Larry Sulak to build the new physics research building at Boston University. He has become not only a colleague but a close personal friend, and through Larry I have had the chance to meet several other very impressive practitioners of the art (Shelly Glashow and Norm Ramsey are both close neighbors of Larry's; Carlo Rubbia, Sam Ting, Steven Weinberg). Under Larry's tutelage I have also been doing some physics reading, and it's actually beginning to make some sense, thanks (no doubt) in part to the foundation that you laid in my head some twenty years ago. Anyway, your efforts were not entirely in vain, and sincere thanks are due.

I have also been following events in Texas very closely, and am aware of some of the recent scientific, financial and political dust swirling around the SSC. The name of Bob Matyas may be familiar to you--we are jointly engaged in a medical project in Connecticut and he keeps me pretty well informed. During visits to our Georgetown office, I keep meaning to contact your office but so far I have not been able to get free.

The purpose of this note, aside from saying thank you again for your patience when I was a student, is to see if you might be interested in attending a small dinner party with a select group here in Boston that would include Sulak, Glashow, Ramsey, Matyas and perhaps Helen Edwards. The purpose would be both convivial and also a chance to see what might be done to shed some sunlight on the SSC situation.

CANNON

I realize that your time is exceedingly tight, and I would need to get some idea of possible dates from you before other arrangements are made. If you are interested and might be free, please let me know. It would be a great pleasure to see you again, and hopefully the evening would be both enjoyable and fruitful for all concerned.

Sincerely,

A handwritten signature in cursive script, appearing to read "Scott".

Dear Alan:

I notice that you have become CEO in addition to Director which I gather represents simply more legal responsibility rather than more pay. I believe it is known in the trade as "psychic reward."

I was absolutely delighted to get the piece of the CP-1 reactor graphite in such an attractive format. I will indeed consider it a down payment on my postponed colloquium appearance and will be happy to arrange to come out to Argonne definitely sometime this fall when it is convenient for both of us. I am looking forward to the opportunity.

Again, my warmest thanks, and thanks also for taking the time to be with us in the Soviet Union. I hope that your return was relatively painless.

Sincerely yours,

D. Allan Bromley
