THE WHITE HOUSE

WASHINGTON

December 24, 1991

Dear Dr. Green:

Many thanks for sending me the reports of the Human Frontier Science Program. When I was in Strasbourg in early December I had an opportunity to meet with Sir James Gowans and a few of his senior staff. I also had an opportunity to meet with the Mayor of Strasbourg and the President of the University of Strasbourg and was treated to a rather remarkable display of local support for Sir James and the Human Frontier Science Program by his Strasbourg neighbors.

As you know, when I was in Japan in October, I told the Japanese that the President would be announcing our firm financial support for the HFSC during his visit now scheduled in Tokyo for January 7-10. As you also know, the funding that had been agreed to for this particular support of the program was obtained equally from DOE, NSF, NIH and partially from NASA. Although the President clearly will make the announcements in Japan, there has, I am afraid, been a wide array of leaks so that the exact amount that we have been contemplating is already known to the Japanese and clearly expected.

In my discussion yesterday with Dr. Healy, she mentioned the possibility that NIH might be unable to be forthcoming with its agreed contribution to the HFSC and while I understand the pressures that might suggest such a course of action, I would very much hope that because of the President's personal involvement in this matter that NIH would find it possible to make the original contribution.

With all best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley", written in a cursive style.

SUBJECT: Report of the Human Frontier Science Program

Sir James Gowans, the Secretary General of the Human Frontier Science Program (HFSP) has asked me to forward a copy of the HFSP report to you. He told me that an earlier, proof copy had been sent to Dr. Ratchford. The report, in three thin volumes, covers the program through July 1991.

As you know, Dr. Mary Clutter of NSF and I are serving as Trustees.

If you have any questions, please let me know (301-496-7211).

Jerome G. Green, M.D.

WASHINGTON

November 16, 1992

Dear Dr. Hofmeyr:

I am responding to a fax received from Professor Friedel Sellschop dated November 13 in which he tells me of the new regulations that require universities in South Africa to return statistics on so-called **Personpower Inputs in Respect of Research and Development**.

Although we in the United States have never attempted anything even closely approximating the detail that is being considered in South Africa, I can tell you that the requirement that university faculty carry out effort reporting has caused more friction and inefficiency in our system than almost anything I can think of. In consequence, my office, working in close consultation with the Office of Management and Budget, both in the Executive Office of the President, are just finishing a new revision of the so-called Circular A-21 that governs the accounting relationships between the Federal Government and the universities. One of our major goals in that activity was the total removal of effort reporting.

Faculty effort reporting is by the very nature of professorial activity impossible because, when sitting with a graduate student planning a research program that will subsequently be proposed to a federal agency, it is absolutely impossible to allocate the effort to teaching, research, or administration when, in fact, all three are inextricably coupled and proceeding simultaneously. Indeed only in this way will one find successful graduate education in our view. Despite this there have been brief occasions when the U.S. has focused on accountability at the request of the Congress and has requested that faculty do indeed report on their effort. This has led to an enormous amount of waste, time and effort as faculty members argue with administrators in the universities to neither's advantage and an enormous amount of time is wasted. As a secondary effect such reporting tends to pit faculty members against administrators because, in order to administer regulations of this kind, one obviously needs more bureaucrats or at least most university administrations believe that to be the case. When these new individuals are hired, faculty members obviously look upon them as competitors for scarce research funding and, instead of a cooperative relationship between faculty and administrators, one very quickly builds an adversarial one.

We are just now completing two major reports on the interface between our federal government and the research intensive universities. These will be issued in mid-December and we will be happy to see that you obtain copies. The important point is that we are trying to simplify the regulatory burden on our universities by eliminating a lot of what is now recognized as worthless statistical reporting.

A lot of the reporting reflects a fundamental misconception that in the government's dealing with universities what it is procuring is research rather than investing in the national future. To the extent that one deals with procurement the argument is that the same sort of regulation should apply to a procurement of research as applies to procurement of a battleship. And this is obvious nonsense. In our situation, at least, the investment strategy has worked extraordinarily well. It was invented in 1946 by two far-sighted individuals in the Office of Naval Research who based the entire federal support of universities from that time until the present on three deceptively simple rules:

- a) Select the best people in the country on the basis of peer review,
- b) within the limits of available funding support them to do whatever they decide that they wish to do, and
- c) keep the hell out of their hair while they are doing it.

Although from time to time we have tended to fuzz up our adherence to these basic precepts, particularly the third one, they have served us extraordinarily well.

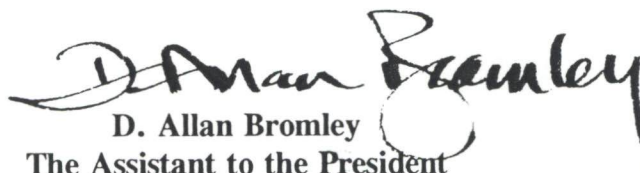

It is my firm conviction that the only appropriate way to judge the success of federal interaction with the universities is to focus on output rather than input beyond the most elementary of input statistics such as total dollars and total number of people, including students and faculty.

Obviously I would not favor a system such as Friedel describes and am convinced, on the basis of U.S. experience that it will tell you very little of interest, will create enormous dissention within the universities, and will substantially reduce the efficiency of your entire research operation.

I hope that these comments will be of some use to you.

With all best wishes,

Sincerely yours,

A handwritten signature in black ink, reading "D. Allan Bromley". The signature is fluid and cursive, with the first name "D. Allan" and the last name "Bromley" clearly distinguishable.

Dear Allan

November 13 1992

REQUIREMENT ON UNIVERSITIES TO RETURN STATISTICS ON SO-CALLED PERSONPOWER INPUTS IN RESPECT OF RESEARCH AND DEVELOPMENT

I appreciate that this is not your bailiwick but I should value your advice or an appropriate referral.

One of our government departments is seeking to impose on universities in this country a reporting mechanism in respect of the utilisation of personpower on research and development.

The specific requirement would be that under each of a number of categories, eg agriculture and renewable natural resources, architecture, health sciences etc we report the input in personnel time and salary costs into research and development under a series of specialist subcategories. The personpower reporting would be in terms of the different grades, ie teaching/research professionals, administrators, professional support personnel, technicians, non-professional employees, tradespersons, service workers (ie cleaners).

A member of faculty would therefore be reporting time spent on his or her research by category and subcategory of subject matter, then in terms of whether it were basic research, applied research or developmental research. This would be done in respect of every administrator, secretary, technician and cleaner.

Thereafter we should have to make a financial return on the salaries paid, in other words how much in financial terms had gone into a particular category and then subcategory, and then into the same categories broken down into basic, applied or developmental research.

We are obviously making the strongest possible protest on the grounds of the impossibility of returning meaningful data, the enormous expense involved in such an exercise and, not least of all, the uselessness of the data returned.

It seemed to me however that we should canvass international

Extended Page

It seemed to me however that we should canvass international experience in this regard. Hence this letter.

The University of the Witwatersrand rejects racism and racial segregation. It is committed to non discrimination particularly in the constitution of its student body, in the selection and promotion of its staff, and in its administration.

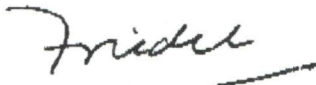

Do you know of any State funding system for universities which requires data of this nature, ie "input" rather than "output" ?

Is there anyone to whom I could make reference in this regard ?

I appreciate that you will be deeply involved in the transition process at this time, but I should appreciate it if you could fax a brief reply to Rob Hofmeyr in the Vice-Chancellor's Office, fax +27 11 339 8215. I shall be in the United States for the next week, so he will be handling the matter in my absence.

With all good wishes

Yours sincerely

J P F Sellschop
Deputy Vice-Chancellor (Research)

THE WHITE HOUSE
WASHINGTON

November 13, 1992

Dear Hannock:

It is with the greatest shock and sense of true tragedy that I have just learned of the death of President Ben-Porath and his family. There is little that anyone can say at such a sad and bleak time that is of any real help. Let me only say that the thoughts of the entire academic world are with you as you shoulder the heavy responsibilities that have devolved onto your shoulders.

President Ben-Porath contributed in major fashion to the growth of both the reputation and the intellectual capacity of the Hebrew University -- as I am sure will you your turn. His loss will be most sorely felt within your university, but far beyond it as well.

Let me than both personally and on behalf of President Bush and the American academic community express to you our deep sympathy and our warmest best wishes for every success as you move forward at the helm of your great institution.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Bromley", with a long, sweeping horizontal line extending to the right.

Dear Ernie:

Many thanks for sending me the joint statement by the Presidents of the American Physics Society and the European Physical Society regarding extensive collaboration on large physics projects. I am totally in accord with this statement and appreciate having it.

As you may be aware, at the first ministerial meeting of the OECD last May, I was successful in introducing many of these same ideas and in having the OECD agree to set up a megascience forum which is already in operation.

My intent here, to which the members of the OECD enthusiastically agreed, was to provide a forum so that one could really have a truly international approach to the establishment of large programs or large facilities. We envisaged that this would involve a series of meetings: first of the representatives of the international scientific community who would be asked to try to develop a consensus as to the questions that require answering if progress is to be made in the field. With those in hand one would then bring together instrumentation specialists who could address the question of what facilities of what particular specification would be required to provide answers to these important questions. Then finally, a much more political group of representatives would be brought together to discuss the matters of funding, the site, and operating support and the hope would be that all of this would be done before any actual decision would be reached on the particular device, where it was to be located or how precisely it would be operated.

In this respect it seems to me that the SSC and the LHC may well be the last of their breed and I very much appreciate the readiness of the APS and EPS to participate in the kind of discussion that I think will be undertaken by the OECD forum augmented by representatives from Eastern and Central Europe from the very beginning. At this most recent meeting Minister Saltykov, of the Soviet Union, was present at my formal request to the OECD. It was then agreed that representatives from Poland, Hungary, Rumania, and Bulgaria would also attend.

Meetings of working groups preparing for a full meeting of this forum are already underway and I anticipate the forum to be in full operation within the year.

Again many thanks for the statement and congratulations on it.

With warmest best wishes,

Sincerely yours,

A Joint Statement by the Presidents of the American Physical Society
and the European Physical Society

Regarding

EXTENSIVE COLLABORATION ON LARGE PHYSICS PROJECTS

As a result of a meeting of the presidents and other executives of The APS and EPS, we jointly issue the following statement.

Physics Research increasingly relies on large facilities or instruments, each used by many scientists. These tools are required for a growing number of research pursuits that strive to extend the limits of mankind's knowledge. The great size, complexity, and cost of the facilities, and the large number of users they each serve, calls for an increased degree of international cooperation and collaboration in their planning, construction and operation.

Therefore, the APS and EPS urge an international approach to the choice, design, construction, exploitation, and possibly even selection of future very large facilities for physics research. Such an approach should be developed to the fullest extent possible, in order to use the funds allocated for research in the most efficient and effective way. A collaborative approach, which is becoming a requirement for even medium size projects in Europe, should include the United States for very large projects. Ideally, such collaborations should extend to the entire industrialized world.

The APS and EPS stand ready to assist in the organization of forums, workshops, topical conferences as well as to communicate through their respective divisions, publications and networks. They will pool their information and act in concert whenever appropriate.

In addition, the two societies strongly support the principle of open access to large facilities for all qualified researchers, regardless of their national origins.

E. Henley
President, APS

M. Jacob
President, EPS

Dear Mr. Bromley,

You have recently received an invitation to the opening of "IMPERIAL AUSTRIA - Treasures of Art, Arms & Armor from the State of Styria" at the Smithsonian on October 1st, 1992.

I have great pleasure to be the Honorary Patron of this exhibit which superbly presents significant elements of Austrian tradition. It features works of art which are fascinatingly beautiful in their masterful and intricate detail, and which are thought-provoking at the same time.

In these times of geopolitical change in Central Europe, this exhibit helps to bring into perspective the cultural and historical underpinnings of the region.

We expect to have the pleasure of the company of many key officials from the administration, business and government. I would be particularly gratified if you could join us to further enhance the occasion.

With best personal regards,

Sincerely,

Friedrich Hoess

THE WHITE HOUSE
WASHINGTON

September 9, 1992

Dear Mrs. Hawkins:

My apologies for the delay in writing to you but I have been out of the country since early August and have only now learned of the death of your husband on August 20. It was a great pleasure to be involved in his award of the National Medal of Technology last June; it was clearly very much merited.

I hope that by now you will have received the excellent photographs that were taken on the occasion of the Presidential award ceremony. I forwarded them to Secretary Franklin of the Department of Commerce with the request that she send them on to you.

I realize that there is very little that any of us can say that will be really helpful to you at a sad time like this but I wanted you to know that the very large number of members of the American Science and Technology community and, indeed, that of the entire world who knew and respected your husband are thinking of you and your family at this time.

He had a very distinguished career and was a role model for generations of young people.

Having lost my wife of 43 years a little over a year ago I know only too well what an enormous gap is left in your life on such an occasion. But I can assure you that you can look back with great pride on what you and your husband accomplished together, not only in science but in

working with the pitifully small number of young people who now are attracted into careers in science and technology.

With my deepest sympathy,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D." being small and the last name "Bromley" being larger and more prominent.

OBITUARIES

Chemist W. Lincoln Hawkins, National Medal Recipient, Dies

W. Lincoln Hawkins, 81, a retired Bell Laboratories chemist and Washington native who was a June recipient of the National Medal of Technology, died Aug. 20 at his home in San Marcos, Calif. He had a heart ailment.

At the White House on June 23, President Bush presented Dr. Hawkins with the medal and cited him for "invention and contribution to the commercialization of long-lived polymeric materials for the communications industry, and for leadership in encouraging minorities to pursue science and engineering careers."

In 1942, Dr. Hawkins, a Dunbar High School and Howard University graduate, became the first black scientist hired by the prestigious Bell Labs. He retired in 1976 as assistant director of the firm's

chemical research laboratory in New Jersey.

Over the years, he wrote three books and 55 scientific papers and was granted nearly 150 U.S. and foreign patents for work that helped revolutionize the communications industry.

He was co-inventor of an additive that stabilizes the plastic protective covering of telephone cables.

Lead insulation used in phone cables before World War II was too heavy and expensive for the big-gauge conduits needed to serve millions of new homes.

But the new plastic insulating materials quickly disintegrated after exposure to weather. The materials Dr. Hawkins helped invent and develop proved nearly impervious to any weather.

Also during those years, he worked to motivate minority stu-

dents to study engineering and hard sciences, and to recruit minorities for jobs.

His main message to young students was "science is fun" as well as telling them it provided a good living and an intellectual challenge. He tried to tell others of his incentive as a youth: "to get out there and make some of those crazy things you think of work."

He was the first chairman of Project SEED, the American Chemical Society's program to expose minority students to chemistry as a profession. He also was active in the Urban League's Black Executive Exchange Program and lectured extensively at black colleges.

Dr. Hawkins, a chemistry graduate of Howard University, received a master's degree in chemical engineering from the Rensselaer Polytechnic Institute and a doctorate in chemistry from McGill University. Before joining Bell Labs, he had taught at McGill and was a National Research Council fellow at Columbia University.

After retiring at the mandatory retirement age of 65 from Bell Labs, where he also did research in recycling technology, he stayed on as a consultant on scientific and recruitment matters. He also served as research director of the Plastics Institute of America.

He was the recipient of numerous awards from scientific, education and civil rights organizations.

Survivors include his wife, Lilyan B. Hawkins of San Marcos; two sons, Philip L., of Los Angeles, and W. Gordon, of San Marcos; a half-brother, David Brown of Washington; and two grandchildren.

WASHINGTON

August 11, 1992

Dear David:

I have just nominated J. Thomas Ratchford for membership in the Council on Foreign Relations and would much appreciate it if you would be good enough to provide a seconding letter on Tom's behalf to:

Mr. Kempton Dunn
Director of Membership and Fellowship Affairs
Council on Foreign Relations, Incorporated
58 East 68th Street
New York, New York 10021

For your convenience, I am enclosing herewith a copy of a recent curriculum vitae that Tom prepared. As you know, the Council's membership group in particular is interested in international experience and the letters are particularly helpful when they contain some personal experience or anecdote that might add to the formal sort of material that usually comes to the committee with the nominating initiative itself.

Tom has done an outstanding job as my Associate Director for Policy and International Affairs and I believe that he would be a very effective and interesting member of the Council on Foreign Relations. Your support would be much appreciated.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

Dear Ray:

I was delighted to get your good letter of Jun 18 and greatly touched by your kind words.

Let me also say that your support of George Bush is much appreciated. We have a lot to do in the Republican Party between now and the election but I am confident that in fact the Bush-Quayle team will, by that time, have convinced the American public that they are the appropriate ones to lead the Nation for the next four years.

You must be extremely pleased with the success that you had with your company and with the elegant science that is being done with Teletrons worldwide.

I have just come back from 10 days in the Middle East having visited Jordan, Israel and Egypt and being the first American to walk across the Allenbee Bridge since 1948 with an Israeli stamp in his passport, I am convinced that even there the possibilities for peace are brighter than they have been at any time since 1948.

Again, my warmest thanks for your letter and good wishes.

THE WHITE HOUSE
WASHINGTON

April 21, 1992

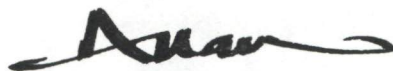

Dear Hellmut:

I enclose herewith the requested evaluation of the qualifications of Professor Doctor Jurg X. Saladin for a Humboldt Award.

I hope that all goes well with you and look forward to our paths crossing in the not too distant future.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

Subject: Scientific Advisor's opinion on Scientists nominated for the Humboldt Research Award

Dear Professor Bromley,

With this letter we kindly ask you for a short confidential statement on

Prof. Dr. Jürg X. Saladin

Please find attached some information concerning the above mentioned candidate. Your statement will be made available to the members of the Selection Committee of the Award Program exclusively as confidential matter. In order to facilitate the procedure of giving your opinion, please find enclosed a reply-slip, which you may use to your convenience.

If you know some of the former Humboldt Research Award Winners in the scientific field of the candidate it would be helpful for us to compare their scientific qualifications with those of the candidate nominated here.

It would be very appreciated, if you could let us have your statement at your earliest convenience, in order that the members of the Selection Committee can be informed of your opinion before the next meeting taking place in the June this year.

Thanking you in advance for your kind assistance, I remain with best regards,

(Dr. Hellmut Hanle)

(i.A. Vera Ueberfeldt)

THE WHITE HOUSE
WASHINGTON

April 15, 1992

Dear Vernon:

This is a belated response to your letter of March 10 concerning LAMPF that was addressed to Will Happer at DOE. Your input is useful and timely and the situation with respect to LAMPF is certainly not closed. Much will depend on what happens in terms of the negotiations between the British Columbian and Federal Governments with respect to the KAON project and, at the moment, there seems to be substantial confusion on that particular front.

I too have been impressed by the active interest that Sig Hecker and Fred Morse have been taking in LAMPF's future and by Peter Barnes' efforts as its new director.

I was very much pleased by the report that I have seen from the DOE Review Committee following its visit to the Wright Laboratory at Yale. The tandem is indeed operating as we had predicted that it would and a strong research program is being build up by Kim Lister and his associates. This is now arguably the finest precision nuclear physics research instrument in the entire world and it would be a great pity indeed if it were not exploited to the fullest.

I look forward to seeing you in connection with the Baryon '92 Conference and, until that time, would send along my warmest best wishes to both you and Miriam.

Sincerely yours,

D. Allan Bromley
The Assistant to the President

Dear Will:

During the period of the Townes Committee meetings last Fall I wrote a letter principally about LAMPF to Peter Paul, Chairman of NSAC, and sent a copy to you.

I was distressed to learn that the President's FY93 budget submission indicates a plan to phase out LAMPF beginning in FY94, and I would like to make a few additional comments to you about LAMPF. I have been at LAMPF several times in the past few months and have had a number of discussions with Peter Barnes (an ex-Yale Ph.D.). I am very impressed with the positive change in spirit at LAMPF since Peter became Director. In my view he is doing an excellent, sensible and conscientious job. He is well-informed, serious and hard-working and emphasizes high quality physics. The documentation LAMPF prepared for the Schiffer NSAC subpanel was strong and reasonable.

I feel that LAMPF has at present a research program with many important experiments covering a very broad range of physics, and in the future there are some possibilities of modest facility extensions which would provide unique and important research opportunities. In particular the Pulsed Lepton Source which could be derived from the Proton Storage Ring would be most significant for muon physics (it could open up the whole field of laser spectroscopy of exotic atoms) and for neutrino physics. The neutron physics program of LANSCE is also an important national resource.

Another very positive recent development at Los Alamos is the much more active interest and involvement in LAMPF's future of Sig Hecker and Fred Morse.

It would be a great loss to physics if LAMPF were shut down in the near future.

With best regards and best wishes,

Vernon W Hughes

February 24, 1992

Dear Anna:

I was delighted to get your letter of January 27 telling me that you were established as a permanent member of the nuclear theory group at Chalk River. I hope that you are enjoying both the work and the area. Are you living in the staff hotel or have you acquired a house or an apartment? If so I would be most interested in knowing where in the town you have settled.

My impression is that the theory group remains an active and high quality one and one where you can expect not only to do good work yourself, but have the pleasure of interacting with highly qualified colleagues.

I am sorry to hear, however, that you and Steve have been separated and that he is remaining in Los Alamos. This clearly is a most unfortunate situation and one that I hope can soon be rectified.

Although I hesitate to even mention the question at this point, is it still true that neither you nor Steve ever did complete publications concerning your Ph.D theses? Is it your intention simply to forget these at this point or are you still planning to produce papers in some form?

Many thanks for your condolences concerning Pat's death. This was a very difficult first year in Washington and unhappily she never had a chance to really experience any of the good aspects of Washington life. Life will never be the same without her.

Please do keep in touch and, in the meantime, let me wish you every success at Chalk River and Steve at Los Alamos. May the separation be a short one.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "Allan", with a stylized flourish at the end.

Jan. 27 1992

Dear Dr. Bromley:

Greetings from Chalk River, a lab that is more than familiar to you! I joined the theoretical physics branch here a couple of months as a staff member, having completed my postdoc at Los Alamos. I know that letters you wrote on my behalf greatly helped me in obtaining this position and I want to thank you sincerely. Securing a permanent position in nuclear theory is very difficult these days, and I consider myself quite lucky.

Steve's career has also been going well lately, and he's been made a staff member in the physics division at Los Alamos. So we're temporarily (we hope!) living apart. Our decision to take jobs at separate labs was a difficult one, but we felt it was important for each of us to pursue the best position we could. Once out of the postdoc track and established as physicists it's considerably easier to persuade one or other of the labs to find an opening. In any case, we're optimistic that things will work out soon.

I was very sorry to hear of poor Mrs. Bromley's death. I had not realised that she was so ill. She must be a great loss to you and the family. My sincere, though belated, sympathies to you.

Let me thank you once again for all you have done to promote my career over the years and for the very sound advice you gave me once, advice I turn to often, namely, 'focus on the essential physics behind the problem'.

Every best wish.

Yours sincerely,

Anna

Dear Paul:

Thank you for your letter of January 31 and for your kind words. As you know, I always appreciate hearing about good people and I thank you for bringing Bill Sibley's name to my attention. Unfortunately, nominations for the May 1998 vacancies have already been submitted to the White House Counsel's office. So, I have forwarded your letter with its recommendation to the National Science Board for its review and consideration for the vacancies that will occur in May 2000.

I have not seen you for a while or else you are here when I'm on the road. Anyway, its been a long time. My best wishes,

Sincerely,

Dear Avi:

It was good to hear from you again after a long gap in our interactions and let me begin by congratulating you on being named Academic Director of the US Physics Olympiad Team.

This far in advance I simply am unable to say whether I will be in town on Friday, May 29 of this year, and would only suggest that you call Ms. Marian Nida, my appointment secretary, at (202) 456-7116 when we get somewhat closer to that date. If at all possible, I would be delighted to meet with you and the members of the Physics Olympiad Team.

With respect to your visa problems, I am not at all sure that I can be any substantial assistance but I shall make the appropriate phone call to the Immigration and Naturalization Service.

Please give my warmest regards to Nitza. I hope that both of you are enjoying life. It does seem like a very long time since she looked after all our computing activities at the Wright Laboratory.

With warmest best wishes,

Sincerely yours,

Dear Professor Bromley

Greetings from the industry! We have a small Yale enclave here, and we all feel very fortunate to have a good employment opportunity in these trying times. I know things have changed for you since the last time we met, but I am hopeful you enjoy your leading role in this administration. If allowed, I would like to mix a personal and "official" requests. The first is a request for advise; this year I had the honour of being named the academic director of the U.S. Physics Olympiad team, after serving as their coach for the last 5 years. Thus, I will be representing the U.S. in Finland in July this year.

Now for the problem, in May this year I will be eligible to become a citizen, and I feel it is also appropriate that I become one in time for the Finland competition. The waiting time for the paperwork is 8 months, and my papers were accepted in December after using my local representative for help (Chris Smith - NJ) by the Immigration and Naturalization service. The INS however, will not process my file out of sequence (District Manager decision). Outside of writing to you, I have run out of possibilities.

The Physics Olympiad training camp will take place this year between 5/23/92 and 5/31/92. I am hoping that the commitment for excellence in education, and the public relation of the 1993 Physics Olympiad that will take place in the States, will enable us to get the amount of support this program deserves. We want the children we chose to have a wonderful experience because they so excel in Physics, but we also would like to show their peers that their excellence is recognized. I would like, therefore to request a meeting for the team with you (best date is Friday 5/29/92), with a photo opportunity at its end.

Best wishes for a healthy 1992.

Yours very truly,

ux

Avi I. Hauser

THE WHITE HOUSE
WASHINGTON

December 20, 1991

Dear Mr. Hobart:

Thank you for your letter of December 11 inviting me to serve as a judge for the American Public Power Association's 1992 Energy Innovator Award program.

As much as I would like to be a part of your program, in my present position it would not be appropriate for me to accept your invitation. * I would, however, hasten to congratulate you on your program that encourages excellence in energy research and development.

I appreciate your thinking of me and wish you every success with your award program.

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

Mr. Larry Hobart
Executive Director
American Public Power Association
2301 M Street, N.W.
Washington, D.C. 20037

* on advice of my
general counsel!

"INVITATION FOR DR. BROMLEY"

TYPE: INVITATION

DOCUMENT NUMBER: 9125108

ORIGINATOR: 02

SPEECH: YES NO

FROM: HOBART, Larry: AMERICAN PUBLIC POWER ASSOCIATION

DATE OF EVENT: 04/15/91

THRU:
TENTATIVE DATES:

12/16/91

LOCATION OF EVENT:

TIME OF EVENT:

SUBJECT: HE IS INVITING DR. BROMLEY TO BE A JUDGE FOR THE
APPA 1992 ENERGY INNOVATOR AWARD PROGRAM.

*Ask Michelle Pearson
to make that
I should do it

*DAB- This is a judgment call, but I would advise you not to
serve as a judge. Your participation could be used as White
House sponsorship/approval of this program, over which we have no
control, & possibly favoritism as to the awardees. You may,
however, wish to send them a letter congratulating them on their
program & encourage excellence in Energy R+D. - Michelle*

THE WHITE HOUSE
WASHINGTON

February 24, 1992

Dear Naomi:

Many thanks for sending me the notice of the symposium that is being organized to honor Georges M. Temmer on his 70th birthday.

I would very much have liked to be able to be present for this occasion but unfortunately I am scheduled for an all day meeting on April 11 and simply will be unable to make it. Georges as a young faculty member at the University of Rochester was a member of my Ph.D oral committee and our paths have crossed very frequently ever since.

It is hard to believe that Georges has reached the exalted status of a 70th birthday but then again my own is not that far in the future.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley
The Assistant to the President
for
Science and Technology

You have something
on your calendar
noted by you...

M

Symposium in Honor of the 70th Birthday of Georges M. Temmer

We are planning a celebration on April 11, 1992 to honor Georges' birthday and retirement after a long and distinguished career. We hope that you will be able to join his many friends, colleagues, and former students.

In the afternoon we will hold a symposium at which students and colleagues will speak. So far, Walter Gibson, Sherman Frankel, and Elliot Kanter have accepted our invitation.

After the formal part of the program, which will be held in the Physics Department Lecture Hall, we will go to the Faculty Dining Hall for cocktails and dinner. Sir Denys Wilkinson has agreed to be the after-dinner speaker.

In order to plan for this occasion we would appreciate knowing now whether you intend to come and whether you would like to contribute to the proceedings. We would appreciate your returning the accompanying questionnaire as soon as possible. A final announcement with details of the activities, as well as maps, will be sent in March.

I hope as many of you as possible will join us for this celebration.

N. Koller
Professor of Physics

Dear Mr. Inamori:

Many thanks for sending me the book entitled **Basic Principles of Japanese External Policy** which I shall find extremely helpful.

I recall with pleasure your visit here to Washington and look forward to our paths crossing again in the not too distant future.

With all best wishes for the new year,

Sincerely yours,

Dear Mr. Imus:

Many thanks for your kind invitation to arrange a visit to the Mercedes-Benz manufacturing facility in Sindelfingen. I shall very much look forward to taking you up on this invitation and to meeting with Professor Weule when next my travels take me to Germany.

I fully recognize the importance of some early warning for Professor Weule and will be in touch with you once my travel plans for my next European trip are in a more developed state.

As a long-time automotive enthusiast, I must congratulate you on the continuing excellence of your engineering and products.

With all best wishes,

Sincerely yours,

Central Intelligence Agency

Washington, D. C. 20505

May 15, 1992

Dr. Bromley;

Before becoming too immersed in my new assignment I wanted to thank you for the wonderful opportunity you provided me over the past two and one half years at OSTP. It was an assignment I will never forget not only for the breadth of the experiences but also the sense that in a small way I, in partnership with the OSTP staff, made a positive contribution to our government's policies during a time marked by rapid and revolutionary change worldwide.

In contemplating the underpinnings of the success OSTP enjoyed working with the CIA I'm brought back to a few statements that you and Michelle made to me during my interview in 1989. You may not recall them but they certainly resonated with me and subsequently became the cornerstone to my approach to the assignment. In short you stated that to be of value to OSTP I must not sever my ties with the CIA but should seek to broaden them and similarly, Michelle encouraged me to widen my interactions beyond OSTP to other EOP offices and S&T agencies. This advice coupled with the access you and the AD's provided me allowed my entrepreneurial spirit to flourish.

In sum I cannot thank you enough for your advice, encouragement, recognition and I think most of all your friendship. A few weeks ago you asked if there is anything more you could do to aid me in the transition back to the CIA. Beyond a short end-of-tour note to the DCI recording your final evaluation of my performance there is little more that I can ask. In fact, your kind words on my performance to Gordon Oehler and others over the years had much to do with the senior management position I've now assumed within the DCI's Nonproliferation Center.

As chief of the group that serves as the principal interface between the Center and the policy community if there's anything I can do to assist you now or in the future please feel free to call upon me at anytime. And, if there are any future opportunities that emerge where I can again be of direct assistance to OSTP or other offices within the EOP please keep me in mind. I'm always interested in new challenges. The best of wishes in all your future endeavors.

Sincerely,

Rick Yannuzzi
