Dr. D. Allan Bromley
The Assistant to the President for
Science and Technology
360 Old Executive Office Building
Washington, D.C. 20500

Dear Dr. Bromley,

The purpose of this letter is to introduce myself to you and to ask for your assistance with a very critical issue facing the State of Nevada.

I have spent the past several years developing a plan whereby the State of Nevada would create an Office of Science and Technology Policy within the executive branch of our state government. I have written several position papers on this topic, two (2) copies of which I have enclosed for your review and comments.

I have just received approval from a special task force formed in Nevada to study this and several other issues facing our state, for example, the proposed Nuclear Waste Repository, the Nevada Test Site and others. These are major problems and/or issues that not only have statewide importance, but are critical to the nation as a whole.

I have been given the difficult task of preparing a proposal for our governor and for the next session of our state legislature a plan to create an Office of Science and Technology Policy within state government.

As background for this, I have been gathering information from many sources including reports from the National Governor's Association and some existing state programs. I would like, as part of my diligence, to meet with you in Washington and discuss this issue. I feel it is critical that any state developed office, such as this, must have a "pipeline" to the Federal level. This would, in my opinion, create the essential networking of state government people who can understand and act on science and technology matters that impact society and influence political decisions at all levels of our government.

I plan to be in the Washington area the week of January 13th and could meet with you at your office on Wednesday, January 15th or late Friday afternoon, the 17th. This meeting would be brief and take less than twenty (20) minutes or so to complete.

702/358-0937
702-358-0956 FAX
1275 Kleppe Lane
Suite 14
Sparks, Nevada 89431

Dr. D. Allan Bromley
December 19, 1991
Page 2.

The specific purpose of this meeting would be to:

- (1) Meet you in person.
- (2) Present my ideas and ask for your thoughts and comments.
- (3) Hear from you about what you have learned as to the optimum structure to have for such an office. That is, how to appoint and/or hire the director or advisor, what is the term of the office, and how to keep it from being totally politicized?
- (4) How to "market" the concept to our Governor and State legislators?

Nevada is a small state, but it is now being asked to address some very large national problems. It is therefore essential, in my opinion, that Nevada create an Office of Science and Technology Policy so it can be properly prepared to address these issues and others that are certain to come along in the future.

Nevada has a unique chance, due to its "smallness", to shape its destiny and diversify its economy through technological innovation.

Thank you for your time and consideration and I do hope to be able to meet with you soon.

Sincerely,

John A. Kleppe, Ph.D
President

OSTP
MAIL ROOM
December 4, 1991

The Honorable
Dr. Allan Bromley
Science Advisor to the President
The White House
Room 358
1600 Pennsylvania Avenue, N.W.
Washington, D.C. 20500

Dear Dr. Bromley,

I would like to take the opportunity of the forthcoming visit to the United States of America of the Austrian Deputy Prime Minister Dr. Erhard Busek, to request you, Dr. Bromley, for a meeting with you between Tuesday, February 4th, in the afternoon and Friday, February 7th, 1992.

The reason why I think such a meeting would be of particular interest for you is that Mr. Busek is undeniably one of the most experienced Austrian politicians, who has, in addition, always shown a marked insight into developments in Central/Eastern Europe.

Indeed, the Media consider him the intellectual forerunner of the "Mitteleuropa" concept, which played such an important role in the assistance to democratic renewal in the formerly communist controlled nations.

Mr. Busek is probably the only European politician who is personally acquainted with almost all of the emerging leaders in those countries. He was their friend already when it really counted.

Let me point out in addition that Mr. Busek also serves as party-leader of the Christian Democrats, one of the two partners in the present coalition government. A government which has and will have to make crucial decisions with regard to Austria's role in the newly emerging Europe.

Regarding your specific meeting with the Vice Chancellor, I would like to mention that Mr. Busek also holds the position of Federal Minister of Science and Research and is therefore vitally interested in issues relevant to both of you.

Austria has over the years gained extensive expertise in numerous long-standing scientific programs with the countries of Central Eastern Europe and might therefore be of particular interest for plans of an increasing american involvement in the region.

I would therefore really appreciate it if you could arrange your schedule accordingly.

Sincerely yours,

Friedrich Hoess

MEMORANDUM FOR D. ALLAN BROMLEY

THRU: J. THOMAS RATCHFORD 
FROM: MICHELE HUGUELET 
SUBJECT: DR. ERHARD BUSEK, AUSTRIAN DEPUTY PRIME
MINISTER

Mr. Friedrich Hoess, the Austrian Ambassador to the United States, has requested an appointment with you for Dr. Erhard Busek, Austrian Deputy Prime Minister. Dr. Busek is visiting the U.S. February 4 through February 7, 1992.

Dr. Busek is well versed on the developments of Central and Eastern Europe. He has played an important role to the formerly Communist controlled nations in the assistance of democratic renewal.

In addition to the position as Deputy Prime Minister, Dr. Busek also serves as the Federal Minister of Science and Research.

If your calendar permits, we recommend that you meet with him.

Dear Allan:

I was delighted to see you in New York at the Council on Foreign Relations on November 13. (Talking rationally about Japan in public is perhaps easier here than in Washington.) Your remarks were splendid and the Q. & A. was very effective.

At a mutually convenient time I hope to see you on several subjects. I won't get into detail now. But the subjects are:

1. The Forthcoming Carnegie Commission Report on "Science and Technology in U.S. International Affairs". Tom Ratchford, Sara Bowden, and others have seen drafts.
2. Critical Technologies. I've thought a great deal about the situation since we talked in depth almost a year ago, and I would like to compare notes on our cumulative reflections. The narrow bureaucratic and political options are less interesting, even if more contentious, than the substantive issues.
3. The Carnegie Commission's Panel on "Long-Range S&T Goals". As you probably know, Guy Stever is chairing a small group (on which I serve) that is struggling with this longstanding set of issues. Frankly, the work you pioneered with the Physics Survey circa 1970-72 is still an extraordinary benchmark on priority-setting. "Our CCSTG problem" is broader than priority-setting within a single discipline, as you well know. With the Congress getting increasingly churned up about this, there ought to be fresh intellectual and institutional thinking.

Just as or more important than any of these, could I be helpful to your agenda?

As always, warmest personal regards.

Sincerely,

Rodney W. Nichols

Dear Allan

One of our younger members of staff, Dr Ania Grobicki, has become increasingly involved in science policy issues and works with the ANC in pursuit of policy formulation in this regard. She has a doctorate from the University of London and works in the field of chemical engineering.

She is going to attend two conferences in the USA in February, namely the National Association for Science, Technology and Society, and the 3rd International Conference on Management of Technology. She is very anxious to meet with you for discussions, either before or after the first of these two conferences. This implies that suitable dates for her would be 3 - 5 February or 10 - 17 February.

Would you be willing to meet with her, and is the time suitable for you?

I trust you are keeping well and wish our paths would cross far more frequently. I gather nuclear physics has been having a tough time in the US with the closure of two facilities?

With kind regards

Yours sincerely

J P F SELLSCHOP
Deputy Vice-Chancellor (Research)

RE: Meeting on November 12, 1991 at 2:00 p.m.

Dear Dr. Bromley:

Thank you so very much for agreeing to meet with a delegation from the Coalition of EPSCoR States on Tuesday, November 12, 1991 at 2:00 p.m. While there is intense interest throughout the Coalition in this meeting, in order to facilitate discussion we have kept the group as small as possible, consistent with giving you a good cross sectional view of our membership.

Attendees will be as follows:

- | | |
|-----------------------------|---|
| 1. H. STEWART VAN SCOYOC | President, Van Scoyoc Associates
Washington Counsel Coalition of
EPSCoR States
DATE OF BIRTH: (b)(6) |
| 2. DR. GENE D'AMOUR | Chairman, Coalition of
EPSCoR States
DATE OF BIRTH: (b)(6) |
| 3. DR. SAMMIE W. COSPER | Commissioner for Higher
Education of the State of
Louisiana
DATE OF BIRTH: (b)(6) |
| 4. DR. ELISABETH ANN ZINSER | President, University of Idaho
DATE OF BIRTH: (b)(6) |

Dr. D. Allan Bromley
November 6, 1991
Page 2

5. DR. MICHAEL P. MALONE	President, Montana State University DATE OF BIRTH: (b)(6)
6. DR. DOUGLAS TREADWAY	Chancellor, North Dakota University System DATE OF BIRTH: (b)(6)
7. DR. DONALD W. ZACHARIAS	President, Mississippi State University DATE OF BIRTH: (b)(6)

Enclosed with this letter is a copy of our "Proposal for a Federal-State Partnership to Stimulate Competitive Research Capacity" which will serve as the focal point for discussion at our meeting. The growth of the EPSCoR budget from \$8 million at one agency when we first met with you two years ago, to, we expect, \$50 million at seven agencies and Departments in FY '92, has created a critical need for coordination of this overall effort at your level. While this is clearly a much smaller program than the other initiatives you have so successfully provided leadership and coordination for, we are extremely hopeful that you will find it possible to make this one of your initiatives for FY '93.

Sincerely,

H. Stewart Van Scoyoc

cc: Mr. J. Thomas Ratchford

November 1991

I tend to favor universities in geographically deprived areas getting into research, even at the expense of efficiency. Again, it is a balance question, but diversity spreads that net wider and, since scientific creativity is still essential and still a rare, fluctuation phenomenon, the increased interest in science across the land must be beneficial. Over and over we have seen our great scientists spring from surprising places.

--Leon Lederman
Science, 4/26/91

Regional and institutional capacity are important concerns in all federal funding, and encouraging new institutional participants and development of research centers strengthens the future capacity and diversity of the research system....While the major research universities are exemplary in their production of research, untapped resources could be developed in other types of educational institutions throughout the United States.

--*Federally Funded Research:
Decisions for a Decade*
Office of Technology Assessment

Summary

The Coalition of EPSCoR States, representing the interests of states participating in the National Science Foundation's Experimental Program to Stimulate Competitive Research, proposes a federal-state partnership to build competitive research capacity and, therefore, to enhance the Nation's research base. The proposed partnership is directly responsive to recommendations made by the Office of Technology Assessment in its recent report, *Federally Funded Research: Decisions for a Decade*. It would involve the 18 NSF-designated EPSCoR states and Puerto Rico and seven federal departments and agencies employing the EPSCoR model to achieve sustainable improvements in the research competitiveness and scientific infrastructures of the participating states. In this proposal, the Coalition specifies the partnership's scope, cost and duration, recommends measures for evaluating success and suggests means of assessing the level of competitiveness of an EPSCoR state relative to specific research agencies.

Recommendations

1. That the President's Science Advisor, as the Director of OSTP, assume leadership of an effort to encourage the major federal research departments and agencies to adopt the EPSCoR model as a strategy for broadening the Nation's research base and strengthening its scientific and engineering infrastructure.
2. That the President's Science Advisor seek to ensure that the EPSCoR programs operated by federal departments and agencies are appropriately coordinated and, in accordance with the EPSCoR model, use planning and implementation grants to strengthen the scientific and research infrastructures of the 18 designated EPSCoR states and Puerto Rico, increase their research competitiveness and enhance human resource development in science and engineering with special attention to women and minorities.
3. That the President's Science Advisor actively support a phased program to attain long-term EPSCoR goals by increasing the overall federal investment in EPSCoR to a level of \$150 million by FY 1995.

Background

In 1988, institutions from states participating in the National Science Foundation's Experimental Program to Stimulate Competitive Research organized the Coalition of EPSCoR States to help represent their research-related interests. Since its formation, the Coalition has supported a strong EPSCoR at NSF and has advocated that other federal departments and agencies engaged in the support of scientific research implement their own EPSCoR programs, using the NSF model.

The Coalition's efforts have been well received. Several Congressional committees have acted to initiate EPSCoR within agencies under their jurisdictions. However, the implementation of EPSCoR programs in specific departments and agencies has varied considerably, and the Coalition believes leadership at the national level is required to form these emerging programs into a coherent and coordinated federal-state partnership to stimulate competitive research capacity in the EPSCoR states.

Rationale for Partnership

Currently, federal research and development support is largely concentrated in a few institutions located in a few states of the Nation. In response, NSF developed EPSCoR in an effort to reduce the extent of this concentration by strengthening the research competitiveness and scientific infrastructures of states receiving smaller amounts of federal research support. Such an effort is clearly in the larger national interest and should contribute to the following outcomes:

- A stronger scientific and technological base, nationally and regionally;
- Broader geographic participation in the development of technologically sophisticated business and industries and a more competitive national economy;
- Strengthening of science education and expansion of scientific and engineering training opportunities, particularly for minorities and women;

- Creation of a national political consensus at both federal and state levels on the importance of providing support for the development of science and technology;
- Increased understanding of the role of scientific merit in the distribution of federal research support.

The NSF-designated EPSCoR states all receive much smaller amounts of total federal R&D support going to universities than do the top five states. As a group, the 18 states and Puerto Rico, which have 16% of the U.S. population, receive about 6% of such support, in comparison to the 44% received by universities in the top five states, which have 27% of the population. In competitively obligated R&D funds, the EPSCoR states typically fall more than 50% below the per capita average of the majority of the primary federal research agencies--NSF, DOD, NASA, DOE, EPA, USDA, and NIH.

These states also receive a very small share of the support that the federal government provides to sustain and improve the Nation's scientific and research infrastructure. Such support, which also goes primarily to universities in the top five states includes indirect cost reimbursement, graduate student assistance and faculty salary support. For example, a recent announcement of NSF graduate fellowships included only nine students out of 950 (less than 1%) who will be attending a university in an EPSCoR state.

In addition, most EPSCoR states lag behind--some far behind--in many measures of social, economic and educational status such as having high poverty and unemployment rates. However, despite their limited resources, as a group they invest more than twice the national percentage of their own tax dollars on university research and development.

In developing EPSCoR, NSF recognized that the current concentration of research calls for an expanded federal investment specifically directed to the development of a more broadly-based national research capacity. This recognition is echoed in the recently released report of the Office of Technology Assessment (OTA) examining how the federal government supports research. The findings and conclusions of this report, *Federally Funded Research: Decisions for a Decade*, provide clear support for the Coalition's proposal.

OTA concludes that "although scientific merit and mission relevance must always be the chief criteria used to judge a research area or agency program's potential worth, they cannot always be the sole criteria." In this context, it proposes two additional criteria--strengthening educational and human resources and building

regional and institutional capacity. The focus of this proposal is capacity building, which the OTA report states will expand "the capability of the federal research system," and, in this context, the OTA report calls for "state, local and private participation in the support of the research infrastructure"--a key component of the EPSCoR model.

The success of the NSF EPSCoR program, which has already fostered breakthroughs in areas such as high temperature super conductivity and paleontology, is evidence that the involvement of additional agencies and departments in this effort would be an effective way to proceed.

Partnership Goals

The primary goal of the proposed partnership would be to build research capacity within eligible states by achieving permanent improvements in the ability of participating universities to compete more effectively for federal research funds. Success in achieving this goal would be evidenced by a significant and sustained increase in the per capita average of such funding going to these states.

Achieving this goal will also help improve the quality of graduate-level S&E training and undergraduate science education. Since many EPSCoR states have proportionately high minority population levels, science opportunities would be greatly expanded for such students. Further, state EPSCoR committees can function to support science-related efforts by state government, state and local school boards, undergraduate institutions, business and industry.

Partnership Participants

State Participants: The states whose institutions would be eligible as active members in the partnership should be the 18 states and Puerto Rico that NSF has designated as eligible for EPSCoR. These are the states that have implemented, or are in the process of implementing, the EPSCoR model; as a result, they have in place the required statewide involvement, interinstitutional cooperation and state organization for planning, coordination and evaluation.

Federal Participants: In addition to NSF, the Coalition recommends that the Departments of Energy, Agriculture and Defense, along with the National Institutes of Health, the Environmental Protection Agency, and the National Aeronautics and Space Administration, comprise the federal component of the partnership. Each currently has some type of EPSCoR-related activity underway or under consideration. Additional departments and agencies might become involved at a later date.

The NSF EPSCoR Model

As developed by NSF, EPSCoR is a federal strategy for working in concert with designated states to improve the competitive research capacity of their universities. An officially constituted EPSCoR committee, with broad representation from participating universities, state government and the private sector, is provided support to systematically develop a multi-year state-wide plan to enhance research competitiveness in specific fields and to improve the states' scientific and research infrastructure. This planning process, which requires active collaboration between university faculty and agency staff, results in a first phase, three to five-year implementation proposal involving a variety of research capacity building projects and general enhancement activities. This proposal, submitted to NSF for competitive review, must be leveraged by significant state and institutional cost sharing. During the implementation phase, the committee has the responsibility for coordinating the improvement activities and evaluating program effectiveness. Under the Advanced Development Program, NSF solicits a second phase proposal to develop strong groups or centers in highly targeted research and training areas.

Implementing the Partnership

The previously cited OTA report points to the need for "more explicit priority setting" during a period of scarce resources, but notes that there is "currently no mechanism for evaluating the total research portfolio of the federal government in terms of progress towards many national objectives" and concludes that "research priorities must be considered across the federal research system, and in particular, across the federal agencies." In this spirit, the Coalition is requesting that the President's Science Advisor provide the leadership necessary at the federal level to bring the mission-oriented agencies and departments into the proposed partnership. In the Coalition's view, a consistent, defined program jointly supported by the Administration and the responsible committees of the Congress would lead to the greatest return on the overall investment of federal, state and institutional resources. This requires that the participating agencies embrace the EPSCoR concept, allocate funds for EPSCoR activities in their budget requests and support these requests in their presentations to the Congress.

The Coalition recommends that each agency's EPSCoR program be implemented through the respective state committees in accordance with the EPSCoR model described above. Accordingly, an agency or department would award a one-year planning grant to the state EPSCoR committee for the purpose of developing its three-five year implementation plan to build upon areas of research strengths related to the agency's mission and to enhance the supporting research infrastructure. The committee would then submit this plan to the agency for competitive merit review.

While not all EPSCoR states are among the lowest states in every federal agency, the EPSCoR Coalition recommends that all states be included in the planning grant phase and at least the first phase of implementation grants. While a few research programs in the EPSCoR states are already competitive in some areas, in such instances, a state EPSCoR committee can develop plans to continue to build a strong, state-wide base in these research areas.

Evaluating the Partnership

The Coalition understands that the purpose of EPSCoR is to serve as a catalyst to move these states forward during a transition period toward a more effective and competitive research capability that is sustained by an enhanced scientific infrastructure. Thus, it is appropriate that, at the end of the initial five-year term of the proposed partnership, each participating agency assess the progress of each state toward this goal. In making this assessment, a variety of indicators are relevant such as per capita increases in science and engineering faculty publications and citations, undergraduate and graduate student enrollment, particularly among women and minorities, patents, number and size of federal awards and memberships in the National Academy of Science/National Academy of Engineering.

Given the goal of EPSCoR, a primary focus of such an assessment should be on competitively awarded research support for academic science and engineering. As a general guide, the Coalition recommends that each agency compare the per capita amounts of competitive federal support going to the respective EPSCoR states to its per capita national average. Evidence that a state has been able to maintain over a three-year period a per capita federal support level that is 75% of the national average in relation to a particular agency would be an indication that it may have achieved its EPSCoR goals for that agency.

Projected Cost of Partnership

The overall per capita average of federal R&D funds in EPSCoR states is approximately 40% of the national average. It is the ten-year goal of the EPSCoR Coalition to double constant dollar federal funding to eligible EPSCoR states and, by so doing, to achieve a per capita federal funding level in the majority of these states that is 75% of the national average. The table below presents the Coalition's recommendations for the overall federal investment by seven departments and agencies needed for the first five-years of a program aimed at attaining this goal.

PROPOSED FEDERAL INVESTMENT IN EPSCoR

	FY 91	FY 92	FY 93	FY 94	FY 95
DOE	4.0	5.0	15.0	18.0	20.0
NIH	0.0	2.0	15.0	16.0	25.0
EPA	1.0	0.0	5.0	10.0	10.0
NSF	11.0	19.0	25.0	30.0	35.0
USDA	7.0	11.0	12.0	13.0	15.0
DOD	7.0	10.0	12.0	15.0	25.0
NASA	2.5	3.0	14.0	15.0	20.0
TOTAL	32.5	50.0	98.0	117.0	150.0

The overall amounts proposed for each fiscal year represent the Coalition's considered judgement regarding the amount of federal support needed to generate a critical mass within each state of broad-based research and science improvement programs. The amounts proposed for specific agencies were determined in part by Congressional actions already taken in FY 1991-92 and in part by the relative size and scope of their respective research programs. In instances such as NIH, USDA and DOD, the Coalition took into account factors such as clinically oriented research and training, national labs and formula-based research support.

Conclusion

It is in the national interest for the federal government to make an explicit effort to enhance research excellence more broadly throughout the nation. This proposal is directly responsive to that national interest, and the Coalition urges the President's Science Advisor to support its implementation.

The strengthened scientific infrastructure and research base which will result will help to ensure major positive contributions from all EPSCoR states to the issues of national competitiveness and of human resource development in science and technology for the decades ahead. Every state must be given the opportunity to make a meaningful contribution to these efforts. Support of the proposed enhanced EPSCoR program will provide the catalyst to assist these less-competitive states in helping themselves and, as a consequence, the Nation.

Dear Allan:

I am writing to you in my capacity as a member of the Board of the Exploratorium, the innovative science museum in San Francisco. Dr. Goéry Delacôte has recently been appointed the Executive Director of that institution and he asked me to write to you to inquire whether you would be willing to give him an appointment when he is in Washington on November 25, 26 or 27.

The Exploratorium has played a vital role in San Francisco in linking science to education. In addition to exposing people of all ages through direct "hands on" museum visits the Exploratorium has been most effective in giving informative tours to science teachers, which in turn prepare those teachers for guiding their classes through the Exploratorium. Delacôte has had many innovative ideas to enhance the impact of the Exploratorium on national science education. He would like to use the Exploratorium and its unique related community to develop a national organization as a leader in the battle to improve science and math education. He would like to take the initiative in launching something akin to the Nobel Prize for science educators worldwide.

I would appreciate if you could agree to meet with Dr. Delacôte; I will phone your office in about a week.

With best personal regards,

Wolfgang K. H. Panofsky

Dear Allan:

I would appreciate the privilege of an audience, along with John Ong, the Chief Executive Officer of the Goodrich Company, some time on the afternoon of December 11 in your office.

John and I would like to have the privilege of explaining briefly to you the substantive program associated with the institution of Inventure Place. It is both a significant new facility that is in the process of development in Akron, Ohio and a program associated with the stimulation of invention from our industrial and scientific society.

John is one of the organizers and I am pleased to be an associate of his in what I think can be a very useful program and inspiration in the development of intellectual property.

As you well know the only right granted in our original constitution was that ascribed to the Congress to promote the development of science and the useful arts to the authors and the inventors. Now America will have an institution whose focus will be on this.

We'd like to have you know about it and believe that you will find that an occasional interfacing with Inventure Place will be both sound citizenship and good politics.

May we see you for a few minutes and bring you aboard of this progressive effort on the part of the private sector.

Best wishes,

Robert W. Galvin

Dear Dr. Bromley:

On behalf of the university presidents of the states participating in the EPSCoR program, I would like to request a meeting with you for the purpose of discussing topics related to the EPSCoR program. I would also like to have Dr. Ratchford join us if at all possible.

Since our last meeting, this program has grown significantly at NSF and at several other agencies and departments. We would like to review that progress with you, discuss several issues of coordination and present a proposed five-year budget, as requested by Dr. Ratchford at our last meeting.

A number of presidents will be available in Washington for such a meeting on November 12 in the late morning or early afternoon. As you may know, the annual meeting of the National Association of State Universities and Land-Grant Colleges will be underway at that time and, should you be available, we expect a large turn out of presidents whose institutions are participating in EPSCoR.

Your continued support for this effort is greatly appreciated and we hope you will be able to meet with us on November 12th.

Sincerely,

H. Stewart Van Scoyoc

SUBJECT: Possible Meeting with Dr. Bromley

DATE: September 11, 1991

I would welcome a meeting with you, or a designated official, to discuss the following issues:

1. Explore options to establish a more systematic identification of American scientists as candidates for the Kyoto Prize.
2. Possible reconsideration of organizing White House letter commending the 1991 American Kyoto Prize Laureates.
3. Addressing the concerns that you or others may have regarding Kyoto Prize, procedures, etc.

A twenty to thirty minute meeting is requested.

Since you are extremely busy, we will, of course, accommodate your schedule.

If there is an interest and time in your schedule, I would also welcome your views of recent Defense Science Board (DSB) studies dealing with "Critical Technologies" and "S&T" funding. I have had the pleasure of participating in most of these recent DSB studies.

Thank you and best regards.

Kennecott

The Honorable D. Allan Bromley
Assistant to the President for
Science & Technology
Room 358
Old Executive Office Building
Washington, D.C. 20500

*Have Gene
see him.*

Dear Dr. Bromley:

Kennecott is facing a potential EPA Superfund policy issue that could jeopardize plans for major modernization and expansion of our facilities which are being considered. The potential economic investment could approach \$1 billion, and would directly impact the long-term viability of Kennecott as a major copper producer and employer in the state of Utah.

The competitiveness of the domestic copper industry and its ability to continue to supply the industrial needs of the United States could also be impacted, as Kennecott accounts for 15 percent of domestic copper production.

With the above in mind, I would like to meet with you in Washington, D.C. on September 19, or at some other mutually convenient time.

Your attention to this urgent matter is most appreciated.

Best regards,

Frank Joklik

Allan Bromley, Ph.D.
Assistant to the President for
Science and Technology
Office of Science and Technology Policy
Old Executive Office Building
17th Street & Pennsylvania Ave., N.W.
Washington, D.C. 20506

Dear Dr. Bromley:

Alan

I am pleased to advise you of the appointment of James E. Sarn, M.D., M.P.H. to the position of Deputy Assistant Secretary for International Health within the Office of the Assistant Secretary for Health. As such, Dr. Sarn heads the Offices of International and Refugee Health. The appointment of Dr. Sarn is part of our ongoing efforts to strengthen international health cooperation by the agencies of the Public Health Service.

Dr. Sarn has had extensive international health experience as a public health advisor and administrator of health assistance programs in Latin America and Africa. He has come to the Department from the Agency for International Development through an interagency agreement between Secretary Sullivan and Administrator Roskens. He most recently served 4 years as Director, Health and Nutrition Office, Cairo, Egypt -- AID's largest single-country health program. Dr. Sarn also served 6 years with the Arizona Department of Health, including 3 years as Director.

As Deputy Assistant Secretary for International Health, Dr. Sarn has primary responsibility within the Public Health Service for leadership, policy and program coordination of international health matters.

In light of the ongoing interactions between your Office and the Public Health Service on international matters, I have encouraged Dr. Sarn to meet with you at your earliest convenience to strengthen areas of mutual collaboration.

Sincerely yours,

[Signature]
James O. Mason, M.D., Dr.P.H.
Assistant Secretary for Health

*Jim Sarn has already met with D.A.
You might say hello if time permits.
He is a wonderful guy.*

Direct line: (020) 5862589

Amsterdam, August 28th, 1991.

Dear Professor Bromley,

As you already learned from Professor Kai Siegbahn in his letter to you of August 15th, I am scheduled to visit Washington on September 20th until the early afternoon of September 25th and I would be extremely honoured if I could meet with you or your associates to discuss nuclear instruments and methods as well as related science policy/publication matters.

As I am attending a Symposium of the National Academy of Science, my days are fairly free to visit your office. Would you be so kind as to inform me by fax if a meeting can be arranged so that I can schedule my other appointments. In case this letter arrives at your office after September 9th, please forward the information to Professor David Shirley in Berkeley (fax 415 486 4299, tel. 415 486 4000), who is my trip coordinator for the first part of my journey. In Washington I will be staying at the Holiday Inn Crowne Plaza Hotel, 775 12th Street, N.W. Washington.

Looking forward to your reply.

Sincerely yours,

Dr. Joost Kircz

Dear Alan,

I know that you are very busy nowadays but I still approach you with a question of some importance for our journal Nuclear Instruments and Methods, where you served as a member of the editorial board for a long period of time. There has recently been a change in the staff at Elsevier and a new administrative head of NIM A at the publishing house in Amsterdam has been appointed, Dr. Joost Kircz. In order to establish some personal contacts with several scientists in the USA he is planning a trip to the USA, September 9-29. He will during this trip stay in Washington September 20-24. Since we know each other so well I have suggested to him that he may try to make a very brief visit to you. If you can spare some minutes for him you would do me and the journal a great favour. If you are unable because of some other urgent commitments please forward him to some of your near collaborators. The journal is going extremely well and we hope of course that it will remain to serve the nuclear community equally well in the future!

I enclose the travel schedule of Dr. Kircz in case you or some of your collaborators find that it would be beneficial for him and the journal to visit some other colleagues at the various places.

With my best regards,

Sincerely yours,

Kai Siegbahn

Honorable D. Allan Bromley
Assistant to the President
for Science and Technology
Old Executive Office Building
17th & Pennsylvania NW
Washington, D.C. 20506

Dear Allan:

Except for a few minutes at the EC reception of Vice President Pandolfi last February, there has been little opportunity for us to meet. You have an impossible schedule, and I am not getting to Washington very frequently this year.

There are now several activities of our Center for Science and Technology Policy and of myself that should be of benefit to you and for which your comments will be of great value to us. I would therefore like to visit with you sometime in the near future to go over these items.

Much of our program will be of interest, but I want to discuss with you four items in particular:

1. Study of Multinational Corporate Laboratories.

We are engaged in the early phases of a major study of multinational corporate laboratories -- their scope, linkages formed within host countries, the nature and direction of technology flow, the networks they generate, and so on. We have some preliminary data on Japanese subsidiaries in the U.S. and on some general characteristics of multinational laboratories (e.g., foreign laboratories of Japanese companies tend to be part of the corporate central R&D, those of U.S. companies tend to report to business units).

2. International Conference on "Effective Use of Global Technical Resources" -- 23-25 June 1992.

This will be our Sixth International Conference and will be held at Stresa on Lake Maggiore, Italy. Principal funding will be from the EC. The intent is to explore mechanisms by which governments and corporations of the developed industrialized nations can interact with technical resources of other countries, particularly non-OECD countries such as Eastern Europe, Third World nations, Latin America, and so on.

3. Visit to Japan -- November 1991.

I have accepted an invitation to spend a week in Japan under a "Distinguished Visitors Program" initiated by their Policy Studies Group, something similar to our Foreign Policy Association. I believe Dale Corson has been involved similarly. They will set up individual meetings with high-level people in government, political parties, the business community, and academia.

If my discussions can be helpful for you, that would be fine. There may be points in my own presentations that you feel should be stressed. It would be constructive to have a brief talk with you about this.

4. Book on "Industrial Research"

I have committed myself to this project, assisted by a grant from the Sloan Foundation. An important part of the content will be the impact of government policy, interactions between government and industry programs, and the optimum role of government. I would appreciate the opportunity to exchange some thoughts with you.

Your inputs on these items will be valuable to us and I believe much of our activity can contribute to the work of CSTP. I will call your office and see if there is an opportunity to get together in mid-September or October. When I come to Washington, I usually stay at the Watergate, and would be delighted to have you join me for breakfast if your schedule allows.

Hope to see you soon. Best regards.

Sincerely,

Herbert I. Fushfeld

Dear Dr. Bromley:

I write on behalf of Governor Celeste to request an appointment with you. The Governor is considering acceptance of the chairmanship of the Government-University-Industry Research Roundtable and would like to discuss with you your expectations for the Roundtable and how he as a chairman could best lead the Roundtable in productive directions.

A 30 minute appointment would provide sufficient time for this discussion. You may wish to include members of your staff in the meeting, particularly William Phillips who serves as your associate on the Roundtable Council. The Governor will be unaccompanied.

Please let me know what dates you have available for the meeting. I hope we can arrange something as early as possible in September.

Thank you for your consideration of this matter.

Sincerely,

Don I. Phillips

OFFICE OF THE
DIRECTOR

Dr. Allan Bromley
Assistant to the President for Science and Technology
Office of the President
725 17th Street, N.W.
Washington, D.C. 20506

Dear Dr. Bromley;

Over the past two years, Boston University School of Law and its Center for Law and Technology have held seven national symposia on various legal, ethical and policy issues raised by advances in biotechnology. These symposia, sponsored by the Alfred P. Sloan Foundation, have sought to illuminate the diverse perspectives and concerns held by different societal sectors, and to formulate policy options for appropriate resolution of the critical issues.

Our eighth symposium will address Gene Therapy and Human Reproduction. It is scheduled for Friday, September 20, 1991 at Barrister's Hall, Boston University School of Law, 765 Commonwealth Ave., Boston. The topics and speakers are designated in the agenda for the meeting on the following page.

Professor Avi Soifer of the Law School and I will co-chair the symposium. Each speaker will discuss the designated topic, followed by cross-discussion with other speakers and the audience.

I am writing to invite you to join us at this meeting as a member of a select interdisciplinary group drawn from academia, industry, government, and the biotech research and professional communities. The meeting will begin with registration and the distribution of materials at 8:30 A.M. followed by our first speaker's presentation at 9:00. We plan to conclude the meeting at 1 P.M. However, audience participation and the informal nature of the meeting may justify extending the meeting for further discussion (after a brief break for lunch at nearby restaurants or school cafeterias).

We hope you will be able to attend and participate, and request that you respond yes/no by returning the attached form by September 10. We look forward to the opportunity to discuss a cluster of very important issues with you.

Yours truly,

M.B.

Professor Michael Baram

Center for Law and Technology

GENE THERAPY & HUMAN REPRODUCTION

Symposium Agenda September 20, 1991

Registration: 8:30 A.M., Barristers Hall, BU Law School,
765 Commonwealth Ave., Boston, MA 02215

1. Introduction and Overview

Professor Michael Baram
Director, Center for Law and Technology
B.U. School of Law
(to discuss purpose of the meeting, overview of issues)

2. Gene Therapy: Current Status and Future Prospects for Reproductive Health

Professor Aubrey Milunsky
Director, Human Genetics Center
B.U. School of Medicine
(to discuss current status, future applications, medical rationales and professional responsibilities, re somatic and potential germ line)

3. Human Genome Research: Relevance to Gene Therapy and Reproductive Health

Dean Charles DeLisi
B.U. School of Engineering (former Director of Health & Environmental Research, U.S. DoE)
(to discuss Genome program, potential findings and their influence on moving gene therapy from research to experimentation).

4. Constitutional and Policy Implications of Gene Therapy

Professor Avi Soifer
B.U. School of Law
(to discuss constitutional law and public policy considerations applicable to potential government support or mandates for use of gene therapy to promote reproductive health, and relevant history).

5. Moral Obligations in the Use of Gene Therapy for Reproductive Health

Professor George Annas, Uteley Professor of Health Law,
B.U. School of Public Health
(to discuss ethics, values, moral considerations applicable to MD - patient, patient-offspring relationships).

6. Parental Responsibilities and Legal Obligations

Professor Leonard Glantz
B.U. School of Public Health
(to discuss common law doctrines applicable to parental decisions, including recent litigation on parental tort liability for birth defects).

7. Concluding Remarks

Professors Avi Soifer and Michael Baram
B.U. School of Law
(summing up of major issues, views presented, future needs).

Co-Chairmen Professor Michael Baram and Avi Soifer
Boston University Law School

Dear Dr. Bromley:

As a follow-up to our initial meeting of June 18th, representatives of the National Association of Counties Research and Technology Focus Group would like to request a meeting with you to present the Association's proposal on technology transfer to local governments which you asked us to prepare.

We have given a great deal of thought and consideration to your challenge to us to identify a limited number of areas of focus, in which we would do a needs assessment of the problems, and then identify jurisdictions where pilot technology transfer projects or programs could be tested.

We are prepared to address these objectives and would like to meet with you to make our presentation in the second or third week in September. The dates most convenient to us would be September 10, 11, or 12.

It will be necessary for us to notify other members of the Focus Group who will participate in the meeting so an early response would be most appreciated.

Thank you for your consideration of our request and I look forward to your reply.

Sincerely,

Kathleen (Kaye) Braaten

OFFICE OF THE
DIRECTOR

The Honorable Allen Bromley
Assistant to the President
for Science and Technology
The White House
Washington, D.C. 20500

Dear Dr. Bromley:

Twice a year for the last ten years, the American Business Conference has been bringing together its members -- one hundred CEOs of the fastest growing midsize American companies -- with leading public policymakers such as yourself. Our next meeting will be in Washington on September 30 through October 2 of this year. We want to invite you to participate in that meeting which we believe will be the most significant in our history.

For the first time, we intend to dedicate an ABC meeting solely to the implications of economic globalization for American public policy and American economic competitiveness. To that end, we are inviting leading American policymakers, media figures, and chief executives of outstanding Japanese and European corporations. Our aim is to discover ways in which this country's most successful midsize businesses can better take advantage of new opportunities around the world in order to grow and to promote a better standard of living for all of our citizens.

We do not think this is a meeting you can afford to miss. Our members want very much to have the benefit of your views on the critical geopolitical economic and cultural issues raised by the new global marketplace. I would like to invite you to join a small group of our chief executives for a roundtable policy discussion on science and technology and American competitiveness at lunch at noon on Tuesday, October 1. The lunch will be held at the Willard Inter-Continental Hotel (1401 Pennsylvania Avenue, NW) and will last one hour.

We hope you will be able to join us on October 1. If you have any questions, please call Fran Frazier on (202) 822-9300.

Sincerely,

James R. Jones

James R. Jones

PROFESSOR ALLEN BROMLEY,
ASSISTANT TO THE PRESIDENT
FOR SCIENCE AND TECHNOLOGY

CUR REF: 015

DATE: 6.06.91

THE WHITE HOUSE,
1600 PENNSYLVANIA AVE, NW,
WASHINGTON, D.C. 20500,
U.S.A.

DEAR PROFESSOR BROMLEY,

WE HAVE LEARNED FROM PROF. J.H. HUBBELL THAT YOU ARE INTERESTED
IN THE PERSONALITY AND SCIENTIFIC WORK OF THE LATE P.A. CHERENKOV,
ACADEMICIAN AND NOBEL PRIZE WINNER, AND THE SCIENTIFIC APPLICATION
OF THE CHERENKOV RADIATION.

WE HAVE PLEASURE IN INFORMING YOU THAT FROM 19TH TO 23RD AUGUST,
THIS YEAR IN MOSCOW THERE WILL BE HELD THE FIRST INTERNATIONAL
SYMPOSIUM " CHERENKOV DETECTORS " IN MEMORY OF P.A. CHERENKOV. THE
SYMPOSIUM IS ORGANISED BY THE USSR ACADEMY OF SCIENCES AND THE
LEBEDEV PHYSICAL INSTITUTE.

WE SHOULD BE HAPPY IF YOU COULD POSSIBLY TAKE PART IN THE SYMPOSIUM.

BEST WISHES.

YOURS TRULY

PROFESSOR EVGENY TAMM

CHAIRMAN OF THE ORGANIZING COMMITTEE.

OUR ADDRESS:

THE WHITE HOUSE
WASHINGTON

June 13, 1991

Dear Professor Tamm:

Thank you for your recent letter informing me about the First International Symposium "Cherenkov Detectors" to be held on August 19-23, 1991, in Moscow.

I am, indeed, very interested in Cherenkov radiation and the scientific theories of Dr. Cherenkov. However, as much as I would have liked to join you, I will not be available during those dates in August.

Thank you for thinking of me and let me offer my best wishes for your meeting.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D. Allan" and the last name "Bromley" clearly distinguishable.

Strasbourg, July 24, 1991

Le Président

Dear Professor Bromley,

I thank you for your very substantial and friendly letter of July 9.

As you may imagine, I have read with interest your comment on the Human Frontier Science Program, the future of which has been a cause of concern to me over the last few months. As you note yourself no one questions the high scientific quality of the Program and I think it would be a pity for science if, for financial and political reasons of various sorts, it were not to be prolonged. I am cheered up by your letter. I have also noted the confidentiality of the information and will treat it as such, but at the same time I am looking forward to some kind of official announcement.

I have also noted that you are trying to make it possible for you to attend the Dr Honoris Causa ceremony to take place on December 6 (I will make sure you get the programme as soon as it is finalized). It would be an honour for the University Louis Pasteur and a pleasure for me and other colleagues to welcome you again in Strasbourg on this occasion. I would be delighted to have a chance to discuss with your recent developments at ULP of a general as of an international nature.

With my very best wishes,

Gilbert LAUSTRIAT

THE WHITE HOUSE
WASHINGTON

September 20, 1991

PERSONAL AND CONFIDENTIAL

Dear President Laustriat:

My apologies for the delay in responding to your note of July 24 which arrived when I was on vacation.

I am still looking forward to being present for the ceremony that you planned on December 6 and the symposium on the preceding day about which I had an opportunity to talk with Andre Gallmann and Walter Greiner during a very brief stop in Frankfurt early in August.

With respect to the Human Frontier Science Program, I am happy to be able to say that major progress has been made and I shall be presenting the results to my Japanese colleagues in mid-October when I shall be visiting Tokyo as the Chairman of the American side of the US/Japan Joint Commission. Until such time, this information must remain confidential but I am confident that both you and the Japanese will be pleased with the results.

With warmest best wishes,

Sincerely yours,

D. Allan Bromley

THE WHITE HOUSE
WASHINGTON

August 2, 1991

Dear Dr. Soberón:

Thank you for your letter of invitation to the September 19-20 "Seminar on Science and Technology and the Free Trade Agreement." Such a seminar is indeed timely and important, particularly given the unique nature of science and technology in trade and economic relations. A thorough discussion of all of the issues mentioned in your invitation, as well as others, deserve our immediate attention.

Unfortunately, I am otherwise engaged at the time of your meeting. However, recognizing the significance of such a seminar, I have asked Dr. J. Thomas Ratchford, Associate Director for Policy and International Affairs, to attend in my place. I believe you know Dr. Ratchford, and have visited him in Washington earlier this year. He is well versed, not only on international science and technology issues, but also matters relating to a free trade agreement between the United States and Mexico.

I am pleased to hear that plans are well underway for the meeting of Western Hemisphere Science Advisors. While I will not be able to attend the early part of the meeting, I do look forward to arriving late on November 15 and participating all day on the 16th. I look forward to seeing you then.

Sincerely,

D. Allan Bromley
The Assistant to the President

91 JUL 24 P 3: 46

OFFICE OF THE
DIRECTOR

México, D.F., a 22 de julio de 1991.

DR. ALLAN BROMLEY

Assistant to the President for Science and Technology,
and Director, Office of Science and Technology Policy
Washington, D.C.
USA

Dear Dr. Bromley:

In the context of economic globalization in which nations are evermore conducting efforts to eradicate obstacles that hinder their political, economical, scientific, and cultural relations, Mexico is engaged in systematic actions in order to achieve a Free Trade Agreement (FTA) with Canada and the United States.

The trade between the nations included in a FTA, can demonstrate the ability of a country to generate and assimilate technology, which in turn may reflect its scientific and technological infrastructure.

Thus, Mexican science and technology acquire special significance because they help to identify development risks and opportunities which may enable Mexico to have a competitive capacity in the world market, in general, and with Canada and the United States in particular.

In this regard, the Consejo Consultivo de Ciencias, CCC, (Science Advisory Council) to the Presidency of Mexico and the Secretaría de Comercio y Fomento Industrial, SECOFI, (Secretariat of Trade and Industrial Promotion), have organized an "International Seminar on Science and Technology and the Free Trade Agreement". The purpose of this Seminar is to analyze the significance of Science and Technology in the exchange that a treaty of this nature implies, as well as to collect the opinions of a select group of experts, in an endeavor to present recommendations favoring scientific and technological development around the joint effort.

PRESIDENCIA DE LA REPUBLICA

CONSEJO CONSULTIVO
DE CIENCIAS

The Seminar will include the participation of government representatives of Mexico, the private sector, and the national scientific community, in addition to invitees from Canada, Israel, the United States, Spain, and Portugal.

In this regard, it is my pleasure to extend you an invitation to participate in the "Seminar on Science and Technology and the Free Trade Agreement" which will take place on the 19th and 20th of September, 1991, in Mexico City. We are very interested in discussing some special issues, like public policies for the development of precompetitive technologies, scientific and technological human resources mobility, entrepreneurs international cooperation, and intellectual property.

The organizers will cover your transportation, room, and board expenses during your stay in Mexico.

I am certain that your participation in this matter, will constitute a valuable element in the accomplishment of the Seminar objectives.

While waiting for your reply, receive my best regards.

Cordially yours,
THE COORDINATOR GENERAL

GUILLERMO SOBERON, M.D.Ph.D

MEMORANDUM FOR D. ALLAN BROMLEY

FROM: TOM RATCHFORD
SUBJECT: MEXICO TRIPS

Following our conversation and exchange of notes (attached), I have told Bill Golden that you plan to participate in the meeting of Western Hemisphere Science Advisors. The meeting, hosted by Soberón and supported by Carnegie, is set for November 14-16 at a location on the Pacific Coast of Mexico (Bill will send details; he says direct flights from the U.S. are available).

You would be expected to be there Saturday, November 16, leaving here after the PCAST meeting on Friday. Presumably you would return on Sunday, November 17.

You also asked that I participate in the September 19-20, 1991 "Seminar on Science and Technology and the Free Trade Agreement" in Mexico City, also convened by Soberón (letter attached). I'll be happy to do so. Shall I draft a letter from you to Soberón confirming this?

"yes"
per DAB

From: Christie Van Kehrberg
Re: Meeting in Mexico of western hemisphere science advisers

Attached are copies of Mr. Golden's letter of July 25 to Dra. Graciela Rodriguez and of Dr. Soberon's fax of July 15 listing the representatives.

We've got our fingers crossed, waiting for confirmation from Dr. Ratchford that, if the dates of the meeting are changed from November 13-15 to November 14-16, Dr. Bromley will be able to attend the meeting in Mexico on Saturday, November 16. Dr. Soberon is very willing to change the dates pending such confirmation.

Dear Graciela:

Following on our phone conversation on Tuesday afternoon, I am enclosing, as you requested, a copy of the letter of invitation to the conference of top level science advisers convened by the Carnegie Commission on Science, Technology, and Government in February, 1991. Also enclosed is a copy of my earlier letter to "over 30 scientific leaders worldwide" soliciting their opinions as to whether such a conference would be worthwhile. All but one were strongly favorable. Parts of these letters may be helpful in drafting your own letter of invitation.

Each member invited to the February meeting was sent a copy of Worldwide Science and Technology Advice to the Highest Levels of Governments well in advance of the meeting as background material. Special reference might be made to the Conclusion of my introductory essay on pages 4 and 5 in which the suggestion is made that an unofficial meeting such as Mexico is now organizing might lead to the creation of an enduring organization "that might later be open to all countries of the world. Its informality and flexibility might confer advantages not available to existing official inter-governmental agencies, such as those of the OECD and the UN."

Your meeting of the top level science advisers of Latin America and other western hemisphere countries will be a pioneering event of great promise. Dr. Lederberg and I, as co-chairmen of the Carnegie Commission on Science, Technology, and Government, are gratified by your program and endorse it strongly. You have assured us that you are not seeking any financial commitment from us.

Dr. Allan Bromley and Dr. William Stewart (Chief Science Adviser to the Prime Minister of England), with whom

-2-

I have discussed your program in recent days, are also strongly supportive. Dr. Bromley, with whom I met in Washington this afternoon, recommends that the Honorable William Winegard would be the most appropriate individual to invite from Canada. (He is the Canadian representative to the second meeting of the Carnegie Group, that will be held this October.) I have also posted Dr. Bromley fully on your program, and he expresses his gratification. I am confident that he will accept your invitation.*

My cordial greetings and congratulations to Dr. Soberon and to you.

Sincerely yours,

William T. Golden

Dra. Graciela Rodriguez
Executive Secretary
Science Advisory Council
Felix Cuevas N° 301-4° Piso

* Unfortunately, however, the tentative dates you suggested, November 13-15, are impossible for Dr. Bromley because of inviolable government responsibilities in Washington. His office is to call me back shortly with dates that seem possible for him. I presume that you want Wednesday night through Friday for the meeting, so I have asked him whether November 27-29 or December 4-6 would be possible. October 30-November 1 and November 6-8 and November 20-22 are not possible. I presume that still earlier dates in October would not give you sufficient notice. If this is not so, I will explore such dates with Dr. Bromley.

Dr. Wataru Mori
Executive Board Member
Council for Science and Technology
Office of the Prime Minister
2-2-1 Kasumigaseki, Chiyoda-ku
Tokyo 100 Japan

Dear Dr. Mori:

We are writing on behalf of the Carnegie Commission on Science, Technology, and Government to invite you to attend an unofficial and informal meeting of science advisers to heads of government. The purposes of the meeting are to develop a closer relationship among the science advisers in major countries, to increase their understanding of various national perspectives, and to exchange views on science issues. The Commission's decision to organize the meeting was based on a positive response to the idea from over thirty scientific leaders world-wide.

The Commission was created in 1988 by the Carnegie Corporation of New York, a non-profit foundation, to assess the mechanisms by which the U.S. government incorporates scientific and technological knowledge into policy and administrative decisionmaking. The Commission has a distinguished membership of statesmen, scientists, engineers, and others with experience in government. The enclosed report of the Commission, *Science & Technology and the President*, was influential in elevating the level of the U.S. Presidential Science Adviser and in establishing the President's Council of Advisers on Science and Technology.

Invitations are being extended to science advisers to the heads of government of the Summit countries, the European Commission, and the USSR. The meeting will be held in February or March 1991 at a location about one hour drive from New York's Kennedy airport. The U.S. Science Adviser, Dr. D. Allan Bromley and the U.S.S.R. Science Adviser, Prof. Yuriy Ossipyan, have accepted our invitation to serve as co-chairmen. The agenda will be decided at the meeting, which will be off-the-record if the participants desire.

The meeting will begin with dinner at 6:00 P.M. on a Friday and extend to 4:00 P.M. the following Sunday

CARNegie COMMISSION ON SCIENCE, TECHNOLOGY, AND GOVERNMENT

10 Waverly Place, New York, N.Y. 10003 (212) 998-2150 FAX (212) 995-3181

Please reply to Mr. Golden's private office:
40 Wall Street, New York, NY 10005

March 28, 1990

Dear Dr. Soberon:

I will be grateful for your candid and objective comments on the following nascent idea which is favored by Cyrus Vance, our former Secretary of State, and by Dr. David Hamburg, president of the Carnegie Corporation of New York. The approaching publication of Worldwide Science and Technology Advice to the Highest Levels of Governments, now in press, renders it especially timely. This book will contain articles from thirty-five countries, generally written by the chief science adviser or by the president of the national academy of sciences. In addition, there will be overview articles, and introductory articles by Allan Bromley, President Bush's Science Adviser, and by Frank Press, President of the National Academy of Sciences of the US.

The concept is that a non-governmental agency (perhaps the Carnegie Commission on Science, Technology, and Government or perhaps the American Association for the Advancement of Science or some other group) might convene a meeting, perhaps in New York or Washington, of the chief science and technology advisers to the top levels of some six to ten governments. They would get to know each other better, would explore common problems and opportunities, and would consider the merit and practicality of establishing an organization of science advisers from all countries of the world.

The small group might meet in 1990 or early 1991; the all inclusive group, if recommended, might have its organizational meeting a year later, and perhaps meet every two years thereafter.

It is suggested that in our era of increasing global interdependence, such an organization should encourage the peaceful exchange of ideas, with resultant benefits of cross fertilization, and should advance personal acquaintanceships and trust. It should tend to broaden and intensify governmental and public awareness of the role of science and technology in national and international policy formulation and in everyday life.

What do you think?

Sincerely,

William T. Golden
