THE WHITE HOUSE
WASHINGTON

April 22, 1992

Dear Dr. Dillion:

On behalf of President Bush, thank you for your comments and suggestions about global environmental issues and the United Nations Conference on Environment and Development (UNCED). The President appreciates your concerns and has asked that I respond to your letter of April 6, 1992 regarding these issues.

The United States, under President Bush's leadership, is aggressively pursuing international efforts to address problems related to climate change, ozone depletion, forests, oceans, biological diversity, and technology cooperation with developing countries. The Administration has put forward specific proposals in various international fora to address each of these questions. More important, the United States is already taking specific steps here at home, through both legislation and administrative action, to begin tackling these problems.

Specifically regarding climate change, you may be pleased to know that the United States has already begun taking actions that will have the effect of reducing net emissions of greenhouse gases. These include:

- * President Bush proposed and signed into law the 1990 Clean Air Act, which will reduce greenhouse gas emissions from the utility sector through restrictions on utility air pollutants;
- * The Bush Administration has proposed, both through the National Energy Strategy and through various regulatory measures, to improve energy efficiency in power generation and transmission, buildings, appliances, lighting, and transportation, which will restrain related carbon dioxide emissions;
- * The President has proposed, through his tree planting initiatives, to increase the acreage and to improve the management of forests, which act as greenhouse gas "sinks";
- * The President has proposed to expand the use of renewable and low-emission fuel sources;

- * Since President Bush took office, he has doubled funding for conservation research and development (R&D) and increased funding for renewable R&D by 69 percent; and
- * The Administration has not only proposed, but the President has signed into law, the phaseout of ozone-depleting compounds that are also greenhouse gases.

Additionally, in February 1992, in response to new scientific evidence, President Bush was the first head of state to commit his country unilaterally to accelerating the date for the complete phaseout of the production of chlorofluorocarbons (CFCs). The President's action moves up the phaseout date of CFCs, which deplete the Earth's ozone layer, to December 31, 1995. Due to a number of previous Administration actions, U.S. production of ozone-depleting substances is already more than 40 percent below levels allowed by the internationally agreed Montreal Protocol. Under the new schedule, the U.S. will eliminate production four years ahead of the current international deadline, thus continuing the record of U.S. leadership in this area extending back to the mid-1970s.

The United States supports a comprehensive approach, addressing all greenhouse gases, not just carbon dioxide, and "sinks," such as forests. Focusing exclusively on carbon dioxide emissions, as some have proposed, is an inadequate response.

The United States has committed \$25 million to assist developing countries in planning to mitigate and/or adapt to climate change. The U.S. has stepped up its own climate action plan, first outlined in February 1991, including actions in such areas as energy efficiency, transportation, reduced emission supply technologies, agriculture, natural resources, and technology R&D. The United States has also committed \$50 million to the core fund of the Global Environment Facility (GEF) and \$150 million in parallel financing through the U.S. Agency for International Development. In addition to addressing global climate change, the GEF also funds projects concerning biodiversity, international waters, and ozone.

The U.S. Global Change Research Program is the world's largest such program and thus provides much of the scientific foundation for international agreements on climate change and ozone depletion. The Bush Administration has invested \$2.6 billion in global change research, far more than any other country, with an additional \$1.3 billion proposed for fiscal 1993 -- over six times the fiscal 1989 level. Research on the scientific and economic aspects

Page 3 - Dr. Dillion

of global climate change will enable policy makers to make better judgments about potential impacts and policy actions.

Regarding the United Nations Conference on Environment and Development (UNCED), scheduled this June in Rio de Janeiro, Brazil, President Bush is committed to achieving international agreement on a framework convention on climate change. In addition to a global agreement on climate change, the Bush Administration also hopes UNCED will produce strategies and specific initiatives to improve conservation of forests, oceans, and biological diversity, and to increase technology cooperation with developing countries. You can be sure that the United States will be well represented at the conference.

As we move forward into the 1990s, the United States will continue to address global environmental challenges within a context of expanding economic opportunities for all the world's people. The United States wants concrete, practical results from UNCED -- results that will guide future action on the full range of environmental and developmental issues.

Thank you for taking the time to express your interest on these environmental issues with President Bush. You can be sure that the President will continue working with other nations to obtain global solutions to these challenging issues.

With the President's best wishes,

Sincerely yours,

Re: Rio Conference

Dear Mr. President:

I was delighted you came to St. John's Lafayette Square recently and walked through Lafayette Park. Had you been able to spend more time, you might have contemplated the joy you would bring to our countrymen and citizens of other lands if you take the lead at the International Conference on Global Warming in Rio in June. Your absence will make us look irresponsible, selfish, unconcerned about our small planet. It will further hurt our competitiveness.

When Martin Luther King and other African-American leaders met with John Kennedy at the White House, in 1963, the President realized they could not call off the August march on Washington for civil rights; he was perceiving them as Boston precinct captains who could give orders. To his credit, Kennedy decided to get out ahead, and to lead, to take some credit for actions which he first thought might harm chances for civil rights legislation in Congress. You could do the same on urging a global warming treaty. Your knowledge of Chinese might be useful: a crisis is an opportunity.

Respectfully,

Wilton S. Dillon

President George Bush
The White House
Washington D.C. 20500

Dear President Bush,

It was our pleasure to host a regional convocation on "Justice, Peace and the Integrity of Creation" here at the Iliff School of Theology this week. Officials from the World Council of Churches, including general secretary Emilio Castro and Dr. Preman Niles, were among the presenters.

The most stirring address, however, was given by former president Rodrigo Corazo of Costa Rica. At the end of his vivid catalogue of the promises and perils which confront the planet in the coming millennium, he made a passionate request that we urge our president to attend the Earth Summit (UNCED) in Rio de Janeiro, 1 - 12 June.

Because we are the one remaining superpower in the world, our presence at a conference on the future of the planet is critical, he explained. And the leadership of the President of the United States is critical in deciding the fate of the globe.

Accordingly, our Executive Committee of the Colorado Council of Churches, meeting this morning at the Episcopal Foundation, unanimously requested me to write you on their behalf to urge you in the strongest possible way to attend the meeting in Rio de Janeiro.

We believe that your presence at this conference will mean the difference between its success in defining our planetary destiny and its failure to be nothing more than just another meeting.

We further believe that your leadership on the issues affecting global environment will be seen by all our fellow citizens as consistent with your role as the commanding figure in international policy determination.

Please give our request every consideration, for we make it out of the faith we share as Christians.

Most sincerely yours,

Gilbert J. Horn, for the Executive Committee

THE WHITE HOUSE
WASHINGTON

April 22, 1992

Dear Mr. Kendall:

On behalf of President Bush, thank you for forwarding the 10,000 letters from the Union's sponsors with comments and suggestions about global environmental issues and the United Nations Conference on Environment and Development (UNCED). The President appreciates your concerns and has asked that I respond to your letter of April 10, 1992 regarding these issues.

The United States, under President Bush's leadership, is aggressively pursuing international efforts to address problems related to climate change, ozone depletion, forests, oceans, biological diversity, and technology cooperation with developing countries. The Administration has put forward specific proposals in various international fora to address each of these questions. More important, the United States is already taking specific steps here at home, through both legislation and administrative action, to begin tackling these problems.

Specifically regarding climate change, you may be pleased to know that the United States has already begun taking actions that will have the effect of reducing net emissions of greenhouse gases. These include:

- * President Bush proposed and signed into law the 1990 Clean Air Act, which will reduce greenhouse gas emissions from the utility sector through restrictions on utility air pollutants;
- * The Bush Administration has proposed, both through the National Energy Strategy and through various regulatory measures, to improve energy efficiency in power generation and transmission, buildings, appliances, lighting, and transportation, which will restrain related carbon dioxide emissions;
- * The President has proposed, through his tree planting initiatives, to increase the acreage and to improve the management of forests, which act as greenhouse gas "sinks";
- * The President has proposed to expand the use of renewable and low-emission fuel sources;

- * Since President Bush took office, he has doubled funding for conservation research and development (R&D) and increased funding for renewable R&D by 69 percent; and
- * The Administration has not only proposed, but the President has signed into law, the phaseout of ozone-depleting compounds that are also greenhouse gases.

Additionally, in February 1992, in response to new scientific evidence, President Bush was the first head of state to commit his country unilaterally to accelerating the date for the complete phaseout of the production of chlorofluorocarbons (CFCs). The President's action moves up the phaseout date of CFCs, which deplete the Earth's ozone layer, to December 31, 1995. Due to a number of previous Administration actions, U.S. production of ozone-depleting substances is already more than 40 percent below levels allowed by the internationally agreed Montreal Protocol. Under the new schedule, the U.S. will eliminate production four years ahead of the current international deadline, thus continuing the record of U.S. leadership in this area extending back to the mid-1970s.

The United States supports a comprehensive approach, addressing all greenhouse gases, not just carbon dioxide, and "sinks," such as forests. Focusing exclusively on carbon dioxide emissions, as some have proposed, is an inadequate response.

The United States has committed \$25 million to assist developing countries in planning to mitigate and/or adapt to climate change. The U.S. has stepped up its own climate action plan, first outlined in February 1991, including actions in such areas as energy efficiency, transportation, reduced emission supply technologies, agriculture, natural resources, and technology R&D. The United States has also committed \$50 million to the core fund of the Global Environment Facility (GEF) and \$150 million in parallel financing through the U.S. Agency for International Development. In addition to addressing global climate change, the GEF also funds projects concerning biodiversity, international waters, and ozone.

The U.S. Global Change Research Program is the world's largest such program and thus provides much of the scientific foundation for international agreements on climate change and ozone depletion. The Bush Administration has invested \$2.6 billion in global change research, far more than any other country, with an additional \$1.3 billion proposed for fiscal 1993 -- over six times the fiscal 1989 level. Research on the scientific and economic aspects

Page 3 - Mr. Kendall

of global climate change will enable policy makers to make better judgments about potential impacts and policy actions.

Regarding the United Nations Conference on Environment and Development (UNCED), scheduled this June in Rio de Janeiro, Brazil, President Bush is committed to achieving international agreement on a framework convention on climate change. In addition to a global agreement on climate change, the Bush Administration also hopes UNCED will produce strategies and specific initiatives to improve conservation of forests, oceans, and biological diversity, and to increase technology cooperation with developing countries. You can be sure that the United States will be well represented at the conference.

As we move forward into the 1990s, the United States will continue to address global environmental challenges within a context of expanding economic opportunities for all the world's people. The United States wants concrete, practical results from UNCED -- results that will guide future action on the full range of environmental and developmental issues.

Thank you for taking the time to express your interest on these environmental issues with President Bush. You can be sure that the President will continue working with other nations to obtain global solutions to these challenging issues.

With the President's best wishes,

Sincerely yours,

D. Allan Bromley

April 10, 1992

President George Bush
The White House
1600 Pennsylvania Avenue
Washington, DC 20500

Dear President Bush:

In the accompanying boxes you will find nearly 10,000 letters from Union Concerned Scientists' sponsors urging you to make an explicit United States commitment to limit emissions of carbon dioxide and to attend the June UNCED meeting in Brazil. The signatories of these letters include many members of the scientific community, as well as other citizens who share the view that the United States must take a leadership role in forging an international climate change treaty.

The time is at hand for the United States to end its isolation on this issue. We know that a US delegation is meeting in Europe this week with some of the other participants in the treaty negotiations and that the talks will resume again on April 30 in New York. The world community would welcome a new US initiative at these meetings.

A commitment to limit carbon dioxide emissions need not pose a burden on the nation's economy. To the contrary, implementation of appropriate energy policies could provide substantial economic benefits -- if only your administration would exercise the necessary leadership. We ask you to do so.

Sincerely,

Henry W. Kendall

President George Bush
The White House
1600 Pennsylvania Avenue
Washington, DC 20500

Dear President Bush:

The issues of climate change and energy policy are absolutely critical to the preservation of our economy and environment.

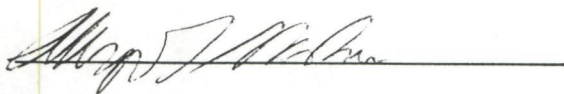

The United States is isolated in its refusal to adopt policies that would significantly reduce carbon dioxide emissions.

I join the Union of Concerned Scientists in calling upon you to:

- direct full United States participation in Earth Summit, including your personal attendance;
- commit the United States to reduce carbon dioxide emissions to 20 percent below those of 1990 by the year 2000;
- sign the climate change treaty that is to be presented at Earth Summit; and
- fully implement energy policies in the United States that will meet the commitment agreed to at Earth Summit.

We want you to go to Rio de Janeiro prepared to show the world that the United States will still lead the way when it comes to saving the global environment.

Sincerely,

Date

Dear Ms. LaGrasse:

On behalf of President Bush, thank you for your suggestion regarding his attendance at the United Nations Conference on Environment and Development (UNCED) in Rio de Janeiro. The President appreciates your interest and has asked that I respond to your letter of April 12, 1992 regarding this issue.

We appreciate your taking the time to write and for expressing your candid views on this matter. Letters such as yours are very helpful in our ongoing discussions of the nation's environmental agenda.

Again, thank you for your comments on and interest in this important matter.

With the President's best wishes,

Sincerely yours,

April 12, 1992

President George Bush
The White House
Washington, D. C. 20500

Dear President Bush:

We would like to urge you not to attend the Earth Summit in Rio de Janeiro during June.

Although we are environmentalists, we are forced to make the devastating Indictment, which we have mailed separately to your office, that the environmentalist movement has turned anti-people, and is long on the way toward doing more harm than good.

Economic persecution being perpetrated on rural families and communities by environmentalists must be resisted with a clear statement by the President of the United States that this country does not fall in line with the world-wide elitest environmental agenda.

In fact, we need the help of the office of the President of the United States here in the Adirondacks and in many other localities in the United States against the overwhelming power of preservationists. So, if you have time to spare, why not make a trip up here to help us against the agenda of Governor Mario Cuomo and his preservationist clique to depopulate our region, for starters?

Respectfully,

Carol W. LaGrasse

THE WHITE HOUSE
WASHINGTON

April 22, 1992

Dear Mr. Man:

On behalf of President Bush, thank you for your comments and suggestions about global environmental issues and the United Nations Conference on Environment and Development (UNCED). The President appreciates your concerns and has asked that I respond to your letter of April 9, 1992 regarding these issues.

The United States, under President Bush's leadership, is aggressively pursuing international efforts to address problems related to climate change, ozone depletion, forests, oceans, biological diversity, and technology cooperation with developing countries. The Administration has put forward specific proposals in various international fora to address each of these questions. More important, the United States is already taking specific steps here at home, through both legislation and administrative action, to begin tackling these problems.

Specifically regarding climate change, you may be pleased to know that the United States has already begun taking actions that will have the effect of reducing net emissions of greenhouse gases. These include:

- * President Bush proposed and signed into law the 1990 Clean Air Act, which will reduce greenhouse gas emissions from the utility sector through restrictions on utility air pollutants;
- * The Bush Administration has proposed, both through the National Energy Strategy and through various regulatory measures, to improve energy efficiency in power generation and transmission, buildings, appliances, lighting, and transportation, which will restrain related carbon dioxide emissions;
- * The President has proposed, through his tree planting initiatives, to increase the acreage and to improve the management of forests, which act as greenhouse gas "sinks";
- * The President has proposed to expand the use of renewable and low-emission fuel sources;

- * Since President Bush took office, he has doubled funding for conservation research and development (R&D) and increased funding for renewable R&D by 69 percent; and
- * The Administration has not only proposed, but the President has signed into law, the phaseout of ozone-depleting compounds that are also greenhouse gases.

Additionally, in February 1992, in response to new scientific evidence, President Bush was the first head of state to commit his country unilaterally to accelerating the date for the complete phaseout of the production of chlorofluorocarbons (CFCs). The President's action moves up the phaseout date of CFCs, which deplete the Earth's ozone layer, to December 31, 1995. Due to a number of previous Administration actions, U.S. production of ozone-depleting substances is already more than 40 percent below levels allowed by the internationally agreed Montreal Protocol. Under the new schedule, the U.S. will eliminate production four years ahead of the current international deadline, thus continuing the record of U.S. leadership in this area extending back to the mid-1970s.

The United States supports a comprehensive approach, addressing all greenhouse gases, not just carbon dioxide, and "sinks," such as forests. Focusing exclusively on carbon dioxide emissions, as some have proposed, is an inadequate response.

The United States has committed \$25 million to assist developing countries in planning to mitigate and/or adapt to climate change. The U.S. has stepped up its own climate action plan, first outlined in February 1991, including actions in such areas as energy efficiency, transportation, reduced emission supply technologies, agriculture, natural resources, and technology R&D. The United States has also committed \$50 million to the core fund of the Global Environment Facility (GEF) and \$150 million in parallel financing through the U.S. Agency for International Development. In addition to addressing global climate change, the GEF also funds projects concerning biodiversity, international waters, and ozone.

The U.S. Global Change Research Program is the world's largest such program and thus provides much of the scientific foundation for international agreements on climate change and ozone depletion. The Bush Administration has invested \$2.6 billion in global change research, far more than any other country, with an additional \$1.3 billion proposed for fiscal 1993 -- over six times the fiscal 1989 level. Research on the scientific and economic aspects

Page 3 - Mr. Man

of global climate change will enable policy makers to make better judgments about potential impacts and policy actions.

Regarding the United Nations Conference on Environment and Development (UNCED), scheduled this June in Rio de Janeiro, Brazil, President Bush is committed to achieving international agreement on a framework convention on climate change. In addition to a global agreement on climate change, the Bush Administration also hopes UNCED will produce strategies and specific initiatives to improve conservation of forests, oceans, and biological diversity, and to increase technology cooperation with developing countries. You can be sure that the United States will be well represented at the conference.

As we move forward into the 1990s, the United States will continue to address global environmental challenges within a context of expanding economic opportunities for all the world's people. The United States wants concrete, practical results from UNCED -- results that will guide future action on the full range of environmental and developmental issues.

Thank you for taking the time to express your interest on these environmental issues with President Bush. You can be sure that the President will continue working with other nations to obtain global solutions to these challenging issues.

With the President's best wishes,

Sincerely yours,

FAX 202 686-1001

Dear Mr. President:

In June of this year, the United Nations will host the Conference on Environment and Development in Rio de Janeiro. On behalf of the 10,000 members of the American Society of Landscape Architects, I urge you to lead the U.S. delegation to this conference.

Landscape architects propose and direct changes in, and preservation of, the natural and built environments through their practices worldwide; and they strongly advocate enlightened public environmental policy. The American Society of Landscape Architects has been working with the Congress, federal regulatory agencies and international partners to develop strategies for sustainable development which would lessen the impact of development on the natural environment.

In the "National Energy Policy" released by your Administration last year, you called for "reforestation, greater energy efficiency, and reduction of the emission of chlorofluorocarbons and other substances which deplete the Earth's protective ozone layer." Your personal restatement of these goals in Rio de Janeiro and the Administration's agreement to a cap on emissions of carbon dioxide would dramatize to the American people the importance our government and our nation places on the improvement and sustainability of the global environment.

The American Society of Landscape Architects will continue to work with your Administration and the private and public sectors on sustainable development. Your appearance and leadership at the Rio conference will lend critical support to this effort.

Sincerely,

Cameron R.J. Man, FASLA

April 22, 1992

Dear Mr. Milosh:

On behalf of President Bush, thank you for your comments and suggestions about global environmental issues and the United Nations Conference on Environment and Development (UNCED). The President appreciates your concerns and has asked that I respond to your message of April 9, 1992 regarding these issues.

The United States, under President Bush's leadership, is aggressively pursuing international efforts to address problems related to climate change, ozone depletion, forests, oceans, biological diversity, and technology cooperation with developing countries. The Administration has put forward specific proposals in various international fora to address each of these questions. More important, the United States is already taking specific steps here at home, through both legislation and administrative action, to begin tackling these problems.

Specifically regarding climate change, you may be pleased to know that the United States has already begun taking actions that will have the effect of reducing net emissions of greenhouse gases. These include:

- * President Bush proposed and signed into law the 1990 Clean Air Act, which will reduce greenhouse gas emissions from the utility sector through restrictions on utility air pollutants;
- * The Bush Administration has proposed, both through the National Energy Strategy and through various regulatory measures, to improve energy efficiency in power generation and transmission, buildings, appliances, lighting, and transportation, which will restrain related carbon dioxide emissions;
- * The President has proposed, through his tree planting initiatives, to increase the acreage and to improve the management of forests, which act as greenhouse gas "sinks";
- * The President has proposed to expand the use of renewable and low-emission fuel sources;

- * Since President Bush took office, he has doubled funding for conservation research and development (R&D) and increased funding for renewable R&D by 69 percent; and
- * The Administration has not only proposed, but the President has signed into law, the phaseout of ozone-depleting compounds that are also greenhouse gases.

Additionally, in February 1992, in response to new scientific evidence, President Bush was the first head of state to commit his country unilaterally to accelerating the date for the complete phaseout of the production of chlorofluorocarbons (CFCs). The President's action moves up the phaseout date of CFCs, which deplete the Earth's ozone layer, to December 31, 1995. Due to a number of previous Administration actions, U.S. production of ozone-depleting substances is already more than 40 percent below levels allowed by the internationally agreed Montreal Protocol. Under the new schedule, the U.S. will eliminate production four years ahead of the current international deadline, thus continuing the record of U.S. leadership in this area extending back to the mid-1970s.

The United States supports a comprehensive approach, addressing all greenhouse gases, not just carbon dioxide, and "sinks," such as forests. Focusing exclusively on carbon dioxide emissions, as some have proposed, is an inadequate response.

The United States has committed \$25 million to assist developing countries in planning to mitigate and/or adapt to climate change. The U.S. has stepped up its own climate action plan, first outlined in February 1991, including actions in such areas as energy efficiency, transportation, reduced emission supply technologies, agriculture, natural resources, and technology R&D. The United States has also committed \$50 million to the core fund of the Global Environment Facility (GEF) and \$150 million in parallel financing through the U.S. Agency for International Development. In addition to addressing global climate change, the GEF also funds projects concerning biodiversity, international waters, and ozone.

The U.S. Global Change Research Program is the world's largest such program and thus provides much of the scientific foundation for international agreements on climate change and ozone depletion. The Bush Administration has invested \$2.6 billion in global change research, far more than any other country, with an additional \$1.3 billion proposed for fiscal 1993 -- over six times the fiscal 1989 level. Research on the scientific and economic aspects

Page 3 - Mr. Milosh

of global climate change will enable policy makers to make better judgments about potential impacts and policy actions.

Regarding the United Nations Conference on Environment and Development (UNCED), scheduled this June in Rio de Janeiro, Brazil, President Bush is committed to achieving international agreement on a framework convention on climate change. In addition to a global agreement on climate change, the Bush Administration also hopes UNCED will produce strategies and specific initiatives to improve conservation of forests, oceans, and biological diversity, and to increase technology cooperation with developing countries. You can be sure that the United States will be well represented at the conference.

As we move forward into the 1990s, the United States will continue to address global environmental challenges within a context of expanding economic opportunities for all the world's people. The United States wants concrete, practical results from UNCED -- results that will guide future action on the full range of environmental and developmental issues.

Thank you for taking the time to express your interest on these environmental issues with President Bush. You can be sure that the President will continue working with other nations to obtain global solutions to these challenging issues.

With the President's best wishes,

Sincerely yours,

A handwritten signature in dark ink, appearing to read "D. Allan Bromley". The signature is fluid and cursive, with the first name "D. Allan" and the last name "Bromley" clearly distinguishable.

EUGENE J. MILOSH
President

April 9, 1992

President George Bush
Executive Office of the President
1600 Pennsylvania Avenue, N.W.
Washington, DC 20500

Mr. President:

The American Association of Exporters and Importers urges you to attend the "Earth Summit" Conference in Rio de Janeiro in June, in the words of Brazil's President Collor, "to ... send a strong signal to the world of the importance of a global approach to environmental problems". It seems to us that a decent respect for the opinions of mankind also requires the presence of the chief of the world's leading economy and political power at a conference in which both the nations of the Third World and of the other industrialized nations have invested so much effort and hope. Some 40 to 60 other heads of state are expected. Our 1,200 members, engaged in importing and exporting and manufacturing here and around the world, see multi-national solutions as the most effective and least troublesome answer to environmental problems. Such an approach were it successful should defuse environmentalist opposition to the Uruguay Round GATT negotiations and the NAFTA negotiations, and strip the camouflage from the protectionists-in-environmental-clothing.

We realize that the environmental question be they on climate control, species protection, or on cost disadvantages of pollution control to the industrialized nations, are extremely complex and some proposed solutions are too costly. On the other hand, the costs of environmental degradation, species loss and trade battles are very real, too, and U.S opportunities in the fields of environmental protection and remediation are real and substantial. Charges of "environmental imperialism" against the United States, accompanied by unproductive trade battles, can only harm us.

While it is true that Earth Summit expectations are unrealistic in many quarters, (when needs are measured against monies available), the United States cannot avoid criticism no matter what decisions are reached. At very least, participation in the Rio Conference by our "environmental President" should bring our country the satisfaction of having joined in the attempt to solve very serious and divisive questions in the right way.

Respectfully yours,

Eugene Milosh

Dear President Bush,

As a 1991 winner of the Presidential Award for Excellence in Science Teaching I want to thank you for spending time with our group at the White House. It was one of the highlights of my week in Washington. The recognition helps to keep alive my drive to become a better teacher and the grant money will certainly make a difference in the quality of education we provide in my district.

I wanted to take a moment to introduce you to a project I thought might be of interest to you. Originally called the U.S./U.S.S.R. Launch Exchange, our goal is to bring together talented science students from the U.S. and Russia in the hope that they will build friendships that develop into professional collaborations when they become engineers and scientists. With the space program as our focus, in January of 1991, I took thirty U.S. students to the Soviet Union. We traveled with thirty Russian students and visited many of their space facilities, including the control center just outside Moscow, and the cosmodrome in Biakonur. We were the first group of students from any where in the world to tour this amazing complex. The Russians were wonderful hosts going out of their way to give us an extraordinary experience. I have enclosed a copy of the P.B.S. television show, "Newton's Apple" that featured our trip.

In May we will return the favor by hosting the Russian students. Because of the drastic changes in their economy they will only be able to bring 15 students. While they are here we will tour the space center in Florida, visit the space related industries in Rochester and Minneapolis, Minnesota, and end our trip in Washington, D.C.

I know how terribly busy you are. If it is not possible to meet with you, I wondered if you might be able to arrange some other special stop we could offer our friends. We will be in Washington on May 14, 15, and the morning of May 16. I do want to make this a unique experience and look forward to hearing from your office.

Thank you,

The Honorable Samuel K. Skinner
Chief Of Staff
The White House
Washington, D.C. 20500

Dear Sam:

I write to request that you keep the planned National Science Foundation relocation to northern Virginia on track.

Testifying recently before the House Appropriations Subcommittee on Veterans Affairs, HUD, and Independent Agencies, NSF Director Walter Massey left the strong impression that the money requested in the President's Budget for the relocation would be better used on other activities, and that NSF and the National Science Board did not support the move. This is contrary to the Administration's position, contrary to the efforts of OMB, and contrary to several years of work by GSA.

The suggestion has been made that Dr. Massey either be fired or promoted: perhaps he should be moved to OMB where he can legitimately make final administration policy on the NSF budget.

The long-standing arguments supporting the move remain: NSF needs new space to manage its expanding research and education programs; GSA conducted a site selection process, which involved over 50 sites in Maryland, Virginia, and the District of Columbia, and selected a site in northern Virginia which won both in terms of technical specifications and cost; the move will save the American taxpayers \$70 million over the next 20 years; GSA is bound to a lease at the new site, and could lose up to \$5 million per year if the move is delayed.

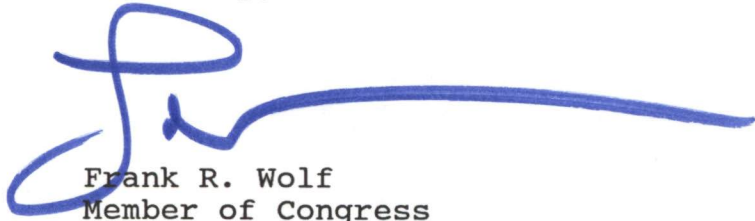

Another major project in the President's Fiscal Year 1993 Budget is also involved: the request to purchase space to house the U.S. Secret Service. The Secret Service currently shares with NSF a building at 1800 G Street, N.W. In order to ensure the best deal for the taxpayer, GSA should be able to consider that building in its competition for space for the Secret Service. So the assurance that NSF will vacate that space is a prerequisite to GSA's moving forward with the Secret Service headquarters project.

The Honorable Samuel K. Skinner
March 5, 1992
Page Two

Please let me know that every effort has been made by NSF to support the request for relocation funding.

With best regards.

Sincerely,

A handwritten signature in blue ink, appearing to be 'Frank R. Wolf', with a long horizontal flourish extending to the right.

Frank R. Wolf
Member of Congress

FRW:ec

cc: The Honorable Nicholas F. Brady
The Honorable Richard G. Darman

Dr. Massey is out of control. Someone should explain to him that the Pres. is head of the Adm. His actions might hurt the taxpayer. It is also inappropriate for NSF to actively lobby the Hill on this issue and perhaps unlawful.

MEMORANDUM FOR STAFF OF THE EXECUTIVE OFFICE OF THE PRESIDENT

FROM:

C. GREGG PETERSMEYER *GP*
ASSISTANT TO THE PRESIDENT AND
DIRECTOR OF THE OFFICE OF NATIONAL SERVICE

SUBJECT:

BLOOD DRIVE, TUESDAY, DECEMBER 8, 1992

The Executive Office of the President has always been looked upon as a leader in participation of the American Red Cross Blood Donor Program. Once again the Red Cross will be coming to the OEOB asking for donations.

The Red Cross needs your help in rebuilding it's blood supply that now suffers from a lack of donations. They are in dire need of TYPE O AND TYPE B BLOOD!

I hope that you will make time in your schedule to be a part of this special effort. The blood drive will be held on Tuesday, December 8, 1992, in Room 474 of the OEOB, from **9:00am until 3:00pm**. Please participate as a donor by calling Shara Castle, on X6266 by Monday, December 7, 1992 for an appointment.

Many of you have expressed concern regarding the time period required to donate blood. To accommodate our donors busy time schedules, we have now added additional beds and nurses. The Red Cross values it's blood donors and hopes this will alleviate some of the wait.

Thank you for your support.

6 March 1992

President George Bush
1600 Pennsylvania Avenue
Washington D.C.
20500

Dear Mr. President,

Electro-Lane Inc., a Corporation founded and based in Washington State, has far reaching plans for expanding operations, Research and Development (R&D), and manufacturing right here in Washington.

Electro-Lane has recently submitted a proposal to the U.S. Department of Commerce National Institute of Standards and Technology (NIST) Advanced Technology Program (ATP). The ATP expects to award some 10-15 contracts early in 1992 utilizing the \$25 Million already appropriated for the advancement of technologies that have strong commercial potential.

Our successful enterprise will result in new employment opportunities estimated to be seventy five persons by 1996, and to create a new market of \$65 Million by 1998. This technology/product is based on developments in renewable photovoltaic energy. Clean energy we all want and need.

Mr. President, our company is seeking your help in the success of our ATP proposal titled "Modular Integrated Solar Energy Tiles." We believe this contract award will help Washington, our Nation and the environment.

Sincerely,

Paul R. Rodriguez
President, Electro-Lane Inc.
