Office of Opportunities in Science

In January 1973, the AAAS Board of Directors established the Office of Opportunities in Science, the major purposes of which are:

- *to increase the number of women, minority and handicapped persons in the natural, social and applied sciences;
- *to increase the kinds of opportunities available to these groups; and
- *to increase the participation of minority, women and handicapped scientists and engineers in policy-making, advisory and managerial positions.

To fulfill these purposes, the OOS is involved in many programs and activities. It functions as a clearinghouse on information on women, minorities and the handicapped; it acts as a liaison with other professional organizations to help coordinate equal opportunity efforts; it works with the Scientific Manpower Commission on problems dealing with the recruitment, education and utilization of women, minority and handicapped scientists; and within the AAAS it encourages the increased participation of these groups and the consideration of issues concerning them in all programs and activities of the Association.

Under the guidance of its Advisory Committee and Panels, the Office has developed numerous programs to implement its objectives, including three ongoing projects. The Project on Native Americans in Science is investigating the problems and developing strategies for improving the science education and opportunities available to Native Americans. It is also developing programs on ethnoscience and ethnomedicine, and on altering the attitudes of the general public and educators that are detrimental to Native American progress in technical fields.

The Project on the Handicapped in Science seeks to improve the status and participation of handicapped scientists and to improve science education available to handicapped youth. An ongoing activity is to make professional meetings completely accessible to the physically disabled. Other activities include a study of handicapped scientists' coping strategies; a multi-state lecture tour by a deaf physicist serving as a role model for handicapped students, parents, teachers and counselors; a study and conference on barriers to post-secondary science education for handicapped students; a newsletter, Access to Science, in conjunction with Tufts University Research and Training Center No. 7; and recommendations for research in science and technology for the handicapped.

The Project on Women in Science seeks to increase the numbers, status and opportunities for women in the sciences. A year-long study on the Participation of Women in Scientific Research has recently been completed, culminating in an extensive report soon to be published. An Inventory of Programs in Science and Mathematics for Women will catalogue existing programs that encourage women to enter the sciences and mathematics. Occasionally there is collaboration between OOS projects such as a Conference on Minority Women Scientists which resulted in the publication of The Double Bind: The Price of Being a Minority Woman in Science.

OOS welcomes ideas, suggestions and help from all who are interested.

AAAS Publication No. 78-13

The information in this Directory was compiled entirely from questionnaires voluntarily submitted by the scientists listed. The American Association for the Advancement of Science assumes the responsibility for the compilation and editing of the information received and for publication of the Directory, but cannot vouch for the qualifications and expertise of the scientists listed because the substance of the entries has not been independently verified by the Association. No endorsement of individual scientists or engineers is implied or intended by their inclusion in this publication. Similarly, no inference should be made regarding omission of an individual from these pages.

The project "A Resource Directory of Handicapped Scientists and Guide for Project Directors" and this publication were supported by the National Science Foundation, Grant No. SP177-19913.

John J. Gavin, Edward C. Keller and S. Phyllis Stearner
the first three members of the
AAAS Resource Group of Handicapped Scientists

Acknowledgments

In developing this Directory of Handicapped Scientists, many persons generously contributed their time and assistance. In particular we are indebted to the more than 560 handicapped scientists, engineers and medical practitioners who filled out the lengthy questionnaires. Of these, 552 verified their entries as edited and demonstrated a willingness to be listed, truly a record rate of return. In their willingness to be listed as scientists who are handicapped - sometimes after educational and professional experiences of discrimination have accrued from the latter - these colleagues exhibit a kind of personal courage for which we want to express our deepest appreciation. Of course, not all of the known handicapped scientists are listed in this volume. A few have chosen not to be listed, and some for other reasons unknown to us declined to return the questionnaires. Some arrived too late for processing in this volume, and we hope to include them in a later supplement. The primary reason for the incomplete nature of this volume is that our knowledge of handicapped scientists, engineers, and medical professionals is growing constantly. Not a week passes when we do not learn of additional individuals who should be included. In parallel fashion, the number in the AAAS Resource Group of Handicapped Scientists grew from about six hundred when we began in the fall of 1977 to more than eight hundred at present. We expect that publication of this volume will stimulate identification of still more.

We want also to thank the officers of the National Science Foundation who recognized the need of agencies, organizations, and individuals to utilize more fully the national human resources represented by handicapped scientists. We are profoundly grateful for its support of this Directory. At the AAAS Office of Opportunities in Science we receive numerous requests from federal and private agencies, universities and school systems for assistance in identifying handicapped - and/or women or minority - scientists to help on a particular task. They all lament, as we do, the lack of good directories to assist them in their search. With Foundation support, this directory now fills the gap for handicapped scientists.

Our particular thanks go to Janet Bragg for her extremely diligent and conscientious efforts in helping to prepare the Directory and roster from the outset and in the final exacting typing of the entries. The following should also be recognized for their contributions - James Sattler for helping to set up the system and for typing the indices; Cheryl Davis for her specialized knowledge concerning the disabled and her subsequent assistance in this regard; Mark Ozer for his technical skills in advising on the medical classifications; Lorraine Stillwell for her assistance in obtaining approval of entries from the listed scientists; Michele L. Aldrich for her help in designing the questionnaire; Karen Ehrlich for her proficient editorial abilities and her support in general; and Anne Holdsworth and Kathryn Wolff for their recommendations with respect to the production of the Directory.

INTRODUCTION

Since the American Association for the Advancement of Science (AAAS) and its Project on the Handicapped in Science began efforts to promote opportunities in science for handicapped persons, the Association's activities have been guided by the advice and experience of a group of handicapped scientists. This, the Resource Group, has burgeoned in the course of three years from a handful of individuals to more than eight hundred men and women. Through their efforts, the AAAS Project on the Handicapped in Science has facilitated communication and interaction among handicapped scientists, science students, handicapped youth and their parents and teachers, school systems, academic scientists and science educators, employers, the media, and other scientists.

As the value of the Resource Group became evident, the National Science Foundation recognized the need to identify handicapped individuals working within a broad spectrum of scientific disciplines who could share their experience and expertise with government agencies, Congress, scientific societies, educational institutions, and organizations of and for handicapped persons. The need became more pressing with the recent passage of federal regulations which require recipients of federal funds to consult with disabled persons in their program planning and evaluation. Thus was born the idea of the AAAS Resource Directory of Handicapped Scientists.

The information in the Directory was compiled primarily from questionnaires sent to nine hundred potential respondents who had identified themselves to the AAAS as being interested in helping to remove barriers to science education and careers for the handicapped. Five hundred and sixty individuals responded to the questionnaires and agreed to have their names listed in the directory. Each person has provided information concerning his or her educational background, scientific discipline, nature of handicapping condition and its onset, geographic location, most recent employment, and areas of expertise and consulting interests. All of those listed in the Resource Directory of Handicapped Scientists received copies of their individual entries for approval and by their signature attested to the accuracy of the information and gave permission to publish the data found in this volume.

Research for the roster of disabled scientists, of which this Directory is a part, is a continuing activity of the AAAS Project on the Handicapped in Science. Since the inception of the Project in 1975, a data bank of information on handicapped scientists has been developed, offering extensive useful information on a roster of handicapped scientists. This includes a wealth of detail on barriers and coping strategies, educational and professional experience, collected primarily for research purposes. The detailed information in the larger system remains confidential, and only the data in the Resource Directory are published. The entire roster system will be evaluated on an ongoing basis to determine who uses its resources and how the resources are being used, and how it can be made more useful to the groups for which it has been developed.

The information presented in the Directory will be updated periodically as new changes in status or address are reported. We hope that addenda to the directory may be published as changes and additions require.

We appreciate critiques from users of the directory regarding its format and usefulness of content. We also want to hear of experiences you have with the disabled

scientists listed herein. Your experiences will undoubtedly be of value to others and the AAAS Project on the Handicapped in Science will do its best to see to circulation of useful information.

The Resource Group of Handicapped Scientists

In 1975, the Project on the Handicapped in Science of the American Association for the Advancement of Science began to ask disabled scientists to assist in the identification of barriers faced by handicapped people in receiving an education in science and entering science careers. As these persons identified themselves, a Resource Group was formed of these individuals who could share their experiences in overcoming such barriers. At this time, over eight hundred scientists have joined this Resource Group and stand ready to share a vast amount of information with people across the nation who are attempting to remove the barriers to quality science education and career options for handicapped persons.

The Resource Group is just what it implies - a group of people who are willing to serve as human resources to others to help solve problems for which they have already successfully developed strategies. The individuals in the Resource Group represent all areas of science, including the natural, physical, social and behavioral sciences, as well as engineering, mathematics, and medicine. To be eligible as a member of the Resource Group, an individual must have or be working on a degree in a scientific, engineering or medical discipline, or work in a comparable scientific field. Members of the group collectively represent a vast pool of experience and often are able to serve as mutual resources as well as to others. The AAAS expects the Resource Group to grow larger and is always seeking new avenues to use its services most effectively.

All news of the Project on the Handicapped in Science and other pertinent information is sent to the entire group throughout the year. When a particular request is made for assistance from an individual member, or group of members, permission is gained before names are released. We welcome the addition of new members to the Resource Group of Handicapped Scientists. Interested persons should write to the AAAS for an application; there are no admissions or other fees.

PROPOSED USES OF THE DIRECTORY

Rosters of professional persons may serve several important functions, not all of which are necessarily intended by the compilers. At an AAAS conference of minority and women scientist roster-makers and roster-users in 1974,* participants delineated eight distinct purposes which rosters might serve, depending on the fullness of information included in each. We expect that several of those functions will prove especially significant in the use of this directory, too. For instance, we expect that this directory of handicapped scientists will serve an educational purpose, that it will inform policymakers, administrators, and educators as to the impressive array of accomplishments of handicapped professionals and thereby help to dispel some of the myths about the limitations of handicapped persons. We expect this educational effect to be felt in part also by the handicapped scientists themselves, just as the physicist community, both male and female, was impressed by the richness of experience represented on the pages of the first roster of Women in Physics.

A second set of related purposes this directory may fulfill are those of self identification, communication, organization, and development among the handicapped scientists themselves. Some of the first minority scientists' rosters were compiled in order to facilitate communication among themselves and professional development in their communities, especially enhancement of educational opportunities for the young. We expect to find that handicapped scientists will use this volume in similar ways. The geographical index will permit them to organize around local issues of importance to the handicapped, and the discipline index will enable them to identify colleagues with whom they can work within their scientific societies.

A directory like this, bearing only the briefest information on professional interests and accomplishments, can even be used by those seeking to make appointments to advisory bodies and peer review panels, and by those seeking to include handicapped scientists in their recruitment efforts. To serve well in these respects, a registry rather than a directory is needed, but even a directory may serve as the preliminary tool available to recruiters. And those scientists in this directory who have indicated their willingness to participate in scientific review have agreed to make their professional resumes available to program managers in granting agencies.

We expect - and hope - however, that the most obvious use of this directory will be by school administrators, science educators and university science faculty who will capitalize on the experience of these accomplished scientists to assist them in opening up science education and opportunities to the handicapped. We hope that they will be energetically sought out and used as advisors, counsellors and role models.

The scientists listed in the Resource Directory are willing to consult on a vast array of subjects, including their scientific discipline, science laboratory or curriculum adaptations for handicapped students, architectural or program acces-

*See Brown, Coleman and Posner, Rosters of Minority and Women Professionals, AAAS 1975. That publication makes a distinction among different kinds of rosters, from the relatively simple directory to the full dossiers contained in a professional registry.

sibility, job restructuring, interpretation of legislation regarding the rights of handicapped persons, and personal coping strategies used to obtain their own scientific educations and careers in science. Other persons listed in the Directory are willing to give speeches, answer questions by telephone or in person, serve on committees, make presentations at workshops and symposia at meetings and conventions, or spend time helping individuals and institutions develop solutions to a particular problem. Obviously, not every member is willing or able to undertake all these tasks, but all of them are willing to perform one or more of these types of activities. The code letters accompanying each entry indicate which activity the individual wishes to pursue.

In the past, handicapped scientists in the AAAS Resource Group have consulted with Representatives Olin Teague and John Brademas and Senators Jennings Randolph and Edward Kennedy about legislation concerning handicapped citizens. Some have served on peer review panels for the Bureau of Education for the Handicapped and the National Science Foundation. Many have served on committees to evaluate local school systems or handicapped student access to university programs. One Resource Group member has assisted her employer in developing a van service and ramps which allow her and handicapped colleagues full access to the work setting. She and another scientist have opened opportunities for handicapped science students to receive on-the-job laboratory training through summer work experiences. Others have counselled aspiring handicapped students and their families. There are many more in this book who want to help in similar ways.

This brief summary of activities undertaken by various Resource Group members offers the user of the Directory an idea of the many ways this directory can be employed. The user, we are certain, will be able to think of others.

We caution the users of this volume, however, that listing the names and qualifications of these scientists is only an aid to help them take the first steps of identifying and contacting potential handicapped advisors and collaborators. Users themselves must expect to follow up identification with the usual exploration of needs, interests and capabilities until the user's needs and the handicapped scientist's experience and interests have been matched appropriately. And if users, especially those based in educational systems and universities, and those seeking advice on the employment of handicapped scientists, require extensive advice and assistance from handicapped scientists, they should be prepared to pay consulting fees, honoraria and expenses as they would for any other kind of expertise they hire.

For those who will be working with handicapped scientists for the first time, the AAAS has prepared an accompanying guide, Working with Handicapped Professionals, which contains a great deal of practical advice. It is intended for project and program directors, public agency personnel, educational planners, school administrators, science teachers and professors -- to help them learn as quickly and efficiently as possible what they need to know in order to benefit from the experience and expertise of handicapped scientists and organizations of the handicapped.

HOW TO USE THE DIRECTORY

Directory Format and Explanations of Style

The organization of complex material into meaningful categories always presents problems for compilers and cataloguers. That is not less true in the preparation of this volume. Organization of the Directory presented its compilers and editors with problems of definition and categorization as they sought to make the outcome useful to persons whose needs centered on location, type of handicapping condition, scientific specialty, sex, skills and experience. An explanation of the terms and categories follows. All classifications within the individual directory entries and in the indices were decided upon by the compilers and editors on advice from outside experts where necessary. Each individual entry was sent to the participating scientist for approval prior to publishing, but, to avoid confusion and randomness, were classified according to a format set up by the editors.

ALPHABETICAL LISTING

The Resource Directory of Handicapped Scientists was designed for use in the simplest format possible. The main body of the Directory lists handicapped scientists alphabetically by name. The individual listings are cross-referenced by geographic location, handicapping condition, scientific specialty and sex in the indices.

The following information appears in each individual entry:

Name This is alphabetized in the customary style. To facilitate the user's search for entries, "Mac, Mc" are inserted before "M", and "St." should be considered in its nonabbreviated form of "Saint".

Address and Telephone Number We followed the preference of the individual in listing the business or home address.

Scientific Discipline For standardization, consistency, and ease in use, a format using eleven major categories was chosen, a breakdown of which may be found under the explanation for Index C on page xii. In choosing the particular field headings shown in the listings, a number of variables had to be considered. The actual educational degrees held or to be obtained had to be compared and matched with the equivalent work experience. In some cases, i.e. when some individuals chose new careers, the educational background had to be weighed against work experience in an entirely different field. Occasionally, it had to be decided, for example, where to place someone who teaches science (Education) but who holds major qualifications in the physical sciences (e.g. Chemistry etc.). Generally these decisions were straightforward and the information easily obtained, but in some instances a good deal of extra consideration was involved. In these cases, the individual's scientific and employment background was analyzed from the questionnaire before a decision was made. Sometimes the background was so varied that two or more headings for science categorization were chosen.

Degrees in Field Educational degrees are listed with the highest (most recent) qualification or level of training first, and subsequent educational experience following. Where the individual is currently studying science at

university: *Student* usually implies the undergraduate level; *Graduate Student* or *MS/MA - scientific subject (Cand.)* implies the graduate level; and *PhD - scientific subject (Cand.)* implies that the student is a candidate for the PhD.

Most Recent Position This implies the individual's current job, or if the individual is unemployed, his/her most recent employment position or if a student, his/her part-time or summer employment (where appropriate). Retired scientists, i.e. those no longer actively employed in the work force, have listed their previous job followed by (*retired*). In some cases it was necessary to abbreviate certain words shown in this category because of space limitations. We have endeavored to provide as much information as possible, but where some scientists indicated that their home was the preferred address, the editors exercised discretion as to how much additional professional identification should be published.

Nature of Handicap We tried to be consistent in categorizing the many different descriptions of handicapping conditions. However, as individuals have disparate ways of defining their physical impairments, we have generally respected their wishes and used the terminology they suggested in their questionnaires.

Age Became Disabled Implies just that - i.e. the time of life when the individual became disabled. This datum will prove useful in distinguishing between those individuals handicapped since birth and those who developed disabilities later in life. Those handicapped as adults will not have educational experiences equivalent to those handicapped in childhood. The age at which persons become handicapped often influences coping strategies developed to insure a meaningful education and a successful professional career.

Expertise and Consulting Interests An alphabetical code was developed for the ways in which the individual expressed interest in consulting on a number of issues and his/her specialized knowledge. Only the areas which the participant particularly specified are shown in the listing. An explanation of the code follows:

- A Expertise/special skills in architectural accessibility
- B Expertise/special skills in education for handicapped students
- C Expertise/special skills in science curriculum development
- D Knowledge of accessible public facilities in local area
- E Knowledge of improvisation of aids and equipment useful to the handicapped in education and professional employment
- F Expertise/special skills in manual communication
- G Interest in advising/evaluating science education programs for the handicapped
- H Interest in consulting on laboratory accessibility
- I Interest in acting as peer reviewer on applications for government grants and contracts in scientific fields

- J Interest in acting as role model/advisor to the young
- K Interest in giving talks on professional expertise
- L Interest in giving talks relating to disability
- M Interest in acting as advisor to *high school* science students, professors and teachers
- N Interest in acting as advisor to *college* science students, professors and teachers
- O Interest in acting as advisor to *graduate* science students, professors and teachers
- P Interest in acting as advisor to professional associations
- Q Interest in acting as consultant on scientific expertise
- R Interest in acting as consultant on professional meeting accessibility
- S Interest in acting as consultant on occupational barriers to the handicapped
- T Interest in advising handicapped consumer organizations in areas of *education*
- U Interest in advising handicapped consumer organizations in areas of *legislation*
- V Interest in advising handicapped consumer organizations in areas of *employment*

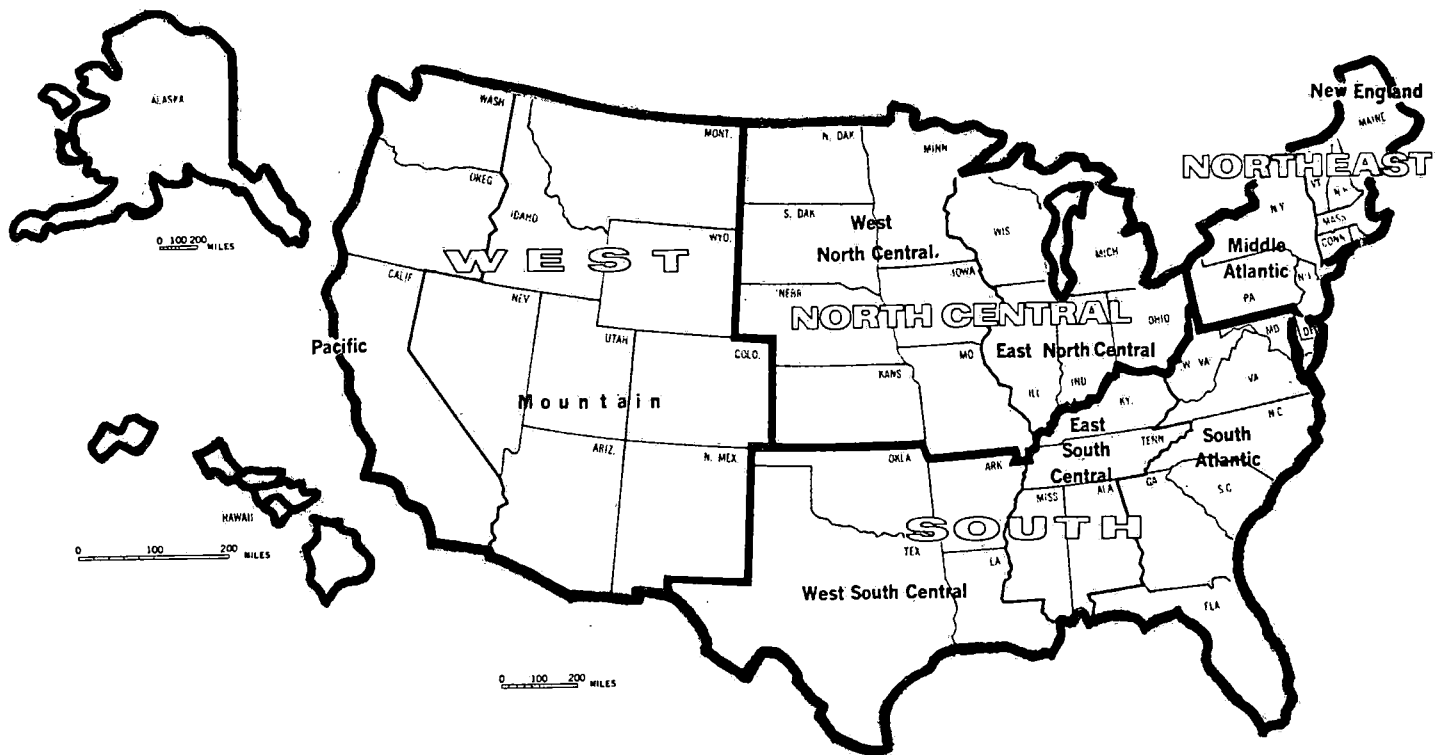

Each entry has been standardized in this format to provide clarity and easy access to the Directory user.

INDICES

The indices are divided into four categories as described below. Each classification contains names listed alphabetically with no further biodata. The Directory user may turn to the main alphabetical listing for more detailed information on each entry.

Index A - Geographical Location

This index was developed in order to facilitate access to the user when searching for an individual or a group of scientists within a particular geographic area of the United States. The entries are categorized under four main regions of the United States - Northeast, South, North Central and West - and a fifth category "Other" which includes Canada and United States residents abroad - as illustrated in the map following. Under each of the five headings, individuals are listed alphabetically by name, followed by his/her state of residence or workplace.

Source: U.S. Bureau of the Census Statistical Abstract of the U.S.:1969 (90th edition)
Washington DC

Index B - Handicapping Condition

This index was developed in order to provide general information about the representation of handicaps in various disciplines and specific information regarding which scientists are best prepared to offer their expertise regarding handicapping conditions.

The assignment of handicapping conditions to the nine categories below was based primarily on etiology. When, however, this approach did not provide adequate information about the handicap, classification was based upon the nature of the impairment. Thus, cerebral palsy was classified as "Neurological (Cerebral)". And yet blindness, whatever the etiology, was classified with "Visually Impaired", with additional classification depending upon whether or not further information was supplied. In some instances, assignment to more than one category was made because of multiple impairments. For example, diabetes was classified as "Organic", yet its sequelae, diabetic retinopathy and neuropathy, were listed under "Visually Impaired" and "Neurological (Cerebral)" respectively. Some classifications may appear arbitrary to the user, but to expand the number of categories further, while perhaps enhancing medical accuracy, would reduce the usefulness of the Directory. Although a uniform system was the basic objective, the methodological rigidity of an etiological format appeared to reduce understanding for those of a nontechnical background. Individuals are listed alphabetically by name under the following categories:

1. AMPUTEE

2. BLIND/VISUALLY IMPAIRED

3. DEAF/HEARING IMPAIRED

4. NEUROLOGICAL (Cerebral)

e.g. Aphasia, Cerebral Palsy, Double Athetosis, Dyslexia, Dystonia Musculorum Deformans, Encephalitis, Epilepsy, Friedreich's Ataxia, Hemiparesis, Hemiplegia, Learning Disability, Multiple Sclerosis, Neuropathy, Parkinson's Disease, Spastic Paralysis (if from birth) Stroke (CVA)*

5. NEUROLOGICAL (Spinal Cord)

e.g. Friedreich's Ataxia, Guillain-Barré Syndrome, Paraparesis, Paraplegia, Polio-caused paralyses, Quadriparesis, Quadriplegia, Spina Bifida, Spinal Muscular Atrophy, Tetraplegia, Werdnig Hoffman's Disease*

6. NEUROMUSCULAR

e.g. Mobius Syndrome, Muscular Dystrophy, Myasthenia Gravis, Myelopathy, Myositis Ossificans Progressiva, Polymyositis, Spasmodic Torticollis

7. ORGANIC DISORDERS

e.g. Allergies, Angina, Arteriosclerosis, Asthma, Atherosclerosis, Burns, Cardiac Disorders, Cystic Fibrosis, Diabetes, Leukemia, Polyarteritis Nodosa, Renal Disease, Rhinosinusitis, Wounds

8. ORTHOPEDIC

e.g. Ankylosis, Arthritis, Club Hands/Feet, Contracted Knees, Dwarf, Hemophilia, Osteogenesis Imperfecta, Osteomyelitis, Rheumatoid Arthritis, Rigid Wrists, Scoliosis

9. SPEECH IMPAIRED

e.g. Harelip/cleft palate, speech dysfluency/stuttering

**Friedreich's Ataxia can be classified under either category. In this index, scientists with this disorder have been placed under "Neurological (Cerebral)".*

Index C - Scientific Specialty

This index was assembled in order for the Directory user to easily identify individuals of a specific scientific specialization. Using a list adapted from that compiled by the National Research Council of the National Academy of Sciences, the scientific disciplines are arranged under ten separate classifications, with an additional category "Other" for identification of disciplines which fall outside science as we have defined it. Individuals are listed alphabetically by name under the following major categories:

- | | |
|----------------------------------|----------------|
| 1. AGRICULTURE/BIOLOGY | 6. ENGINEERING |
| 2. ASTRONOMY/PHYSICS | 7. MATHEMATICS |
| 3. CHEMISTRY | 8. MEDICAL |
| 4. EARTH, ENVIRONMENTAL & MARINE | 9. PSYCHOLOGY |
| 5. EDUCATION | 10. SOCIAL |
| | 11. OTHER |

The following list, adapted from the NRC/NAC Specialties list, shows which disciplines are included in each of the major categories:

1. AGRICULTURE/BIOLOGY

Agronomy, Agricultural Economics, Agriculture-general, Animal Husbandry, Animal Science & Animal Nutrition, Fish & Wildlife, Food Science & Technology, Forestry, Horticulture, Phytopathology, Soils & Soil Science; Anatomy, Biochemistry, Biology-general, Biometrics & Biostatistics, Biophysics, Botany, Cytology, Ecology, Embryology, Entomology, Genetics, Hydrobiology, Immunology, Microbiology & Bacteriology, Molecular Biology, Nutrition and/or Dietetics, Physiology (animal), Physiology (plant), Zoology

2. ASTRONOMY/PHYSICS

Astronomy, Astrophysics; Acoustics, Atomic & Molecular, Electromagnetism, Elementary Particles, Fluids, Nuclear Structure, Optics, Physics-general, Plasma, Solid State, Thermal

3. CHEMISTRY

Agricultural & Food, Analytical, Chemistry-general, Inorganic, Nuclear, Organic, Pharmaceutical, Physical, Polymer, Theoretical

4. EARTH, ENVIRONMENTAL & MARINE

Applied Geol./ Geol. Engr. & Econ. Geol., Atmospheric Dynamics, Atmospheric Physics and Chemistry, Atmospheric Sciences (other), Earth sciences-general, Environmental Sciences-general, Fuel Tech. & Petrol. Engr. Geochemistry, Geodesy, Geomorph. & Glacial Geology, Geophysics, Hydrology, Oceanography, Paleontology, Petrology/Mineralogy, Stratigraphy/Sedimentation, Structural Geology*

5. EDUCATION

Adult Educ. & Extension Educ., Audio-Visual Media, Educ. Admin. & Superv., Educ. Meas. & Stat., Educational Psychology Elementary Education-general, Guid./Couns* & Student Pers., Higher Education, Secondary Education-general, Special Education (gifted, handicapped etc.). Teaching Fields: Agriculture Educ., Industrial Arts Educ., Mathematics Educ., Science Educ., Social Science Educ., Speech Education (speech pathology), Vocational Education*

6. ENGINEERING

*Aeronautical & Astronautical, Agricultural, Biomedical, Ceramic, Chemical, Civil, Computer, Electrical, Electronics, Engineering-general, Engineering Mechanics, Engineering Physics, Fuel Tech. & Petrol. Engr., * Industrial, Materials Science, Mechanical, Metallurgy & Phys. Met. Engr., Mining, Operations Research, Sanitary & Environmental, Systems Design & Systems Science*

7. MATHEMATICS

Algebra, Analysis & Functional Analysis, Applied Mathematics, Computing Theory & Practice, Geometry, Logic, Mathematics-general, Number Theory, Operations Research, Probability & Mathematical Statistics, Topology

8. MEDICAL

Dentistry, Environmental Health, Hospital Administration, Medical Sciences-general, Medical Technology, Nursing, Parasitology, Pathology, Pharmacology, Pharmacy, Psychiatry, Public Health & Epidemiology, Veterinary Medicine

9. PSCYHOLOGY

Clinical, Comparative, Counseling & Guidance, Developmental & Gerontological, Educational,* Experimental, Industrial & Personnel, Personality, Physiological, Psychology-general, Psychometrics, School Psychology, Social*

10. SOCIAL

Anthropology, Area Studies, Communications, Econometrics, Economics, Geography, History of Science, International Relations, Political Science, Public Administration, Social Sciences-general, Sociology, Statistics, Urban & Reg. Planning

11. OTHER

Accounting, Architecture, Business Administration, Journalism, Law & Jurisprudence, Library & Archival Science, Technical Writing

Index D - Sex

This index was developed for those individuals interested in distinguishing between women and men scientists. The entries are arranged by listing the female handicapped scientists alphabetically by name.

**We have classified scientists in these fields on a case by case basis.*

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Founded in 1848, AAAS is the world's leading general scientific society with 125,000 individual members. It is also the world's largest federation of scientific organizations with nearly 300 affiliated societies and academies covering the entire spectrum of the natural and social sciences, engineering, and medicine. Despite its size and complexity, AAAS offers its individual members a voice in the larger scientific community through programs for the expansion and interchange of ideas in science and engineering and in the public understanding and appreciation of science. AAAS membership includes the weekly journal **SCIENCE** and the opportunity to participate in one of the 21 AAAS Sections of the Association that embrace the basic fields of science and engineering. Members also take part in programs that contribute toward the solution of problems affecting not only the scientific community but society as a whole.

For further information about AAAS, write

AAAS Membership
Department
1515 Massachusetts Ave., N.W.
Washington, D.C. 20005

AAAS provides for the interchange of information of concern to scientists and to society through:

- **SCIENCE**, the weekly magazine which carries definitive articles and up-to-date reports on topics and issues in and about the scientific world.
- the Annual National Meeting which provides a forum for the presentation of symposia and lectures on recent developments in science, and informed discussions on policy issues that affect society as a whole.
- the quarterly review magazine **SCIENCE BOOKS & FILMS**, the Science Book Lists, and Science for Society which review or annotate and list the best science books, films and related articles currently available.
- other publications such as the Science Compendia Series which deal with critical topics (energy, food, population, materials, electronics), the AAAS Selected Symposia Series and the AAAS Audiotape Series (from the Annual National Meeting) which offer a broad perspective in the fields of science and technology, and books and reports on special topics (such as scientific freedom and responsibility and research funding in the public and private sectors).

AAAS supports various programs and activities that are concerned with national and international science policy, education, and employment opportunities by:

- giving national and regional policy-makers the science facts they need through special seminars and the Congressional Fellows Program.
- providing forums on such problems as scientific freedom and responsibility, the legal and technical implications of weather modification, the implications of energy development in the West, and more.
- relaying reliable science information to the news media.
- promoting public understanding of science and improving science curricula in the schools.
- improving international cooperation among scientists through innovative ventures like the new inter-American trilingual journal **INTERCIENCIA**.
- expanding the opportunities available to minorities, women, and the handicapped in all fields of science.
