TO: Susan M. Nix

FROM: Rebecca L. Anderson
Office of Legislative Affairs

SUBJECT: Acknowledgments for Signing Ceremony

1. This ceremony will be broadcast via satellite to the employees of the Superconducting Super Collider Laboratory -- they should be acknowledged;
2. Some staff from the SSC Laboratory will be in attendance tomorrow and should be acknowledged as a group;
3. Members of the ^{Congress} both the House and Senate (approx 10) should be commended for their good work.

I think that does it -- the rest of the audience consists of Department of Energy Staff, Representatives from the Business Community and Senior White House staff.

Let me know if you have any questions. Thanks a lot.

PRESIDENTIAL REMARKS: ENERGY/WATER BILL-SIGNING
~~ROSE GARDEN~~ *Roosevelt Room*
OCTOBER 2, 1992
8:00 AM

Good morning, everyone. Thank you all for coming.

(Acknowledgments)

We are here today to take another step into the future -- an American future that offers opportunities unprecedented in our country's history. The task before us is to grasp those opportunities, and to make them available for every American.

The great question today is not whether America will compete in the new century; you and I know we will. The question is how we compete, how we remain the world's leader -- not only militarily and politically, but economically as well.

In large measure, the answer lies in pushing back the frontiers of human knowledge, so that the daring ideas and dreams of this decade become the commonplace reality of the next.

We have part of that answer before us this morning -- a cornerstone of our agenda to keep America at the forefront of science.

The appropriations bill I am about to sign ensures that one of the greatest adventures in human knowledge will continue.

The Superconducting Supercollider is to basic research what the Louvre is to Western art. Already it has brought together the finest scientific minds in the world -- academic scientists, industrial technologists, and laboratory researchers -- a

collection of talent and brainpower not seen since the great research projects of World War Two.

In the short term, the Superconducting Supercollider will mean jobs -- at least 7000 first-tier jobs across the country. More than 19,000 contracts have been awarded to businesses and universities. I am especially pleased by the participation of those small businesses from 40 states who will help build the SSC.

Ⓢ

In the longer term, the tangible benefits of the SSC will be felt by every American. Time and again, history has shown that advances in abstract knowledge have the most practical consequences. The work done with the SSC will bear fruit in new industries / new jobs / new breakthroughs in medicine, chemicals, transportation, electronics ... the list stretches into fields of knowledge we can only imagine today.

Ten days from now we will mark the 500th anniversary of a dramatic landfall -- the moment when Christopher Columbus set foot in the New World. His spirit of fearless exploration survives. Today Americans set sail not for new continents but for new ideas -- not for new passageways but for new ways of knowing. Our frontier is the human imagination. Our vessel is the supercollider.

I believe that the bill I am about to sign shows us that we have reached a consensus -- about the supercollider, and about the future. I thank all of you here today who share our commitment. With your help and faith, we will ensure that

America remains what Emerson called it 150 years ago -- "the country of tommorrow."

Thank you and God bless you. I will now sign the appropriations bill.

SECTION: NATIONAL NEWS; Section B; Page 5

LENGTH: 650 words

HEADLINE: ELECTION '92: THE REPUBLICAN CONVENTION 'America's best days . . . are just ahead,' Reagan tells delegates

KEYWORD: presidents; politics; elections; conventions; speeches

... America's best days are yet to come. Our proudest moments are yet to be. Our most glorious achievements are just ahead. America remains what Emerson called her 150 years ago, "the country of tomorrow." What a wonderful description and how true. And yet tomorrow might never have happened had we lacked the courage in the 1980s to chart ...
