THE WHITE HOUSE

Office of the Press Secretary

For Immediate Release

April 20, 1989

REMARKS BY THE PRESIDENT
AND VICE PRESIDENT
DURING SIGNING CEREMONY FOR
THE SPACE COUNCIL EXECUTIVE ORDER

The Vice President's Office
The Old Executive Office Building

1:08 P.M. EDT

THE PRESIDENT: Well, to the members of Congress here and members of the Joint Chiefs, distinguished guests, thank you. It's a great pleasure to be here on an occasion of this nature. And I want to thank all of you for being here. You're helping to fulfill a promise that I made 18 months ago in Huntsville, Alabama -- at the George C. Marshall Space Flight Center.

I pledged then and I'm proud now to reestablish the National Space Council. I've asked Vice President Quayle to serve as chairman. Under his able leadership, I'm confident that the Space Council will bring coherence and continuity and commitment to our efforts to explore, study and develop space. I look to the Council to coordinate our civil, military and commercial efforts. We must establish a permanent manned presence in space by building the space station, Freedom. We must encourage private initiatives in investment, and we must ensure our national security through effective defense activities in space.

You know, when people talk about space exploration, what it represents to us, in this country -- some say that it captures the American imagination. But it's much more than that. Our efforts in space unleash the imagination.

And 20 years ago, an entire generation of Americans was inspired by the space program. We must continue on the path we've blazed in earlier decades with a renewed dedication.

Space is vitally important to our nation's future and, I would add, to the quality of life here on Earth. And it offers a technological frontier, creating jobs for tomorrow. And space programs inspire an interest in math and science, engineering in young people -- knowledge so important for a competitive future. Space offers us the chance to unlock secrets billions of years old and billions of light years away. Space is the manifest destination of a new generation and a new century.

Mr. Vice President, I plan to sign this Executive Order with one objective in mind -- to keep America first in space, and it's only a matter of time before the world salutes the first men and women on their way outward into the solar system. All of us want them to be Americans.

And now I'd like to ask the Vice President to say a few words, and then I'll be honored to sign this declaration.

THE VICE PRESIDENT: Thank you very much, Mr. President, and welcome back to your former office. It's about 100 days ago, a little less, that you were here to witness the official signing of the desk, of the Vice President's desk, and we welcome you back today as you establish the Space Council.

I certainly look forward to getting involved with the

MORE

Space Council, working with the members of Congress to develop a coherent space policy and space strategy for this country.

Space is certainly the frontier -- it is a frontier that we understand and we're going to be there. Space is important to us from an economic point of view, from a national security point of view, and certainly from a point of view of technology.

So, Mr. President, we take your charge with a great deal of seriousness. We will be working with all deliberation and cooperation with members of Congress and the space community, that we will work and present a very good space policy and strategy for the future of this nation.

Thank you very much.

(The Executive Order is signed.)

**REMARKS: SIGNING CEREMONY
 SPACE COUNCIL EXECUTIVE ORDER
 THURSDAY, APRIL 20, 1989
 VICE PRESIDENTIAL OFFICE
 1:05 P.M.**

**THANK YOU. IT IS A GREAT PLEASURE TO BE WITH YOU
TODAY, ON AN OCCASION LIKE THIS.**

- 2 -

I WANT TO THANK ALL OF YOU, FOR BEING HERE. YOU'RE HELPING ME FULFILL A PROMISE I MADE ALMOST 18 MONTHS AGO, IN HUNTSVILLE, ALABAMA -- AT THE GEORGE C. MARSHALL SPACE FLIGHT CENTER. I PLEDGED THEN -- AND I'M PLEASED AND PROUD NOW -- TO REESTABLISH THE NATIONAL SPACE COUNCIL.

I HAVE ASKED VICE PRESIDENT QUAYLE TO SERVE AS CHAIRMAN.

- 3 -

UNDER HIS ABLE LEADERSHIP, I'M CONFIDENT THAT THE SPACE COUNCIL WILL BRING COHERENCE, CONTINUITY, AND COMMITMENT TO OUR EFFORTS TO EXPLORE, STUDY, AND DEVELOP SPACE.

I LOOK TO THE COUNCIL TO COORDINATE OUR CIVIL, MILITARY, AND COMMERCIAL EFFORTS.

- 4 -

WE MUST ESTABLISH A PERMANENT MANNED PRESENCE IN SPACE, BY BUILDING THE SPACE STATION FREEDOM. WE MUST ENCOURAGE PRIVATE INITIATIVES AND INVESTMENT. AND WE MUST ENSURE OUR NATIONAL SECURITY, THROUGH EFFECTIVE DEFENSE ACTIVITIES IN SPACE. YOU KNOW, WHEN PEOPLE TALK ABOUT SPACE EXPLORATION -- WHAT IT REPRESENTS TO US, IN THIS COUNTRY -- SOME SAY IT CAPTURES THE AMERICAN IMAGINATION. BUT IT'S MORE THAN THAT. OUR EFFORTS IN SPACE UNLEASH THE IMAGINATION.

- 5 -

TWENTY YEARS AGO, AN ENTIRE GENERATION OF AMERICANS WAS INSPIRED BY THE SPACE PROGRAM. WE MUST CONTINUE ON THE PATH WE'VE BLAZED IN EARLIER DECADES -- WITH RENEWED DEDICATION.

SPACE IS VITALLY IMPORTANT TO OUR NATION'S FUTURE, AND THE QUALITY OF LIFE HERE ON EARTH. IT OFFERS A TECHNOLOGICAL FRONTIER, CREATING JOBS FOR TOMORROW.

- 6 -

AND SPACE PROGRAMS INSPIRE AN INTEREST IN MATH, SCIENCE, AND ENGINEERING IN YOUNG PEOPLE -- KNOWLEDGE SO IMPORTANT FOR A COMPETITIVE FUTURE.

SPACE OFFERS US THE CHANCE TO UNLOCK SECRETS BILLIONS OF YEARS OLD, AND BILLIONS OF LIGHT YEARS AWAY. SPACE IS THE MANIFEST DESTINY OF A NEW GENERATION -- AND A NEW CENTURY.

- 7 -

MR. VICE PRESIDENT, I SIGN THIS EXECUTIVE ORDER WITH ONE OBJECTIVE IN MIND: TO KEEP AMERICA FIRST IN SPACE. IT IS ONLY A MATTER OF TIME BEFORE THE WORLD SALUTES THE FIRST MEN AND WOMEN ON THEIR WAY OUTWARD INTO THE SOLAR SYSTEM. ALL OF US WANT THEM TO BE AMERICANS.

PRESIDENTIAL REMARKS: SIGNING CEREMONY
 SPACE COUNCIL EXECUTIVE ORDER
 THURSDAY, APRIL 20, 1989
 [PLACE]
 [TIME]

Thank you. It is a great pleasure to be with you today, on an occasion like this. (~~← You know, one of my staff just told me that space is the "final frontier." And I spent the last two years thinking the final frontier was New Hampshire...)~~)

I want to thank all of you, for being here. You're helping me fulfill a promise I made almost 18 months ago, in Huntsville, Alabama -- at the George ^G Marshall Space ^{Flight} Center. I pledged then -- and I'm pleased and proud now -- to reestablish the National Space Council.

I have asked Vice President Quayle to serve as Chairman. Under his able leadership, I'm confident that the Space Council will bring coherence, continuity, and commitment to our efforts to explore, study, and develop space.

I look to the Council to coordinate our civil, military, and commercial efforts. We must establish a permanent manned presence in space, by building the Space Station Freedom. ^{we must} encourage private initiatives and investment. ^{we must} and ensure our

^{we must}

national security, through effective defense activities in space.

You know, when people talk about space exploration -- what it represents to us, in this country -- some say it captures the American imagination. But it's more than that. Our efforts in space unleash the imagination.

Twenty years ago, an entire generation of Americans was inspired by the space program. We must continue on the path we've blazed in earlier decades -- with renewed dedication.

Space is vitally important to our nation's future, and the quality of life here on earth. It offers a technological frontier, creating jobs for tomorrow. And space programs inspire an interest in math, science, and engineering in young people -- knowledge so important for a competitive future.

Space offers us the chance to unlock secrets billions of years old, and billions of light years away. Space is the manifest destiny of a new generation -- and a new century.

Mr. Vice President, I sign this Executive Order with one objective in mind: to keep America first in space. It is only a matter of time, before the world salutes the first men and women on their way outward, into the solar system. All of us want them to be Americans.

These are minor punctuation changes
from Jim Cicconi. The President's changes
are on their way.

THE WHITE HOUSE

WASHINGTON

April 18, 1989

MEMORANDUM FOR CHRISS WINSTON

FROM:

ROGER B. PORTER *RBP*

SUBJECT:

Presidential Remarks: Signing of Space Council Executive Order

The draft remarks for the signing of the National Space Council Executive order should go over well at the ceremony.

We have a couple minor editorial suggestions which we think will strengthen the remarks. We recommend that the third paragraph on the first page be eliminated. To imply that the President did not realize space was the "final frontier" until one of his staff just told him is inappropriate and talking about the New Hampshire primary is not presidential.

In the fourth paragraph on page one the correct title is the George C. Marshall Space Flight Center. The center is most commonly referred to as the "Marshall Space Flight Center". We suggest the President refer to it as such.

The second paragraph on page three is a bad joke and should be eliminated. This remark is inappropriate, given the serious questions surrounding the space commercialization issue. We strongly recommend this paragraph be eliminated.

cc: James W. Cicconi

PRESIDENTIAL REMARKS: SIGNING CEREMONY
 SPACE COUNCIL EXECUTIVE ORDER
 THURSDAY, APRIL 20, 1989
 [PLACE]
 [TIME]

Thank you. It is a great pleasure to be with you today, on an occasion like this.

((You know, last month I asked Millie if she was interested in being a Space Dog. She looked at me for a moment -- sort of a pregnant pause... but no go. I think she was overcome by the gravity of the situation...))

[I can see why. One of my staff just told me that space is the "final frontier." And I spent the last two years thinking the final frontier was New Hampshire...)]

✓ I want to thank all of you, for being here. You're helping me fulfill a promise I made almost 18 months ago, in Huntsville, Alabama -- at the George Marshall Space ^{C.} ^{FLIGHT} Center. Refer to as "Marshall SPACE FLIGHT CENTER".

I pledged then -- and I'm pleased and proud now -- to reestablish the National Space Council. I have asked Vice President Quayle to chair this council -- and to work with the

heads of key departments -- to reassert America's preeminence in space.

With the Vice President's leadership, I'm confident that the Space Council will bring coherence, continuity, and commitment to our efforts -- and give voice and leadership to a great American ambition.

You know, when people talk about space exploration -- what it represents to us, in this country -- some say it captures the American imagination. I disagree.

Shared national efforts like the space program unleash the imagination. They set it free.

Twenty years ago, an entire generation of Americans was inspired by our efforts in space. Today, our commitment to lead in space needs restatement and focus. We must continue on the path we've blazed in earlier decades, with a renewed sense of direction.

Space is vitally important to our nation's future -- our national security, our continued economic growth, and the quality of life here on earth. It offers a technological frontier, creating jobs for tomorrow's labor market. And space programs

inspire an interest in math, science, and engineering in young people, so important for a competitive future.

~~((You know, I read a lot about the commercialization of space. But it's important that we don't go too far. Already, every time I go out, I see so many signs that say, "Space for Rent." Who owns this stuff, anyway?))~~

There was a time when the thought of putting a man into space demanded a great leap of faith. Now we make those leaps all the time. We must set our sights ever higher.

Space offers us the chance to unlock secrets billions of years old, and millions of miles away. In space, man is no accidental tourist. Space is our manifest destination -- in every direction. It means a universe of infinite possibilities, limited only by our will to imagine.

Mr. Vice President, I sign this Executive Order as one small step, to renew America's leadership in space. I look to you and the Space Council, to establish the right goals; pick up the pace; and keep America first in space.

PRESIDENTIAL REMARKS: SIGNING CEREMONY
 SPACE COUNCIL EXECUTIVE ORDER
 THURSDAY, APRIL 20, 1989
 [PLACE]
 [TIME]

Thank you. It is a great pleasure to be with you today, on an occasion like this.

((You know, last month I asked Millie if she was interested in being a Space Dog. She looked at me for a moment -- sort of a pregnant pause... but no go. I think she was overcome by the gravity of the situation...))

I can see why. One of my staff just told me that space is the "final frontier." And I spent the last two years thinking the final frontier was New Hampshire...))

I want to thank all of you, for being here. You're helping me fulfill a promise I made almost 18 months ago, in Huntsville, Alabama -- at the George Marshall Space Center.

I pledged then -- and I'm pleased and proud now -- to reestablish the National Space Council. I have asked Vice President Quayle to chair this council -- and to work with the

heads of key departments -- to reassert America's preeminence in space.

With the Vice President's leadership, I'm confident that the Space Council will bring coherence, continuity, and commitment to our efforts -- and give voice and leadership to a great American ambition.

You know, when people talk about space exploration -- what it represents to us, in this country -- some say it captures the American imagination. I disagree.

Shared national efforts like the space program unleash the imagination. They set it free.

Twenty years ago, an entire generation of Americans was inspired by our efforts in space. Today, our commitment to lead in space needs restatement and focus. We must continue on the path we've blazed in earlier decades, with a renewed sense of direction.

Space is vitally important to our nation's future -- our national security, our continued economic growth, and the quality of life here on earth. It offers a technological frontier, creating jobs for tomorrow's labor market. And space programs

inspire an interest in math, science, and engineering in young people, so important for a competitive future.

((You know, I read a lot about the commercialization of space. But it's important that we don't go too far. Already, every time I go out, I see so many signs that say, "Space for Rent." Who owns this stuff, anyway?))

There was a time when the thought of putting a man into space demanded a great leap of faith. Now we make those leaps all the time. We must set our sights ever higher.

Space offers us the chance to unlock secrets billions of years old, and millions of miles away. In space, man is no accidental tourist. Space is our manifest destination -- in every direction. It means a universe of infinite possibilities, limited only by our will to imagine.

Mr. Vice President, I sign this Executive Order as one small step, to renew America's leadership in space. I look to you and the Space Council, to establish the right goals; pick up the pace; and keep America first in space.

PRESIDENTIAL REMARKS AT THE
SPACE COUNCIL EXECUTIVE ORDER SIGNING CEREMONY

We are here today to inaugurate one of the most important undertakings of this Administration -- the creation of a National Space Council. By signing this Executive Order, we will fulfill a promise made to the American people almost 18 months ago at the George C. Marshall Space Center in Huntsville, Alabama. I pledged to reestablish a council, chaired by the Vice-President and located here in the White House, that would lead America's efforts to explore, study, and develop space.

As I said [then] "In very basic ways, our exploration of space defines us as a people -- our willingness to take great risks for great rewards, to challenge the unknown, to reach beyond ourselves to strive for knowledge and innovation and growth. Our commitment to leadership in space is symbolic of the role we seek in the world."

Nearly thirty years ago, President Kennedy set a goal for the United States to use our collective talents and energy to land a man on the moon by the end of that decade. He challenged our nation to be first in exploration of space, first in manned space flight, first in development of space science and technology and its application here on earth.

We have made great strides in these past thirty years -- the Apollo moon landings, unmanned exploration of the outer reaches of our solar system, and building the space shuttle all testify to the diversity and ingenuity of our efforts. Even in the face of tragedy resulting from the risks inherent in fulfilling our potential, America has shown that we can and will pick ourselves up by the bootstraps and carry on to even greater accomplishments.

Today we face a renewed challenge in space. As a nation, I believe we must continue on the path we have blazed -- with a sense of restored dedication. Space is critically important to our nation's future, our national security, our continued economic growth, and the quality of life here on Earth.

Space offers us a frontier to expand human activity and scientific research. We must preserve and develop our competitive edge to ensure there will be a bright future for young Americans. Space means jobs in high technology areas that will constitute tomorrow's labor market. Our activities in space also lead to the development of new technologies like the personal computer that become available for our everyday use.

Mr. Vice President, your challenge as Chairman of the Space Council is to develop and recommend to me space goals, and the strategies for achieving them, that are worthy of this great nation. You and

the Council must examine the fundamental questions and goals of our space policy and develop recommendations in three areas:

15-
goals:
(3)

→ -- In our civil space program we must lay plans for the next century for manned and unmanned exploration, for building the Space Station Freedom to achieve a permanent manned presence in space, and for developing and applying the products of space science and technologies for the nation's benefit. We must continue America's preeminence in manned space flight through a balanced and flexible space transportation system that includes a safe and sustainable flight rate for the Space Shuttle. Continuing our leadership in space, we must at the same time strive to foster international cooperation in space programs.

-- In the area of commercial space, the Council's mission is to recommend ways to coordinate all government activities to nurture and encourage private sector initiatives in space. We must not only encourage private investment in space, but also foster efforts to harness America's enormous creativity and productivity to create new research and manufacturing opportunities.

-- Our national security also depends upon a strong and effective space policy. We must have adequate space systems to ensure America's freedom of action in space. Our space activities

must be coordinated to provide support for national defense activities in space.

These will be tough challenges. In meeting them we must use every effort to ensure that America will remain first in space. As President Kennedy said when he challenged the Nation to begin the Apollo moon mission, "For while we cannot guarantee that we shall one day be first, we can guarantee that any failure to make this effort will make us last. We take an additional risk by making it in full view of the world, but ... this very risk enhances our stature when we are successful. But this is not merely a race. Space is open to us now.... We go into space because whatever mankind must undertake, free men must fully share."

Mr. Vice President, I am confident that under your leadership, and with the active cooperation of all its members, the Space Council will shape America's activities in space to meet these enormous challenges. I sign this Executive Order as the first step toward fulfilling my pledge to renew America's space leadership.

inspire an interest in math, science, and engineering in young people, so important for a competitive future.

((You know, I read a lot about the commercialization of space. But it's important that we don't go too far. Already, every time I go out, I see so many signs that say, "Space for Rent." Who owns this stuff, anyway?))

There was a time when the thought of putting a man into space demanded a great leap of faith. Now we make those leaps all the time. We must set our sights ever higher.

It is only a matter of time - and a short time at that - before Space Station Freedom will be a routine stop for shuttles taking researchers and supplies back and forth. And it is only a matter of some time thereafter that we will be thrilled by the bravery of the first men and women on their way outward into the solar system. You and I and all of us want them to be Americans.

4

Space offers us the chance to unlock secrets billions of years old, and millions of miles away. In space, man is no accidental tourist. Space is our manifest destination -- in every direction. It means a universe of infinite possibilities, limited only by our will to imagine.

Mr. Vice President, I sign this Executive Order as one small step, to renew America's leadership in space. I look to you and the Space Council, to establish the right goals; pick up the pace; and keep America first in space.

PRESIDENTIAL REMARKS:

SIGNING CEREMONY
SPACE COUNCIL EXECUTIVE ORDER
THURSDAY, APRIL 20, 1989
[PLACE]
[TIME]

Thank you. It is a great pleasure to be with you today, on an occasion like this.

((You know, last month I asked Millie if she was interested in being a Space Dog. She looked at me for a moment -- sort of a pregnant pause... but no go. I think she was overcome by the gravity of the situation...))

I can see why. One of my staff just told me that space is the "final frontier." And I spent the last two years thinking the final frontier was New Hampshire...))

I want to thank all of you, for being here. You're helping me fulfill a promise I made almost 18 months ago, in Huntsville, Alabama -- at the George Marshall Space Center.

I pledged then -- and I'm pleased and proud now -- to reestablish the National Space Council. I have asked Vice President Quayle to chair this council -- and to work with the

heads of key departments -- to reassert America's preeminence in space.

With the Vice President's leadership, I'm confident that the Space Council will bring coherence, continuity, and commitment to our efforts -- and give voice and leadership to a great American ambition.

You know, when people talk about space exploration -- what it represents to us, in this country -- some say it captures the American imagination. I disagree.

Shared national efforts like the space program unleash the imagination. They set it free.

Twenty years ago, an entire generation of Americans was inspired by our efforts in space. Today, our commitment to lead in space needs restatement and focus. We must continue on the path we've blazed in earlier decades, with a renewed sense of direction.

Space is vitally important to our nation's future -- our national security, our continued economic growth, and the quality of life here on earth. It offers a technological frontier, creating jobs for tomorrow's labor market. And space programs

inspire an interest in math, science, and engineering in young people, so important for a competitive future.

((You know, I read a lot about the commercialization of space. But it's important that we don't go too far. Already, every time I go out, I see so many signs that say, "Space for Rent." Who owns this stuff, anyway?))

There was a time when the thought of putting a man into space demanded a great leap of faith. Now we make those leaps all the time. We must set our sights ever higher.

Space offers us the chance to unlock secrets billions of years old, and millions of miles away. In space, man is no accidental tourist. Space is our manifest destination -- in every direction. It means a universe of infinite possibilities, limited only by our will to imagine.

Mr. Vice President, I sign this Executive Order as one small step, to renew America's leadership in space. I look to you and the Space Council, to establish the right goals; pick up the pace; and keep America first in space.
