MEMORANDUM FOR THE PRESIDENT

THROUGH: DAVID DEMAREST
TONY SNOW

FROM: ROBERT SIMON *RS*

SUBJECT: FIRST ENCOUNTERS CONTEST

I. SUMMARY

On Wednesday, February 12, in Manchester, N.H., you will give brief remarks to some of the engineering teams of the FIRST Encounters contest, a private sector effort to motivate high school students to pursue science and technology careers.

Your remarks (4 minutes, on cards) will be taped and shown to the 1,200 contest spectators.

II. DISCUSSION

U.S. FIRST is a new national non-profit organization whose purpose is to support the National Education Goal of making U.S. students first in the world in math and science. The FIRST Encounters contest is a engineering competition staged as a sporting event. Engineers from major U.S. corporations, along with student assistants, will build robotic vehicles to compete against each other. Dr. Bromley will be one of the judges.

You will meet some of the teams and see a preview of the contest, which takes place on Feb. 13-14.

PRESIDENTIAL REMARKS: FIRST ENCOUNTERS CONTEST
MANCHESTER, N.H.
WEDNESDAY, FEBRUARY 12, 1992

First my thanks to Dean Kamen, the brains behind this effort. He's given me quite an education, and from what I've seen here, I wish I could be at the inaugural "FIRST Encounters" contest. By creating an imaginative new partnership for learning between industry and education, you're taking a big step forward in meeting our goal of making the U.S. Number 1 in science education.

In the 21st century, we will face a technology race the likes of which we've never seen. But competition makes us strong. American workers can out-think, out-produce, out-compete anybody anywhere. Competition made America Number 1, and competition will keep us there. It compels us to do our best. And it stimulates the desire to win.

How America does at the technology race's finish line depends on how we prepare the next generation for the starting line. To teach this new generation, my administration has put the federal government's scientific brainpower and labs to work teaching high school students about real-life science.

Our National Technology Initiative will create new partnerships to move technology out of the labs and into the marketplace. And our America 2000 education strategy is revolutionizing our nation's schools. Add it all up, and new

technology means new products, new jobs, and new economic growth.

When I put forth as one of six National Education Goals making America's students first in science and math, I knew it was a tough challenge. But I knew that challenge would bring out the best in all of us: our teachers, our students, our industries, and our parents.

I'm sure the competition here in Manchester will be fierce. But I also know that no matter who wins, no one will lose. "How you play the game" is what matters here. You'll learn about engineering, but you'll also experience the joy of learning.

This contest may not get as much hype as the Super Bowl, but it's a lot more important to our future. Thanks to all of you for showing us the way -- New Hampshire-style.

PRESIDENTIAL REMARKS: FIRST ENCOUNTERS CONTEST
MANCHESTER, N.H.
WEDNESDAY, FEBRUARY 12, 1992

Greetings to all. Thanks to Dean Kamen, the brains behind U.S. FIRST. He's given me quite an education today, and from what I've seen here, I wish I could be at the inaugural "FIRST Encounters" contest.

By presenting engineering as a sporting event, and by creating an imaginative new partnership for learning between industry and education, you're taking a big step forward in meeting our goal of making the U.S. first in science education.

In the 21st century, we will face a technology race the likes of which we've never seen. How can we make America first? Not by isolating ourselves, or hiding behind walls of protection. We will make America first with the same approach as U.S. FIRST: competition. Competition makes us strong. It compels us to do our best. And competition stimulates the desire to win.

How America does at the technology race's finish line depends on how we prepare the next generation for the starting line -- whether they appreciate the excitement, the challenge, and the rewards of a career in science and technology.

When I put forth as one of six National Education Goals making America's students first in science and math, I knew it was a tough challenge. But I knew that challenge would bring out

the best in all of us: our teachers, our students, our industries, and our parents.

FIRST Encounters draws on two of America's greatest resources: our pioneering spirit, and the competitiveness of our industries. If we want the next generation to learn science and math, we've got to make learning exciting -- even fun. That's what "U.S. FIRST" is all about and what this contest is all about.

I'm sure the competition here will be fierce. But I also know that no matter who wins, no one will lose. The old saying is true: "how you play the game" is what matters here. You'll learn about engineering, but you'll also experience the joy of learning.

This contest may not get as much hype as the Super Bowl, but it's a lot more important to our future. The winners may not be asked to tape an ad for Disney World, \\ but I'll do you one better. I'd like the winners to come visit me at the White House.

Making the U.S. first can't be just a slogan. It's got to be a way of life. Competition made America Number 1, and competition will keep us there. So thanks to all of you for showing us the way -- New Hampshire-style.

the best in all of us: our teachers, our students, our industries, and our parents. ⁴ ² And the way to reach the Nat'l Ed. Goals is thru Am. 2000 (Ed.)

FIRST Encounters draws on two of America's greatest resources: our pioneering spirit, and the competitiveness of our industries. If we want the next generation to learn science and math, we've got to make learning exciting -- even fun. That's what "U.S. FIRST" is all about and what this contest is all about.

I'm sure the competition here will be fierce. But I also know that no matter who wins, no one will lose. The old saying is true: "how you play the game" is what matters here. You'll learn about engineering, but you'll also experience the joy of learning.

This contest may not get as much hype as the Super Bowl, but it's a lot more important to our future. The winners may not be asked to tape an ad for Disney World, \ \ but I'll do you one better. I'd like the winners to come visit me at the White House.

Making the U.S. first can't be just a slogan. It's got to be a way of life. Competition made America Number 1, and competition will keep us there. So thanks to all of you for showing us the way -- New Hampshire-style.

PRESIDENTIAL REMARKS: FIRST ENCOUNTERS CONTEST
MANCHESTER, N.H.
WEDNESDAY, FEBRUARY 12, 1992

Greetings to all. Thanks to Dean Kamen, the brains behind U.S. FIRST. He's given me quite an education today, and from what I've seen here, I wish I could be at the inaugural "FIRST Encounters" contest.

By presenting engineering as a sporting event, and by creating an imaginative new partnership for learning between industry and education, you're taking a big step forward in meeting our goal of making the U.S. first in science education.

In the 21st century, we will face a technology race the likes of which we've never seen. How can we make America first? Not by isolating ourselves, or hiding behind walls of protection. We will make America first with the same approach as U.S. FIRST: competition. Competition makes us strong. It compels us to do our best. And competition stimulates the desire to win.

How America does at the technology race's finish line depends on how we prepare the next generation for the starting line -- whether they appreciate the excitement, the challenge, and the rewards of a career in science and technology.

When I put forth as one of six National Education Goals making America's students first in science and math, I knew it was a tough challenge. But I knew that challenge would bring out

(Logical order)

the best in all of us: ³our teachers, ²our students, ¹our industries, ⁴and our parents.
