THE WHITE HOUSE  
WASHINGTON

JULY 29, 1992

MEMORANDUM FOR THE PRESIDENT

FROM: STEVEN PROVOST

SUBJECT: SUPERCONDUCTING SUPER COLLIDER

I. SUMMARY

On Thursday, July 30, at 10:35 a.m., you will deliver remarks (16 minutes, on prompter) to an audience of approximately 1500 people -- employees and local Texas officials associated with the Super Conducting Super Collider project in Waxahachie.

II. DISCUSSION

The broad-based theme of your remarks focuses on the economy of the 21st Century. Additionally, you highlight the contributions the Super Collider project will have toward advances in science, education and trade.

(Provost)

Presidential Remarks  
Super Collider Event  
Dallas, TX  
30 September 1992  
10:30 a.m.

Thank you, and good morning everyone.

(Acknowledgements)

Here today are some of the finest scientific minds in the entire world. It is an honor and a pleasure to be with you.

As much as any state, Texas is a land of old and new -- a place where "boot" means something you wear on your feet, and what you do to turn on your computer each morning. And so I come here to talk to you about what we need to do, to prepare for the economy of the 21st Century.

Listening to all the talk these days about our economy reminds me of the freshman who walked onto the field over at SMU for his first football practice. He told the coach: "Look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "Kid, everybody has a weakness, what's yours?" And the freshman said, "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to work for the other political party. Sure we have our problems, our challenges, but let's not forget a few facts. We are the world's largest economy -- and no

other nation sells more products outside its borders. Inflation is the lowest in two decades ... and if you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, the "Dream Team" of workers can be found right here -- in the USA.//

The question today is not can America compete? We know we can. The question is -- how do we stay number one, and share our prosperity with more Americans?

Right now a debate is raging. On one side are people who are fearful of the future. They don't trust our people. They only trust government to hang on to what we have today.

I take a different approach. I don't fear the future. I embrace it. I believe America can win the new economic Olympics, if our government is wise enough to trust our people and get them ready for the big event.

Today, our economy is growing -- but nowhere near fast enough. We need action now, to create jobs for you and your neighbors.

On January 29th, I put forward a specific plan to create new jobs, using tax incentives to encourage businesses to hire new workers and help Americans who want to buy a first home. The simple fact is: I trust you to spend your money and get the economy moving.

If my plan was in place, it would create almost 15,000 new jobs a day -- over a half a million jobs since February.

But Congress took my plan, and sent me back a tax increase -  
- an idea that put government ahead of people. So I vetoed it.  
For 183 days I've waited for Congress to act again. Today I say  
to the Congress, we need those half a million new jobs today.  
Don't hold the American economy hostage to politics. Vote for an  
economic recovery program, and put Americans to work --- now!//

That's what we need to do today. But changes occurring in  
the world's economy are fundamental -- and they demand long-term  
action. As we watch the Olympics on TV this week, we marvel at  
the competitive energy. (I still can't get over the guy who shot  
the arrow to light the flame. How'd you like to do that with a  
hundred million people watching?)

The Olympics are a metaphor for our new economy. Today,  
people in Eastern Europe and China want our computers and cars,  
even our colas. We can fill the need.

Just look south to Mexico, where the border has been opened  
further since 1986. U.S. exports have tripled with Texas  
companies are leading the way.

I'm fighting for a North American trade treaty that will  
increase Mexican demand for Texas fruits, computers, and hundreds  
of other products. Some people look at this new world of trade  
and get scared. They talk protectionism, suggesting we should  
pack our bags before the games begin. I trust American  
companies, and I trust American workers. Our national symbol is  
not the Ostrich, but the Eagle. Let other nations stick their

head in the sand. We will spread our wings and fly to good jobs for you, and your family.//

Our economy has changed in many ways since I staked my first claim in Odessa four decades ago. Back then, you could get a job because of what you could lift with your shoulders. Today a good job depends on what you can fit inside your head.

Think about this: In 1980 ... a man with a college education made an average of \$11,000 more per year than a man with a high school education. By 1990, that gap had increased to \$16,000. And the same thing happened with women.

Knowledge has become the foundation of our economy. Whether our kids will work in the military, the marketplace or on a mainframe computer, what they know will determine what they do with their lives.

So I have proposed -- and I have fought for -- what I call America 2000 program --- to make our grade schools and high schools as great as our colleges. I'm proud of our world dominance in basketball and swimming, but don't you want our kids to do just as well in trigonometry and biology?//

A hundred and fifty years ago, Thomas Edison said "if you build a better mousetrap, the world will beat a path to your door." Today those world-beating mousetraps are advances in computers, biotechnology and material sciences.

New computers mean that in an age when information is king, we can all wear a crown. (We can even get a FAX in our car,

which leads to the question: who wants to get a FAX in their car?)

Advances in biotechnology allow us to cure illnesses that have plagued mankind for generations. Breakthroughs in material science mean that we can build everything from airplanes to cars in ways that will make them faster, stronger and cheaper.

America has always been the cradle of technology -- the best in the world. In the 21st century --- we must make sure that translates into being the best in the marketplace.

So I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, and to improve the National Science Foundation, and to spur the development of biotechnology and supercomputers.

These programs are not a form of "industrial policy" -- they provide the technological leaps that make economic leaps possible. I put my trust in American companies and American workers. But they need incentives to invest in their own research, their own ideas.

So I have proposed -- and I have fought for -- the idea of making permanent the research and experimentation tax credit, to cut the cost of private research by 20 percent. We should understand -- what happens in laboratories today, shows up in your paycheck tomorrow.//

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future -- loyal to our

children. And we can make the investment with no budget busting spending.

The federal government already spends 1.4 trillion of your money every year. So I propose we set some priorities. Cut back on mandatory spending today ... and do away with almost 250 government programs that simply don't work anymore.

((One of my favorite singers is Randy Travis. Randy has a song that says, "Our love would last forever." I'm not sure Randy would say the same thing about a taxpayer-supported federal research program on the mating habits of minks.))

This Superconducting SuperCollider is a big part of my investment in America's future. It is the worlds greatest scientific project, a magnet for scientific geniuses from around the world. Where once we reached for the moon above to explore new frontiers of our universe, soon we will begin to tunnel below to learn about the fundamental question of science --- how our universe began.

It's hard to explain the benefits to a layman like myself. One young scientist calls the Super Collider "the scientific equivalent of that crazy new sport -- bungee jumping." I guess what he means is that when it come to colliding atoms, it's not the experience itself that counts, but what you learn along the way.//

History has shown that pushing technology to ever-higher levels of accomplishment brings immensely practical consequences

--- here for example, a new electronics industry can be born of the discoveries that you make.

Some in Congress disagree. While they talk a good game about investment, they have repeatedly voted to cut the programs I outline today. Now, they've set their sights on the Super Collider. The House last month voted to shut down this project, and the Senate will consider it soon. No one should be under any illusion: savings from killing the Super Collider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year.

If Congress stops this project, they will direct this investment to support organized interests whose support they need in an election year. They will squander taxpayer's money today, rather than invest in our economy tomorrow. Make no mistake, this is a battle between the "patrons of the past," and the "architects of the future."

It may not be popular in all places, but I want to do what's right for America. Today I say: I stand with Texas. I stand with our future. I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries after that, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Today, new frontiers beckon, new discoveries await, new progress lies before us. Our adventure is not to sail the open ocean but rather go to the edge of the universe and see the birth of space. Our vessel is not called the Santa Maria but the Super Collider -- but human imagination is still our compass, and human ingenuity and yearning for progress, our only power.

I believe you can trust the ideas I have outlined to carry our economy to calmer waters. Trust these ideas to change America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.

Presidential Remarks  
SuperCollider Event

30 July 1992  
Waxahatchie, TX

Thank you and good morning everyone.

(Acknowledgements)

As much as any Americans, Texans know how to pick yourself out of the dust and get back in the saddle, to ride and win another day. So I come here this morning to talk a little bit about America's challenges, and how we are going to meet them.

The past four years have been a rough stretch for Robert Ludlum and others who write fiction for a living. Think about it. With all that's been going on in the world -- is there any room left for imagination?

Ever think the Germans would never tear down the Berlin Wall? Guess what: they did!// Ever think the Russians would never choose their own leaders? Guess what: they are!// Would you ever believe the world could pull together to say "enough" to a Baghdad bully. Guess what: we did, and we will again if we have to!//

The world is safer today. Our children and grandchildren may ask us for Barbie dolls and softball bats, but freedom from fear --- the fear of nuclear destruction is not a bad gift to give.//

Now, I'm sure you all know the old story about the New Yorker, who came to Dallas proclaiming -- "I've been born a Yankee, lived a Yankee, and I'll die a Yankee." And a grizzled Texan responded: "What's the matter son, lack ambition?"//

Well, for New Yorkers and Texans alike, it is time to consider America's ambition. Our belief that now that we have changed the world, we can change America for the better.

America is like one of those high school football teams that play here in Waxahachie every Friday night. For years, we've been running and passing, while almost everyone else stuck to the ground game. Now the rest of the world is using our playbook. The score is counted in good jobs and high wages. And the question is: can we stay ahead?

From what you hear on TV, you might think the answer is no. Listen to the negative side talk about our economy reminds me of the freshman who walked onto the field at SMU for his first football practice. He told the coach, "look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to be hired as an economist for the other party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the largest economy in the world -- and no other nation sells more products outside its

borders. If you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, grab a Texas twang or a Yankee accent, because the "Dream Team" of workers can be found right here -- in the USA.//

Remember inflation -- the Jesse James of the middle-class? We took that crook and locked him away in a maximum security prison, because I don't want him touching your paycheck.//

In almost every industry, our companies and our workers have become more competitive. But this progress has had a price. Global economic changes have thrown people out of work in virtually every nation. Here at home, too many young people can't find a job, and too many people have worked for the same company for 20- or 30-years only to worry that the next mail run will bring a pink slip.

How do we respond? That is the issue before America. Today I have come here to talk a little bit about what we need to do ... to put America back to work. As you know, I worked in the oil business for many years. Trying to create jobs and meet a payroll. I believe that America's heartbeat can be found in places like Waxahachie, not Washington D.C. And so I stake my claim in a simple faith, to lead a great nation, you must trust the people you lead.

My plans for the economy reflect this philosophy. I believe that government never created a long-term job, although government may have kept Johnny Carson on the air for three decades. I trust America's business leaders and workers to

outperform the world, if we give them the support and incentives.

In January, I put forward a comprehensive program to jump start the American economy, using tax incentives to encourage businesses to hire new workers, and help Americans who want to buy a first home.

Every day this plan is in place, it would create (10,000) new jobs. That's (10,000) jobs yesterday, today and tomorrow, and every day thereafter.

But for 180 days I've waited, while the U.S. Congress has held the economic recovery hostage. Their ransom note reads: "wait till after the election." Meanwhile, our economy gets softer. Today I say to the Congress, lets trust the people to get this economy moving again. Don't hold the American economy hostage to partisan politics. Vote for an economic recovery program, and put America back to work --- now!//

That's our short-term program.

But the changes occurring in the world's economy are fundamental -- and they demand the same action in return.

Look at the world we live in today. A world in which more men wear Armani suits in New York than in Rome. More walkmans play music in Caracas than in Tokyo. And while a heck of a lot of Texans love (insert Texas product), even more are sold in ( ) than over in Dallas.

If we can compete in this new economy, we can take advantage of more opportunity than ever before. Good jobs for us and our children.

per  
Boskin

Just look south at Mexico, where the border has been partially open since 1986, U.S. exports to Mexico have tripled. Here in Texas, (insert local companies growth)

We're fighting for a trade treaty that will further increase demand for these products. Some say, wait a minute, should we do this. I ask them to remember that our national symbol is not the Ostrich, it's the Eagle. I trust our companies, I trust our workers, and I will match them against any competition. Let other nations stick their head in the sand, we will spread our wings and fly to a new level of jobs and prosperity.//

So I believe we can compete. But we have to understand, that our economy has changed a great deal, since I staked my first claim in Odessa four decades ago.

Today, the black gold, the "Texas tea" of our economy is knowledge. Whether you're working in the military, the marketplace or on a mainframe computer, in the next century, what you know will determine what you do with your life.

Government cannot create knowledge, but, we can make sure the soil is moist so knowledge can grow. For four years, I have tilled the fertile soil of our schools and laboratories so that we may sprout good jobs for our children.

I have proposed -- and I have fought for -- what I call the America 2,000 program --- to make our grade schools and high schools as good as our colleges. To let you decide where your child should go to a school ... be it a public school, a private school, or a church school.

I have proposed --- and I have fought for --- a national effort, to guarantee that in just eight years our children will once again know more about trigonometry and biology than any other students in the world.//

I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, to improve the National Science Foundation, and hasten advancements in everything from biotechnology to high performing computers. Just as oil once built these parts, and steel the Midwest, science will be the foundation of 21st century jobs all across this great nation.//

Finally, I have proposed --- and I have fought for --- programs to strengthen private sector research through government partnerships and by making permanent a tax credit for private research and exploration. Because we have to understand ... the advances in our laboratories today will show up in your paychecks tomorrow.//

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future, loyal to our children. Let others talk about investments, we make them. And we can do it with no new taxes, and no budget busting spending.

The federal government already spends 1.4 trillion of your money. I believe we can make these investments, and prepare for the 21st Century economy, without forcing you to turn out your pockets today.

*Experimentation ?*

*Per Cabinet Affairs*

I propose we cut back on mandatory spending, and do away with over 200 government programs that don't simply work anymore. (Insert country music song) says that "time goes on forever," but he didn't mention anything about government programs.

This Superconducting Supercollider is a big part of my investment in America's future. Once we reached for the moon above to explore new frontiers of our universe, next month we will begin to tunnel below to learn how our universe was formed in the first place.

It's hard to explain the benefits to a layman like myself. One young scientist calls the SuperCollider the scientific equivalent of bungee-cord jumping, when it come to colliding atoms, it's not the experience itself that counts, but what you learn along the way.// But the issue at stake is far more than the thousands of direct jobs associated with building this project. The issue is the hundreds of thousands and potentially millions of jobs in health care, computers and other industries that could eventually be created from the discoveries that you will make.

Some in Congress disagree, they have voted to shut this project down. No one should be under any illusion, savings from killing the SuperCollider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year. Just to make sure your wallet is protected, I keep a veto pen right here in my pocket.

If Congress stops this project they will direct this investment to organized special interests whose support they need in an election year. They will squander your money today, rather than invest in our economy and our children tomorrow.

Today I say: I stand with Texas. I stand with our future.  
I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries later, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Today, new worlds beckon, new discoveries await, new progress lie before us. Our horizon is not the ocean but the underground -- our vessel not called the Santa Maria but the Supercollider -- human imagination is still our compass, and human ingenuity and yearning for progress our only power. I believe you can trust these ideas to captain our economy to calmer waters. Trust these ideas to change our nation, by putting our faith in people, not government. Trust these ideas to change for America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.

Presidential Remarks  
SuperCollider Event

30 July 1992  
Wapakachie, TX

Thank you and good morning everyone.

(Acknowledgements)

As much as any Americans, Texans know how to pick ~~yourself~~ <sup>themselves</sup> out of the dust and get back in the saddle, to ride and win another day. So I come here this morning to talk a little bit about America's challenges, and how we are going to meet them.

The past four years have been a rough stretch for Robert Ludlum and others who write fiction for a living. Think about it. With all that's been going on in the world -- is there any room left for imagination?

Ever think the Germans would never tear down the Berlin Wall? Guess what: they did!// Ever think the Russians would never choose their own leaders? Guess what: they are!// Would you ever believe the world could pull together to say "enough" to a Baghdad bully. Guess what: we did, and we will again if we have to!//

The world is safer today. Our children and grandchildren may ask us for Barbie dolls and softball bats, but freedom from fear --- the fear of nuclear destruction is not a bad gift to give.//

Now, I'm sure you all know the old story about the New Yorker, who came to Dallas proclaiming -- "I've been born a Yankee, lived a Yankee, and I'll die a Yankee." And a grizzled Texan responded: "What's the matter son, lack ambition?"//

Well, for New Yorkers and Texans alike, it is time to consider America's ambition. Our belief that now that we have changed the world, we can change America for the better.

America is like one of those high school football teams that play here in Waxahachie every Friday night. For years, we've been running and passing, while almost everyone else stuck to the ground game. Now the rest of the world is using our playbook. The score is counted in good jobs and high wages. And the question is: can we stay ahead?

From what you hear on TV, you might think the answer is no. ing Listen to the negative side talk about our economy reminds me of the freshman who walked onto the field at SMU for his first football practice. He told the coach, "look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to be hired as an economist for the other party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the largest economy in the world -- and no other nation sells more products outside its

borders. If you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, grab a Texas twang or a Yankee accent, because the "Dream Team" of workers can be found right here -- in the USA.//

Remember inflation -- the Jesse James of the middle-class? We took that crook and locked him away in a maximum security prison, because I don't want him touching your paycheck.//

In almost every industry, our companies and our workers have become more competitive. But this progress has had a price. Global economic changes have thrown people out of work in virtually every nation. Here at home, too many young people can't find a job, and too many people have worked for the same company for 20- or 30-years only to worry that the next mail run will bring a pink slip.

How do we respond? That is the issue before America. Today I have come here to talk a little bit about what we need to do ... to put America back to work. As you know, I worked in the oil business for many years. Trying to create jobs and meet a payroll. I believe that America's heartbeat can be found in places like Waxahachie, not Washington D.C. And so I stake my claim in a simple faith, to lead a great nation, you must trust the people you lead.

My plans for the economy reflect this philosophy. I believe that government never created a long-term job, although government may have kept Johnny Carson on the air for three decades. I trust America's business leaders and workers to

*in the private sector*

outperform the world, if we give them the support and incentives.

In January, I put forward a comprehensive program to jump start the American economy, using tax incentives to encourage businesses to hire new workers, and help Americans who want to buy a first home.

Every day this plan is in place, it would create (10,000) new jobs. That's (10,000) jobs yesterday, today and tomorrow, and every day thereafter.

But for 180 days I've waited, while the U.S. Congress has held the economic recovery hostage. Their ransom note reads: "wait till after the election." Meanwhile, our economy gets softer. Today I say to the Congress, lets trust the people to get this economy moving again. Don't hold the American economy hostage to partisan politics. Vote for an economic recovery program, and put America back to work --- now!//

That's our short-term program.

But the changes occurring in the world's economy are fundamental -- and they demand the same action in return.

Look at the world we live in today. A world in which more men wear Armani suits in New York than in Rome. More walkmans play music in Caracas than in Tokyo. And while a heck of a lot of Texans love (insert Texas product), even more are sold in ( ) than over in Dallas.

If we can compete in this new economy, we can take advantage of more opportunity than ever before. Good jobs for us and our children.

Just look south at Mexico, where the border has been partially open since 1986, U.S. exports to Mexico have tripled. Here in Texas, (insert local companies growth)

We're fighting for a trade treaty that will further increase demand for these products. Some say, wait a minute, should we do this. I ask them to remember that our national symbol is not the Ostrich, it's the Eagle. I trust our companies, I trust our workers, and I will match them against any competition. Let other nations stick their head in the sand, we will spread our wings and fly to a new level of jobs and prosperity.//

So I believe we can compete. But we have to understand, that our economy has changed a great deal, since I staked my first claim in Odessa four decades ago.

Today, the black gold, ~~the "Texas tea"~~ of our economy is knowledge. Whether you're working in the military, the marketplace or on a mainframe computer, in the next century, what you know will determine what you do with your life.

} Aagh!

Insert A

Thank you and good morning everyone.

(Acknowledgements)

As much as any Americans, Texans know how to pick yourself out of the dust and get back in the saddle, to ride and win another day. So I come here this morning to talk a little bit about America's challenges, and how we are going to meet them.

The past four years have been a rough stretch for Robert Ludlum and others who write fiction for a living. Think about it. With all that's been going on in the world -- is there any room left for imagination?

Ever think the Germans would never tear down the Berlin Wall? Guess what: they did! Ever think the Russians would never choose their own leaders? Guess what: they are! Would you ever believe the world could pull together to say "enough" to a Baghdad bully. Guess what: we did, and we will again if we have to!

The world is safer today. Our children and grandchildren may ask us for Barbie dolls and softball bats, but freedom from fear --- the fear of nuclear destruction is not a bad gift to give.//

*Energy*

Insert A

The Supercollider represents the greatest scientific project in the world, the largest single construction project in America and the most splendid assemblage of scientific talent in the United States.

Just a few weeks ago, I met with 7 preeminent scientists-- among them 4 Nobel laureates-- to discuss the SSC. To a man, they support the SSC. Some of them talked in terms of quarks and quenchers, matter and anti-matter, terms that mean more to you than they do to me. Beyond the issues that motivate high energy physicists, however, as important as those are, they also talked about what this project means for our future.

They told me that without the SSC, we could not keep the best and the brightest scientists here in the U.S. They will go to where the action is, whether that is Japan, Germany, or somewhere else, taking their enormous talents with them, perhaps forever. At a time when we are struggling to educate our kids to be the best in the world in math and science education, I, for one, am not about to tell them that the SSC is a luxury that we cannot afford.

But more than the future of science is at stake here. I know that it is hard to make the connection between quarks and jobs, but my old friend, Bob Galvin of Motorola, put it very simply. He said it represents the future of the electronics industry. Just as expanding knowledge of subatomic particles paved the way for the electronics industry of today and the millions of Americans that it employs, ~~the knowledge of matter to be provided by the SSC represents the key to the electronics industry of tomorrow, and the good jobs that we want for our children and theirs.~~

*what we  
will learn  
from  
building and  
operating*

This is why I am absolutely convinced that building the SSC is an investment in the future we must make.

The benefits of the SSC are not all in the future, however. Hundreds of universities and businesses all across the country are participating in building the SSC. And these are not just big companies. Already in this fiscal year, \$114 million has been committed to small and disadvantaged firms in some 40 states. Given the important role that small businesses play in economic growth and job creation, the value of the SSC in stimulating these enterprises is crucial.

Now, I'm sure you all know the old story about the New Yorker, who came to Dallas proclaiming -- "I've been born a Yankee, lived a Yankee, and I'll die a Yankee." And a grizzled Texan responded: "What's the matter son, lack ambition?"//

Well, for New Yorkers and Texans alike, it is time to consider America's ambition. Our belief that now that we have changed the world, we can change America for the better.

America is like one of those high school football teams that play here in Waxahachie every Friday night. For years, we've been running and passing, while almost everyone else stuck to the ground game. Now the rest of the world is using our playbook. The score is counted in good jobs and high wages. And the question is: can we stay ahead?

From what you hear on TV, you might think the answer is no. Listen to the negative side talk about our economy reminds me of the freshman who walked onto the field at SMU for his first football practice. He told the coach, "look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to be hired as an economist for the other party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the largest economy in the world -- and no other nation sells more products outside its

borders. If you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, grab a Texas twang or a Yankee accent, because the "Dream Team" of workers can be found right here -- in the USA.//

Remember inflation -- the Jesse James of the middle-class? We took that crook and locked him away in a maximum security prison, because I don't want him touching your paycheck.//

In almost every industry, our companies and our workers have become more competitive. But this progress has had a price. Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries later, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Today, new worlds beckon, new discoveries await, new progress lies before us. Our horizon is not the ocean but the underground -- our vessel not called the Santa Maria but the Supercollider -- human imagination is still our compass, and human ingenuity and yearning for progress our only power. I believe you can trust these ideas to captain our economy to calmer waters. Trust these ideas to change our nation, by putting our faith in people, not government. Trust these ideas to change for America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.

*If Christopher Columbus had to rely upon our Congress they would have turned him around half-way across the Atlantic*

The Secretary of Energy  
Washington, DC 20585  
July 29, 1992

Honorable W. Henson Moore  
Deputy Chief of Staff  
The White House  
Washington, D.C. 20500

Dear Henson:

There is an important, unpublicized success story related to the participation of small disadvantaged businesses in the Superconducting Super Collider (SSC) project that the President may wish to use in his speech on Thursday at the SSC Laboratory. As you may recall, Congress mandated a 10 percent goal for participation of small disadvantaged businesses in the project. Small disadvantaged businesses include both small minority and women-owned businesses. In FY 1991, funding for small disadvantaged businesses, including direct contracts from the Laboratory and lower tier subcontracts, was 132 percent of the goal set by Congress; through the third quarter of FY 1992, 119 percent of the goal has already been achieved. Translated into dollars, the goal for FY 1992 is \$44M, and \$52M has been committed to companies in approximately 40 states.

In addition, the numbers for funding of small businesses as a whole, including small disadvantaged businesses, are also impressive. The goal of \$48M was set in FY 1991 and was exceeded by 206 percent when \$99M was awarded to small businesses. Furthermore, the goal set in FY 1992, \$88M, has already been exceeded by 130 percent (\$114M).

Given the important role that small businesses play in economic growth and the creation of new jobs, I believe this is an important story for the Administration to emphasize.

Sincerely,

  
James D. Watkins  
Admiral, U.S. Navy (Retired)

Presidential Remarks  
SuperCollider Event30 July 1992  
Waxahachie, TXSee Energy Insert A

Thank you and good morning everyone.

(Acknowledgements)

As much as any Americans, Texans know how to pick yourself out of the dust and get back in the saddle, to ride and win another day. So I come here this morning to talk a little bit about America's challenges, and how we are going to meet them.

The past four years have been a rough stretch for Robert Ludlum and others who write fiction for a living. Think about it. With all that's been going on in the world -- is there any room left for imagination?

Ever think the Germans would never tear down the Berlin Wall? Guess what: they did! Ever think the Russians would never choose their own leaders? Guess what: they are! Would you ever believe the world could pull together to say "enough" to a Baghdad bully. Guess what: we did, and we will again if we have to!

The world is safer today. Our children and grandchildren may ask us for Barbie dolls and softball bats, but freedom from fear --- the fear of nuclear destruction is not a bad gift to give. //

2

Now, I'm sure you all know the old story about the New Yorker, who came to Dallas proclaiming -- "I've been born a Yankee, lived a Yankee, and I'll die a Yankee." And a grizzled Texan responded: "What's the matter son, lack ambition?"//

Well, for New Yorkers and Texans alike, it is time to consider America's ambition. Our belief that now that we have changed the world, we can change America for the better.

America is like one of these high school football teams that play here in Waxahachie every Friday night. For years, we've been running and passing, while almost everyone else stuck to the ground game. Now the rest of the world is using our playbook. The score is counted in good jobs and high wages. And the question is: can we stay ahead?

From what you hear on TV, you might think the answer is no. Listen to the negative side talk about our economy reminds me of the freshman who walked onto the field at SMU for his first football practice. He told the coach, "look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to be hired as an economist for the other party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the largest economy in the world -- and no other nation sells more products outside its

3

borders. If you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, grab a Texas twang or a Yankee accent, because the "Dream Team" of workers can be found right here -- in the USA.//

Remember inflation -- the Jesse James of the middle-class? We took that crook and locked him away in a maximum security prison, because I don't want him touching your paycheck.//

In almost every industry, our companies and our workers have become more competitive. But this progress has had a price. Global economic changes have thrown people out of work in virtually every nation. Here at home, too many young people can't find a job, and too many people have worked for the same company for 20- or 30-years only to worry that the next mail run will bring a pink slip.

How do we respond? That is the issue before America. Today I have come here to talk a little bit about what we need to do ... to put America back to work. As you know, I worked in the oil business for many years. Trying to create jobs and meet a payroll. I believe that America's heartbeat can be found in places like Waxahachie, not Washington D.C. And so I stake my claim in a simple faith, to lead a great nation, you must trust the people you lead.

My plans for the economy reflect this philosophy. I believe that government never created a long-term job, although government may have kept Johnny Carson on the air for three decades. I trust America's business leaders and workers to

4

outperform the world, if we give them the support and incentives.

In January, I put forward a comprehensive program to jump start the American economy, using tax incentives to encourage businesses to hire new workers, and help Americans who want to buy a first home.

Every day this plan is in place, it would create (10,000) new jobs. That's (10,000) jobs yesterday, today and tomorrow, and every day thereafter.

But for 180 days I've waited, while the U.S. Congress has held the economic recovery hostage. Their ransom note reads: "wait till after the election." Meanwhile, our economy gets softer. Today I say to the Congress, lets trust the people to get this economy moving again. Don't hold the American economy hostage to partisan politics. Vote for an economic recovery program, and put America back to work --- now!!!

That's our short-term program.

But the changes occurring in the world's economy are fundamental -- and they demand the same action in return.

Look at the world we live in today. A world in which more men wear Armani suits in New York than in Rome. More walkmans play music in Caracas than in Tokyo. And while a heck of a lot of Texans love (insert Texas product), even more are sold in ( ) than over in Dallas.

If we can compete in this new economy, we can take advantage of more opportunity than ever before. Good jobs for us and our children.

5

Just look south at Mexico, where the border has been partially open since 1986, U.S. exports to Mexico have tripled. Here in Texas, (insert local companies growth)

We're fighting for a trade treaty that will further increase demand for these products. Some say, wait a minute, should we do this. I ask them to remember that our national symbol is not the Ostrich, it's the Eagle. I trust our companies, I trust our workers, and I will match them against any competition. Let other nations stick their head in the sand, we will spread our wings and fly to a new level of jobs and prosperity.//

So I believe we can compete. But we have to understand, that our economy has changed a great deal, since I staked my first claim in Odessa four decades ago.

Today, the black gold, the "Texas tea" of our economy is knowledge. Whether you're working in the military, the marketplace or on a mainframe computer, in the next century, what you know will determine what you do with your life.

Government cannot create knowledge, but, we can make sure the soil is moist so knowledge can grow. For four years, I have tilled the fertile soil of our schools and laboratories so that we may sprout good jobs for our children.

I have proposed -- and I have fought for -- what I call the America 2,000 program --- to make our grade schools and high schools as good as our colleges. To let you decide where your child should go to a school ... be it a public school, a private school, or a church school.

6

I have proposed --- and I have fought for --- a national effort, to guarantee that in just eight years our children will once again know more about trigonometry and biology than any other students in the world.//

I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, to improve the National Science Foundation, and hasten advancements in everything from biotechnology to high performing computers. Just as oil once built these parts, and steel the Midwest, science will be the foundation of 21st century jobs all across this great nation.//

Finally, I have proposed --- and I have fought for --- programs to strengthen private sector research through government partnerships and by making permanent a tax credit for private research and exploration. Because we have to understand ... the advances in our laboratories today will show up in your paychecks tomorrow.//

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future, loyal to our children. Let others talk about investments, we make them. And we can do it with no new taxes, and no budget busting spending.

The federal government already spends 1.4 trillion of your money. I believe we can make these investments, and prepare for the 21st Century economy, without forcing you to turn out your pockets today.

7

I propose we cut back on mandatory spending, and do away with over 200 government programs that don't simply work anymore. (Insert country music song) says that "time goes on forever," but he didn't mention anything about government programs.

This Superconducting Supercollider is a big part of my investment in America's future. Once we reached for the moon above to explore new frontiers of our universe, next month we will begin to tunnel below to learn how our universe was formed in the first place.

It's hard to explain the benefits to a layman like myself. One young scientist calls the SuperCollider the scientific equivalent of bungee-cord jumping, when it come to colliding atoms, it's not the experience itself that counts, but what you learn along the way.// But the issue at stake is far more than the thousands of direct jobs associated with building this project. The issue is the hundreds of thousands and potentially millions of jobs in health care, computers and other industries that could eventually be created from the discoveries that you will make.

Some in Congress disagree, they have voted to shut this project down. No one should be under any illusion, savings from killing the SuperCollider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year. Just to make sure your wallet is protected, I keep a veto pen right here in my pocket.

If Congress stops this project they will direct this investment to organized special interests whose support they need in an election year. They will squander your money today, rather than invest in our economy and our children tomorrow.

Today I say: I stand with Texas. I stand with our future.  
I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries later, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Presidential Remarks  
SuperCollider Event  
Dallas, TX  
30 September 1992

Thank you and good morning everyone.

(Acknowledgements)

As much as any state, Texas is a land of old and new -- a place where "boot" means something you wear on you feet, and what you do to get on your computer each morning. And so I come here to talk to you about what we need to do, to prepare for the economy of the 21st century.

Listening to all the talk these days about our economy reminds me of the freshman who walked onto the field over at SMU for his first football practice. He told the coach: "Look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to work for the other political party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the world's largest economy -- and no other nation sells more products outside its borders. Inflation is the lowest in two decades ... and if you want to

talk to the world's most productive workers, don't brush up on your Japanese or your German, the "Dream Team" of workers can be found right here -- in the USA.//

The question today is not can America compete, we know we can. The question is -- how do we stay number one, and share our prosperity with more Americans.

Right now a debate is raging. On one side are people who are fearful of the future. They don't trust our people, they only trust government to hang on to what we have today.

I take a different approach. I don't fear the future, I embrace it. I believe America can win the new economic Olympics, if our government is wise enough to trust our people and get them ready for the big event.

Today, new statistics came out revealing what you already know, our economy is growing -- but not fast enough. This summer, our economy grew ( ) percent, compared to 2.790 in the first quarter of this year. This isn't unusual. Even after World War II, the first year of recoveries have been uneven, with one quarter up, another down a little.

Like most private economists, I'm confident the economy will continue to grow -- probably at 3 percent the rest of the year. But we must guarantee their growth, by acting now.

On January 29th, I put forward a specific plan to create new jobs, using tax incentives to encourage businesses to hire new workers and help Americans who want to buy a first home. The

simple fact is: I trust you to spend your money and get the economy moving.

My plan is in place, it would create almost 15,000 new jobs. 15,000 jobs on January 30th! 15,000 jobs on May 30th! 15,000 jobs today!

Congress took my plan, and sent me back a tax increase -- or idea that put government ahead of people. So I vetoed it. For 183 days I've waited for Congress to act again. Today I say to the Congress, we need those 15,000 jobs today. Don't hold the American economy hostage to politics. Vote for an economic recovery program, and put Americans to work --- now!//

That's what we need to do today. But changes occurring in the world's economy are fundamental -- and they demand long-term action. As we watch the Olympics on TV this week, we marvel at the competitive energy. (I still can't get over the guy who shot the arrow to light the flame. How'd you like to do that with a hundred million people watching?)

The Olympics are a metaphor for our new economy. Today, people in Eastern Europe and China want our computers and cars, even our colas. We can fill the need.

Just look south at Mexico, where the border has been partially open since 1986. U.S. exports have tripled with Texas companies are leading the way.

I'm fighting for a North American trade treaty that will increase Mexican demand for Texas fruits, computers, and hundreds of other products. Some people look at this new world of trade

and get scared. They talk protectionism, suggesting we should pack our bags before the games begin. I trust American companies, and I trust American workers. Our national symbol is not the Ostrich, but the Eagle. Let other nations stick their head in the sand, we will spread our wings and fly to jobs for you, and your family.//

Our economy has changed in many ways since I staked my first claim in Odessa four decades ago. Back then, you could get a job because of what you could lift with your shoulders, today a good job depends on what you can fit inside your head.

Think about this: In 1980 ... a man with a college education made an average of \$11,000 more per year than a man with a high school education. By 1990, that gap had increased to \$16,000. And the same thing happened with women.

Knowledge has become the foundation of our economy. Whether our kids will work in the military, the marketplace or on a mainframe computer, what they know will determine what they do with their lives.

So I have proposed -- and I have fought for -- what I call the America 2,000 program --- to make our grade schools and high schools as great as our colleges. I'm proud of our world dominance in basketball and swimming, but don't you want our kids to do just as well in trigonometry and biology?//

A hundred and fifty years ago, Thomas Edison said "if you build a better mousetrap, the world will beat a path to your

door." Today those world-beating mousetraps are advances in computers, biotechnology and material sciences.

New computers mean that in an age when information is king, we can all wear a crown. (We can even get a FAX in our car, which leads to the philosophical question: who wants to get a FAX in their car?)

Advances in biotechnology allow us to cure illnesses that have plagued mankind for generations. Breakthroughs in material science mean that we can build everything from airplanes to cars in ways that will make them faster, stronger and cheaper.

America has always been the cradle of technology --- the best in the world. In the 21st century --- we must make sure that translates into being the best in the marketplace.

So I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, and improve the National Science Foundation, and to spur the development of biotechnology and supercomputers.

These programs are not a form of "industrial policy" -- they provide the technological leaps that make economic leaps possible. I put my trust in American companies and American workers. But they need incentives to invest in their own research, their own ideas.

So I have proposed -- and I have fought for -- the idea of making permanent the research and experimentation tax credit, to cut the cost of private research by 20 percent. We should

understand -- what happens in laboratories today, shows up in your paycheck tomorrow.//

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future -- loyal to our children. And we can make the investment with no new taxes, no budget busting spending.

The federal government already spends 1.4 trillion of your money every year. So I propose we set priorities. Cut back on mandatory spending today ... and do away with almost 250 government programs that don't simply work anymore.

One of my favorite singers is Randy Travis. Randy has a song that says, "our love would last forever." I'm not sure Randy would say the same thing about a taxpayer supported federal research program on the mating habits of minks.

This Superconducting SuperCollider is a big part of my investment in America's future. It is the worlds greatest scientific project, a magnet for scientific geniuses from around the world. Where once we reached for the moon above to explore new frontiers of our universe, soon we will begin to tunnel below to learn about the fundamental question of science --- how our universe began.

It's hard to explain the benefits to a layman like myself. One young scientist calls the SuperCollider "the scientific equivalent of that crazy new sport -- bungee jumping." I guess what he means is that when it come to colliding atoms, it's not

the experience itself that counts, but what you learn along the way.//

History has shown that pushing technology to ever higher levels of accomplishment brings immensely practical consequences --- here for example, a new electronics industry will be born of the discoveries that you make.

Some in Congress disagree. The House last month voted to shut to shut this project down, and the Senate may vote as soon as today. No one should be under any illusion, savings from killing the SuperCollider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year.

If Congress stops this project they will direct this investment to support organized interests whose support they need in an election year. They will squander taxpayer's money today, rather than invest in our economy tomorrow. Make no mistake, this is a battle between the "patrons of the past," and the "architects of the future."

It may not be popular in all places, but I want to do what's right for America. Today I say: I stand with Texas. I stand with our future. I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries after that, scientists at

Johnson Space Center watched as brave Americans set sail for the stars.

Today, new frontiers beckon, new discoveries await, new progress lies before us. Our adventure is not to sail the open ocean but rather to go to the edge of the universe and see the birth of space. Our vessel not called the Santa Maria but the Supercollider -- but human imagination is still our compass, and human ingenuity and yearning for progress our only power.

I believe you can trust the ideas I have outlined to carry our economy to calmer waters. Trust these ideas to change America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.

Presidential Remarks  
SuperCollider Event

30 July 1992  
Wapakachie, TX

Not  
as is  
on  
cover.

Thank you and good morning everyone.

(Acknowledgements)

As much as any Americans, Texans know how to pick <sup>themselves</sup> yourself out of the dust and get back in the saddle, to ride and win another day. So I come here this morning to talk a little bit about America's challenges, and how we are going to meet them.

The past four years have been a rough stretch for Robert Ludlum and others who write fiction for a living. Think about it. With all that's been going on in the world -- is there any room left for imagination?

Ever think the Germans would never tear down the Berlin Wall? Guess what: they did!// Ever think the Russians would never choose their own leaders? Guess what: they are!// Would you ever believe the world could pull together to say "enough" to a Baghdad bully. Guess what: we did, and we will again if we have to!//

The world is safer today. Our children and grandchildren may ask us for Barbie dolls and softball bats, but freedom from fear --- the fear of nuclear destruction is not a bad gift to give.//

Now, I'm sure you all know the old story about the New Yorker, who came to Dallas proclaiming -- "I've been born a Yankee, lived a Yankee, and I'll die a Yankee." And a grizzled Texan responded: "What's the matter son, lack ambition?"//

Well, for New Yorkers and Texans alike, it is time to consider America's ambition. Our belief that now that we have changed the world, we can change America for the better.

America is like one of those high school football teams that play here in Waxahachie every Friday night. For years, we've been running and passing, while almost everyone else stuck to the ground game. Now the rest of the world is using our playbook. The score is counted in good jobs and high wages. And the question is: can we stay ahead?

From what you hear on TV, you might think the answer is no. Listen to the negative side talk about our economy reminds me of the freshman who walked onto the field at SMU for his first football practice. He told the coach, "look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to be hired as an economist for the other party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the largest economy in the world -- and no other nation sells more products outside its

borders. If you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, grab a Texas twang or a Yankee accent, because the "Dream Team" of workers can be found right here -- in the USA.//

Remember inflation -- the Jesse James of the middle-class? We took that crook and locked him away in a maximum security prison, because I don't want him touching your paycheck.//

In almost every industry, our companies and our workers have become more competitive. But this progress has had a price. Global economic changes have thrown people out of work in virtually every nation. Here at home, too many young people can't find a job, and too many people have worked for the same company for 20- or 30-years only to worry that the next mail run will bring a pink slip.

How do we respond? That is the issue before America. Today I have come here to talk a little bit about what we need to do ... to put America back to work. As you know, I worked in the oil business for many years. Trying to create jobs and meet a payroll. I believe that America's heartbeat can be found in places like Waxahachie, not Washington D.C. And so I stake my claim in a simple faith, to lead a great nation, you must trust the people you lead.

My plans for the economy reflect this philosophy. I believe that government never created a long-term job, although government may have kept Johnny Carson on the air for three decades. I trust America's business leaders and workers to

outperform the world, if we give them the support and incentives.

In January, I put forward a comprehensive program to jump start the American economy, using tax incentives to encourage businesses to hire new workers, and help Americans who want to buy a first home.

Every day this plan is in place, it would create (10,000) new jobs. That's (10,000) jobs yesterday, today and tomorrow, and every day thereafter.

But for 180 days I've waited, while the U.S. Congress has held the economic recovery hostage. Their ransom note reads: "wait till after the election." Meanwhile, our economy gets softer. Today I say to the Congress, lets trust the people to get this economy moving again. Don't hold the American economy hostage to partisan politics. Vote for an economic recovery program, and put America back to work --- now!//

That's our short-term program.

But the changes occurring in the world's economy are fundamental -- and they demand the same action in return.

Look at the world we live in today. A world in which more men wear Armani suits in New York than in Rome. More walkmans play music in Caracas than in Tokyo. And while a heck of a lot of Texans love (insert Texas product), even more are sold in ( ) than over in Dallas.

If we can compete in this new economy, we can take advantage of more opportunity than ever before. Good jobs for us and our children.

Just look south at Mexico, where the border has been partially open since 1986, U.S. exports to Mexico have tripled. Here in Texas, (insert local companies growth)

We're fighting for a trade treaty that will further increase demand for these products. Some say, wait a minute, should we do this. I ask them to remember that our national symbol is not the Ostrich, it's the Eagle. I trust our companies, I trust our workers, and I will match them against any competition. Let other nations stick their head in the sand, we will spread our wings and fly to a new level of jobs and prosperity.//

So I believe we can compete. But we have to understand, that our economy has changed a great deal, since I staked my first claim in Odessa four decades ago.

Today, the black gold, the "Texas tea" of our economy is knowledge. Whether you're working in the military, the marketplace or on a mainframe computer, in the next century, what you know will determine what you do with your life.

Government cannot create knowledge, but, we can make sure the soil is moist so knowledge can grow. For four years, I have tilled the fertile soil of our schools and laboratories so that we may sprout good jobs for our children.

I have proposed -- and I have fought for -- what I call the America 2,000 program --- to make our grade schools and high schools as good as our colleges. To let you decide where your child should go to a school ... be it a public school, a private school, or a church school.

I have proposed --- and I have fought for --- a national effort, to guarantee that in just eight years our children will once again know more about trigonometry and biology than any other students in the world.//

I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, to improve the National Science Foundation, and hasten advancements in everything from biotechnology to high performing computers. Just as oil once built these parts, and steel the Midwest, science will be the foundation of 21st century jobs all across this great nation.//

Finally, I have proposed --- and I have fought for --- programs to strengthen private sector research through government partnerships and by making permanent a tax credit for private research and exploration. Because we have to understand ... the advances in our laboratories today will show up in your paychecks tomorrow.//

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future, loyal to our children. Let others talk about investments, we make them. And we can do it with no new taxes, and no budget busting spending.

The federal government already spends 1.4 trillion of your money. I believe we can make these investments, and prepare for the 21st Century economy, without forcing you to turn out your pockets today.

I propose we cut back on mandatory spending, and do away with over 200 government programs that don't simply work anymore. (Insert country music song) says that "time goes on forever," but he didn't mention anything about government programs.

This Superconducting Supercollider is a big part of my investment in America's future. We have already reached for the moon to explore new frontiers of our solar system, next month we will begin construction of the greatest scientific instrument ever conceived by men to explore some of the most fundamental questions in all of science -- how did our universe begin, of what fundamental building blocks is it constructed and what forces hold these blocks together in the rich fabric of materials from rocks through plants to humans like ourselves.

Laymen, like me, have very real difficulties in grasping even a rough idea of what is involved in such work but the enthusiasm of young scientist is very contagious and even I can begin to understand that what we are dealing with here is one of the greatest adventure to which humans have access. Pushing back the frontiers of ignorance is an activity that truly separates us from all other species. What Dr. Schwitters and colleagues from around the world are planning with this facility is to pour even more energy into ever smaller volumes in the hope that heavy particles, never before observed -- particles that may hold vital secrets about both the birth and death of our universe and of our place in it will flash into existence for brief instants -- brief, but still long enough for critical measurements to be made on them using the fantastic information instrumentation that has always been one of the hallmarks of leading edge physics. And while a triumph of the human intellect and inspiration to citizens of all nations, work of the kind that the supercollider will make possible, pushing technology to ever higher levels of accomplishment, has been shown -- throughout history -- to have the most eminently practical consequences.

But the issue at stake is far more than the thousands of direct jobs associated with building this project. The issue is the hundreds of thousands and potentially millions of jobs in health care, computers and other industries that could eventually be created from the discoveries that you will make.

Some in Congress disagree, they have voted to shut this project down. No one should be under any illusion, savings from killing the SuperCollider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year. Just to make sure your wallet is protected, I keep a veto pen right here in my pocket.

If Congress stops this project they will direct this investment to organized special interests whose support they need in an election year. They will squander your money today, rather than invest in our economy and our children tomorrow.

Today I say: I stand with Texas. I stand with our future.  
I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries later, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Today, new <sup>frontiers</sup> ~~worlds~~ beckon, new discoveries await, new progress lie before us. Our <sup>adventure on the ocean</sup> horizon is not ~~the~~ <sup>rather to</sup> ~~ocean~~ but ~~the~~ <sup>rather</sup> ~~underground~~ -- our vessel not called the Santa Maria but the Supercollider -- human imagination is still our compass, and human ingenuity and yearning for progress our only power. I believe you can trust these ideas to captain our economy to calmer waters. Trust these ideas to change our nation, by putting our faith in people, not government. Trust these ideas to change for America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.

(Provost)

Presidential Remarks  
SuperCollider Event  
Dallas, TX  
30 September 1992

Thank you and good morning everyone.

(Acknowledgements)

As much as any state, Texas is a land of old and new -- a place where "boot" means something you wear on you feet, and what you do to get on your computer each morning. And so I come here to talk to you about what we need to do, to prepare for the economy of the 21st century.

Listening to all the talk these days about our economy reminds me of the freshman who walked onto the field over at SMU for his first football practice. He told the coach: "Look -- I can throw the ball sixty yards on a spiral, run the forty in 4.4, and my punts usually carry 75 yards into the wind." The coach looked at the young man and said, "kid, everybody has a weakness, what's yours?" And the freshman said: "some people might tell you I have a tendency to exaggerate a little."//

I wonder if that kid grew up to ~~be~~ work for the other political party. Sure we have our problems, our challenges, but lets not forget a few facts. We are still the world's largest economy -- and no other nation sells more products outside its borders. Inflation is the lowest it ~~has been~~ in two decades ...

and if you want to talk to the world's most productive workers, don't brush up on your Japanese or your German, ~~grab a Texas twang or a Yankee accent, because~~ the "Dream Team" of workers can be found right here -- in the USA.//

The question today is not can America compete, we know we can. The question is -- how do we stay number one, and share our prosperity with more Americans.

Right now a debate is raging. On one side are people who are fearful of the future. They don't trust our people, they only trust government to hang on to what we have today.

I take a different approach. I don't fear the future, I embrace it. I believe America can win the new economic Olympics, if our government is wise enough to trust our people and if we help the train. *get them ready for the big event.*

Two different philosophies. You can see them in every economic question we confront -- from taxes, to trade to how to build the new industries of the future.

Today, new statistics came out revealing what you already know ~~from your neighborhoods.~~ Our economy is growing -- but not fast enough. ~~We need to jump start our economic battery -- and we need to attach the cables now!!!~~

On January 29th, I put forward a ~~specific~~ plan to create new jobs, using tax incentives to encourage businesses to hire new workers and help Americans who want to buy a first home. The simple fact is: I trust you to spend your money and get the economy moving.

*This summer, our economy grew 1.7 percent, compared to 1.790 in the first quarter of this year. This isn't unusual. Ever since World War II, the first year*

of recoveries have been uneven, with one going up,  
another down a little.

~~I'm confident the economy~~

Like most private economists, I'm confident the  
economy will continue to grow - probably at  
3 percent the rest of the year. But we must  
guarantee this growth, by acting now.

Congress took my plan, and put me back a tax increase. ~~I voted it.~~

— a idea  
that put government ahead  
of people. I voted it.  
So ~~not~~

3

Congress took my

Every day ~~this~~ plan is in place, it would create almost  
15,000 new jobs. 15,000 jobs on January 30th! 15,000 jobs on  
May 30th! 15,000 jobs ~~on July 30th!~~ <sup>today</sup>

For 183 days I've waited for Congress to act again. Today I  
say to the Congress, we need these ~~15,000~~ <sup>new jobs</sup> jobs today, tomorrow  
~~and every day after.~~ Don't hold the American economy hostage to ~~it~~ <sup>stuck</sup>  
politics. Vote for <sup>my</sup> an economic recovery program, and put  
Americans to work --- now!!!

That's what we need to do today. But ~~the~~ changes occurring  
in the world's economy are fundamental -- and they demand long-  
term action. As we watch the Olympics on TV this week, we marvel  
at the competitive energy. (I still can't get over the guy who  
shot the arrow to light the flame. How'd you like to do that  
with ~~over~~ a hundred million people watching?)

But ~~the~~ Olympics are a metaphor for our new economy. Today,  
people in Eastern Europe and China ~~now~~ want our computers and  
cars, <sup>for</sup> even colas. We can fill the need.

Just look south at Mexico, where the border has been  
partially open since 1986. U.S. exports ~~to Mexico~~ have tripled, <sup>with</sup>  
Texas companies <sup>are</sup> lead <sup>by</sup> the way. <sup>Mexican</sup>

I'm fighting for a North American trade treaty that will  
increase demand for Texas fruits, computers, and ~~thousands of~~ <sup>hundreds of other</sup>  
other products. Some people look at this new world of trade and  
get scared. They talk protectionism, suggesting we should pack  
our bags before the games ~~even~~ begin. I trust American  
companies, and I trust American workers. Our national symbol is

to compete.

not the Ostrich, but the Eagle. Let other nations stick their head in the sand, we will spread our wings and fly to a new level of jobs and prosperity.//

*jobs for you, and your family!!!*

So I believe we can compete. But we have to understand that our economy has changed a great deal since I staked my first claim in Odessa four decades ago. Back then, you could get a good job because of what you could lift with your shoulders, today a job depends on what you can fit inside your head.

The facts tell the story. In 1980 ... a man with a college education made an average of \$11,000 more per year than a man with only a high school education. By 1990, that gap had increased to \$16,000. And the same thing happened with women.

The foundation of our economy has become knowledge. Whether our kids will work in the military, the marketplace or on a mainframe computer, in the next century, what they know will determine what they do with their lives.

*Knowledge has become*

So I have proposed -- and I have fought for -- what I call the America 2,000 program --- to make our grade schools and high schools as great as our colleges. I have put forth a new GI bill ... to give low-income parents the support to decide where kids should go to a school ... be it a public school, a private school, or a church school.

*freedom to*

I'm proud of our world dominance in basketball and swimming, but don't you want them to do just as well in trigonometry and biology?//

*our kids just*

A hundred and fifty years ago, Thomas Edison said <sup>that</sup> "if you build a better mousetrap, the world will beat a path to your door." Today those world-beating mousetraps are advances in computers, biotechnology and material sciences.

New computers mean that in an age when information is king, we can ~~now~~ all wear a crown. (We can even get a FAX in our car, which leads to the philosophical question <sup>!</sup> -- who wants to get a FAX in their car?)

Advances in biotechnology allow us to cure illnesses that have plagued mankind for generations. Breakthroughs in material science mean that we can build everything from airplanes to cars in ways that will make them faster, stronger and cheaper.

America has always been the cradle of technology --- the best in the world. In the 21st century --- we must make sure that translates into being the best in the marketplace.

So I have proposed -- and I have fought for -- programs to strengthen the basic research we conduct in our laboratories, ~~and~~ improve the National Science Foundation, and ~~to~~ spur the development of ~~new technologies~~ like biotechnology and supercomputers.

These programs are not <sup>ce</sup> ~~any~~ form of "industrial policy" -- they provide the technological leaps that make ~~the~~ economic leaps <sup>possible</sup> ~~policy~~. I put my trust in ~~the~~ American companies and American workers. But <sup>they</sup> ~~our~~ companies <sup>need</sup> can use incentives to invest in their own research, their own ideas.

So I have proposed -- and I have fought for -- the idea of making permanent the research and experimentation tax credit, to cut the cost of private research by 20 percent, ~~a year~~. We should understand -- what happens in laboratories today, shows up in your paycheck tomorrow. //

These programs are all prejudiced. That's right -- prejudiced. They are biased to the future -- loyal to our children. And we can make the investment with no new taxes, no budget busting spending.

The federal government already spends 1.4 trillion of your money every year. So I propose we set priorities. Cut back on mandatory spending today ... and do away with almost 250 government programs that don't simply work anymore.

One of my favorite singers is Randy Travis. Randy has a song that says, "our love would last forever." I'm not sure Randy would say the same thing about a taxpayer supported ~~federal~~ research program on the mating habits <sup>of</sup> ~~of~~ little minks. //

This Superconducting SuperCollider is a big part of my investment in America's future. <sup>where</sup> Once we reached for the moon above to explore new frontiers of our universe, soon we will begin to tunnel below to learn about the fundamental question of science --- how our universe began.

It's hard to explain the benefits to a layman like myself. One young scientist calls the SuperCollider "the scientific equivalent of that crazy new sport, ~~bungee-cord~~ bungee jumping." I

*It is the world's ~~most~~ greatest scientific project, a magnet for scientific genius from around the world*

guess what he means is that when it come to colliding atoms, it's not the experience itself that counts, but what you learn along the way.//

History has shown that pushing technology to ever higher levels of accomplishment brings immense practical consequences - -- *new jobs, even new industries, born of the discoveries that you will make.*

Some in Congress disagree. The House last month voted to shut to shut this project down, and the Senate may vote as soon as today. No one should be under any illusion, savings from killing the SuperCollider will not be used to reduce the deficit. Runaway spending is prohibited by the budget caps that I fought and won last year.

If Congress stops this project they will direct this investment to support organized ~~special~~ interests whose support they need in an election year. They will squander *taxpayer's* ~~your~~ money today, rather than invest in our economy and ~~our children~~ tomorrow. Make no mistake, this is a battle between the "patrons of the past," and the "architects of the *future* ~~people~~."

It may not be popular in all places, but I want to do what's right for America. Today I say: I stand with Texas. I stand with our future. I will fight for the SuperCollider.//

Five hundred years ago this week, a man named Columbus set sail on a journey that brought him to the shores of this great land. But in many respects, America's voyage is never-ending.

Centuries after Columbus set sail, our forebears tread this soil in wagon trains and two centuries after that, scientists at Johnson Space Center watched as brave Americans set sail for the stars.

Today, <sup>goto</sup> new frontiers beckon, new discoveries await, new progress lies before us. Our adventure is not the open ocean but rather to <sup>see</sup> the edge of the universe and the birth of space, <sup>to sail</sup> and Our vessel not called the Santa Maria but the Supercollider -- <sup>but</sup> human imagination is still our compass, and human ingenuity and yearning for progress our only power. <sup>I have authored</sup>

I believe you can trust these <sup>ideas</sup> ideas to carry our economy to calmer waters. Trust these ideas to change America, so that we may continue our eternal voyage to greatness.

Thank you for listening. God bless Texas, and God bless the United States of America.
