## Alert: Homeland Investment Act An Update

The Homeland Investment Act (HIA) is proposed legislation that will provide US corporations with a window of six months to one year to repatriate offshore earnings at a significantly reduced tax rate.

- ♦ We assign a greater than 50% probability to the proposed HIA legislation being enacted within this Congressional session.
- ♦ If enacted in its current form, we expect more than \$400 billion to be repatriated in 2004.
- ♦ Given that Congress is not expected to focus on the HIA until after the Medicare issue is addressed, corporations still have an opportunity to join the lobbying effort to ensure their particular tax situation is considered.
- ♦ Because the repatriation window is narrow and given the large amount of time required to properly structure transactions to realize the maximum benefit (and to structure the associated liability-management transactions), we encourage clients who have not already done so to initiate debt structuring preparations with our capital markets desk as soon as possible.
- ♦ We remain of the view that the impact on the USD will be both direct and indirect. With the recent decline in the US dollar, we think it is prudent to protect the shareholder value of non-USD assets, especially those that may be affected by this act.

### Background

The Homeland Investment Act proposes to amend the 1986 Internal Revenue Code with the objective of encouraging the re-investment of foreign earnings into the United States. **The bill proposes to reduce the applied tax rate on excess qualified foreign distributions from 35% to 5.25% for a period of one year.** Excess qualified foreign distribution is the excess of:

- ♦ Dividends received by the taxpayer during the taxable year from corporations that are controlled foreign corporations in which the taxpayer is a United States shareholder on the date such dividends are paid, over the base dividend amount.
- ♦ The base dividend amount means an amount not less than the average amount of dividends received during the fixed base period from corporations that are controlled foreign corporations in which the taxpayer is a United States shareholder on the date such dividends are paid.

The proposed effective date is the first taxable year of the electing taxpayer ending 120 days after the date of enactment.

If passed, we believe that dividend repatriation will be in excess of \$400 billion. The influx of capital into the US would be extremely beneficial across both the public and private sectors. Multi-national corporations (MNCs) participating in a recent survey have identified the following as probable areas to which they would allocate any repatriated HIA capital:

- ◆ Working capital, inventory, plant & equipment (30%)
- ◆ Reduction of debt (30%)
- ◆ Stock repurchase (10%)
- ◆ Contributions to under-funded pensions (5%)
- ◆ Portfolio investments (10%)
- ◆ M&A and other (15%)

We remain of the view that the impact of this act on the USD will be both direct and indirect. The direct impact will be the spot exchange required to convert non-USD cash into USD. Relative to the size of the market, the flows and timing will be both small and spread out. In addition, a significant percentage of the offshore accounts are already denominated in US dollars. Nonetheless, even if only 20–40% of \$400 billion or more is converted, this would still be a large number. Indirectly, repatriated HIA flows represent a significant amount of money relative to the trade balance. As seen above, HIA repatriated funds will be used to pay down debt and buy back stock, and the residual flows will at least temporarily be invested in short-term, high-quality securities.

On May 15, the Senate passed (75–25) its version of the HIA bill (S. 596). S 596 was included in the Senate's proposed tax and growth package. Despite strong bipartisan support, the bill was ultimately axed in the final compromise with the Administration, in which a decision was reached to more narrowly focus this year's tax bill.

### Legislative Strategy

**Take Away.** Given that Congress is not expected to focus on the HIA until after the Medicare issue is addressed, corporations still have an opportunity to join the lobbying effort to ensure their particular tax situation is considered. Note that a coalition of thirty companies (primarily from the technology and pharmaceutical industries) are the principal sponsors of this legislation. We believe that a broader corporate representation would greatly improve probability of passage. **Should you wish to join the coalition or find out more about it, please contact us.**

The HIA is expected to be wrapped into the International Tax Bill (ITB). The ITB has yet to be introduced, but this is expected to happen in the next month. Congress' first priority is to address the Medicare issue. We expect this to be resolved and signed by the Executive branch by month-end. Once Medicare has been addressed, we expect the ITB to be the next major issue on Washington's agenda.

A key ITB concern is the resolution of FSC/ETI (Foreign Sales Corps and the Extraterritorial Income Act of 2000). FSC/ETI's are US business vehicles that the WTO has ruled are illegal. In its November ruling, the WTO granted the EU the ability to levy \$4 billion in retaliatory tariffs on US exporters. Resolving the FSC/ETI will be a central goal of the International Tax Bill.

The next step will be to introduce the ITB (with the HIA provision included) and get it passed before the summer recess. For reference, Washington adjournment is in the October-November timeframe. We expect end of August to early September to be a critical period for this legislation. Ideally, the ITB will be passed this year, making dividend repatriation a 2004 event.

Several Washington lobbyists have indicated that Chairman Thomas' HIA proposal to be included in the ITB will have two key modifications from the original bill (H.R. 767):

- ◆ **An increase in the tax rates from 5.25% to 7%.** (Note: the Senate version still calls for 5.25%.)
- ◆ **A shortened repatriation window from twelve to six months.**

Washington recognizes the importance and positive economic implications of a large influx of capital. Thus, shortening the repatriation window is consistent with having a quick impact. Offsetting the "benefit" to a shortened window are 1) foreign tax credit sign-off (if needed); and 2) having a reasonably long enough period that ensures that all companies will have the time needed to execute an appropriate strategy. We do not expect the window to be lengthened, and we believe that it is extremely unlikely that the proposed short-term tax relief will be changed to permanent relief.

In addition to the probable allocations (above), we are also aware of companies conceptually discussing a one-time special dividend to shareholders from the repatriated HIA cash net of immediate needs. Although there are risks to this legislation, we still assign a greater than 50% probability of the HIA ultimately being enacted.

### Debt Strategy

**Take Away.** Given the narrow window in which corporations will be able to repatriate earnings—and timing needed to properly structure transactions to maximize the tax benefit and to structure the associated asset-liability management transactions—we encourage clients who have not already done so to initiate debt structuring preparations to take advantage of the HIA with our capital markets desk as soon as possible.

The passage of the legislation presents corporations that have significant "trapped" offshore earnings with three potential capital markets structuring opportunities:

1. **Maximizing value of HIA benefit via additional offshore issuance.** Issue proceeds will allow clients with offshore assets invested in illiquid assets to take full advantage of tax holiday that they might not otherwise have been able to. Similarly, even clients with offshore assets invested in liquid assets could maximize the benefit of the tax holiday by further leveraging their subsidiaries.
2. **Managing net investment exposure via additional offshore issuance.** Subject to local limitations regarding capitalization structure and the historical earnings and profits account (E&P), companies can reduce their consolidated net investment risk by issuing local currency denominated debt. In addition to maximizing the tax holiday afforded by the HIA, this structural move reduces overall balance sheet risk to the shareholders from exchange rate fluctuations.
3. **Structuring onshore liability management solutions with repatriated earnings.** Naturally, liability management solutions should be considered in conjunction with the expected wave of repatriated funds.

### FX Strategy

**Take Away.** We remain of the view that the impact on the USD will be both direct and indirect. Given the recent decline in the US dollar, we think it is prudent to protect the shareholder value of non-USD assets that are either in the form of cash or illiquid assets. For specific hedging strategies, please contact your foreign exchange sales advisor.

| <b>Total</b> | <b>407,261,265,000</b>        |

#### Notes

1. The amount of "Undistributed Earnings" is usually found in the tax note or occasionally in Note 1 (under the sub-header on taxes) in the audited financial statements, and is identified as either undistributed foreign earnings or permanently reinvested foreign earnings.
- 2) On the financial statements of some of these companies, the listed amount referred to a tax amount instead of an earnings amount. In these cases, we included this tax amount in the list above. It would be too subjective to assume a tax rate and gross up this tax amount to calculate the earnings amount. Since the tax amount would be less than the earnings amount, including the tax amount provided is consistent with our effort to be conservative in our estimate.
- 3) In those cases where the financial statements did not mention a specific undistributed foreign earnings amount but indicated that there were such earnings, we did not attempt to approximate the amount. We assumed zero to be conservative.

Special report

# Introducing the Homeland Investment Act

- **A tax change is proposed that temporarily reduces obstacles to repatriating accumulated foreign earnings of US corporations**
- **Legislation to produce results; repatriation estimated at \$300 billion**
- **Survey suggests that firms would use funds for varied purposes; shoring up corporate finances is the top priority**
- **Estimated increase in business spending to lift GDP growth 0.5%**
- **Budget impact is negligible**

## Introduction

Amid the current flurry of activity on US tax policy, it is easy to neglect the Homeland Investment Act. This tax proposal, which has bipartisan support, would remove many of the tax obstacles that inhibit repatriation of foreign earnings by US corporations. The intention of this legislation is to make it less costly to repatriate earnings that might be used for investment spending and hiring in the United States.

However, there is little analysis available that bears on the likely impact of this legislation. To fill this gap, this special report draws on existing company information and provides new survey material to give rough guidance as to the potential effects of the Homeland Investment Act. The analysis suggests that there is a large pool of reinvested foreign earnings that would be repatriated if this legislation were passed. JPMorgan estimates that the gross flow that would result from the passage of the pending legislation is roughly \$300 billion. This number is more than twice the estimate of the Joint Committee on Taxation made in 2001.

A survey of firms suggests that this money would be put to varied use. Shoring up balance sheets would be a central priority. JPMorgan estimates suggest that the legislation would lead to a roughly 3% reduction in nonfinancial corporate debt. An important part of the funds would be used to increase business activity. Estimates suggest a 2-3% increase in capital spending over two years, during which the GDP level would likely be boosted by roughly one-half of a percentage point. The impact of the legislation on the Federal Budget is likely to be negligible.

## Introducing the Homeland Investment Act

Legislation was recently introduced in both the House (H.R.767) and Senate (S.596) to temporarily change the tax treatment of US subsidiaries foreign earn-

ings. These bills, the Homeland Investment Act of 2003 and Invest in the USA Act of 2003, would temporarily reduce the US tax rate on foreign subsidiary earnings that are distributed to the United States parent company. Although the legislation has been proposed separately from the Bush administration's "jobs and growth" stimulus package, it is now being discussed as a possible element of this plan.

The current form of the proposed legislation reduces the tax rate to 5.25% on distributions in excess of a corporation's "normal" annual distribution, and would be effective for distributions made in either 2003 or 2004, depending on when the legislation becomes law.

The Senate Bill differs from the House version in requiring US corporations to provide a domestic reinvestment plan. This plan requires firms to describe how repatriated income will be reinvested in the United States. The Senate bill anticipates that an electing corporation's reinvestment plan would provide for use of the distributed cash as a source for funding worker hiring and training, infrastructure, research and development, capital investments and/or providing financial stability (of the corporation) for purposes of job retention or creation.

If the Homeland Investment Act becomes law on or before September 2, 2003, the temporary reduced tax rate will only apply to qualifying distributions made on or prior to December 31, 2003 for all calendar year taxpayers. This implies that any resulting capital flows would occur in a very short period of time. If the Act becomes law after September 2, 2003, the reduced tax rate would apply to distributions made during 2004 for calendar year taxpayers.

### Motivation for changing the law

Unlike most other industrial countries, current US tax law provides multinational firms with strong incentives to keep earnings from foreign operations outside the United States, even when efficiency considerations would argue that the funds be used within the United States.

Under international tax principles, primary jurisdiction to tax income is given to the country where the foreign subsidiaries operate. The accumulated earnings of a US corporation's foreign subsidiaries are generally not subject to US corporate income taxation until the earnings are actually distributed to the corporate parent as a dividend. As a general principle, US tax on repatriated income is imposed to bring the total corporate tax rate to 35%. In countries in which tax rates are below 35%, an additional US tax gener-

### A stylized example of tax law proposal

In this example, Acme International earns \$100 abroad and pays \$10 in foreign taxes. No US taxes are paid because earnings are not repatriated.

Under current law, if the profits were repatriated, the firm would also owe \$35 in US taxes and \$4.50 in additional foreign taxes for distributed earnings less a \$14.50 tax credit to offset the foreign corporate income tax and withholding tax paid. The additional tax cost of repatriating the \$90 is \$25.

Under the proposed law, the US corporate tax would be lowered by 85% from \$35 to \$5.25; the foreign tax credit would also be reduced by 85% to \$2.18, and Acme would still have to pay the \$4.50 foreign withholding tax on distributions. The tax cost to the firm of repatriating the \$90 in earnings to the United States is lowered by more than two-thirds from \$25 to \$7.57.

#### Example

|                           |       |
|---------------------------|-------|
| Foreign Taxable Income    | \$100 |
| 10% Foreign Corporate Tax | \$10  |
| Foreign Net Earnings      | \$90  |

#### Tax cost of repatriating foreign earnings

##### Under Current Law

|                         |         |
|-------------------------|---------|
| US Corporate Tax at 35% | \$35    |
| Foreign Tax Credit      | \$14.50 |
| Foreign Withholding Tax | \$4.50  |
| Additional Tax Burden   | \$25.00 |

##### Under Proposed Law

|                           |        |
|---------------------------|--------|
| US Corporate Tax at 5.25% | \$5.25 |
| Foreign Tax Credit        | \$2.18 |
| Foreign Withholding Tax   | \$4.50 |
| Additional Tax Burden     | \$7.57 |

### US corporations: profits earned abroad

billions of dollars

percent

ally is paid when earnings are repatriated. Thus, foreign investments financed with foreign earnings of US multinationals typically have been more attractive than returns on domestic investments financed with foreign earnings (after additional taxes are paid to repatriate the earnings). To be sure, US tax rules are far more complex than this short description suggests. Often they operate to create disincentives to repatriate foreign earnings even when tax rates abroad are high.

In lowering the tax rate to 5.25%, the cost of repatriating earnings is significantly reduced. Firms can repatriate funds at a lower tax rate and may receive a partial tax credit for taxes paid abroad. A stylized example presented in the accompanying box (previous page) makes this point clear. In the example, costs of repatriating earnings are cut by more than two-thirds.

Many firms have large pools of accumulated earnings from foreign operations but lack promising investment opportunities for use of the funds abroad. In particular, tax laws make it difficult to structure direct investments from one subsidiary to another. And while the US parent can generally borrow as an alternative to repatriating funds, the current environment is one in which firms have strong incentives to deleverage. Risk considerations should also promote repatriation. Absent a US tax bite, the risk of political change or shifting foreign tax regimes create disincentives for holding assets in many parts of the world.

The primary motivation of the change in the law is to allow firms to repatriate these foreign earnings to promote long-term growth. The hope is that some of these funds would be used in ways that boost US investment and hiring. That a reduction in the tax rate on repatriating earnings might have little if any net cost to the US Treasury is also appealing. There would be a net loss in revenues from firms that planned to repatriate earnings in the future and would now bring these funds home at a lower tax rate. However, firms that keep virtually all their foreign earnings abroad to avoid additional taxes under current law would have incentive to repatriate earnings currently under the proposal.

### **Foreign subsidiary earnings: a large pool exists**

Although the motivation of the legislation is clear, there is little information available to assess the likely size of inflows that will be generated under the new law and its macroeconomic effects.

### **Foreign undistributed earnings by credit rating**

|       | share of<br>undistributed earnings |
|-------|------------------------------------|
| AAA   | 22.9                               |

| BBB+  | 3.3                                |
| BBB   | 10.3                               |
| Lower | 8.8                                |

### **Foreign undistributed earnings by sector**

|                                 | share of<br>undistributed earnings |
|---------------------------------|------------------------------------|
| Manufacturing                   | 39.7                               |
| High tech and telecom           | 17.7                               |
| Pharmaceuticals and health care | 27.0                               |
| Consumer                        | 12.2                               |
| Energy                          | 9.6                                |
| Finance and insurance           | 6.5                                |
| Other                           | 5.0                                |

Note: Both tables based on the sample of 237 S&P 500 corporations that report reinvested foreign earnings.

The Joint Committee on Taxation analyzed a proposal similar to the current one in 2001. It estimated that repatriated earnings would rise by \$135 billion in the first year after legislation is effective. The estimated revenue impact was modest. A small positive \$4.1 billion gain in the first year was estimated to be temporary. Over ten years the legislation was estimated to reduce revenues by a net \$3.9 billion. The Joint Committee has provided little detail in how it arrived at these estimates.

JPMorgan's assessment of the Homeland Investment Act begins with an estimate of the size of the accumulated foreign subsidiary earnings that would be available for repatriation to the United States. In the audited financial statements of many S&P 500 corporations, the cumulative amounts of foreign subsidiary earnings that are permanently or indefinitely reinvested outside the US ( hereafter, reinvested foreign earnings) are disclosed.

These figures generally appear in the tax footnote to audited financial statements. They are available because, under

**JPMorgan Chase Bank, New York**

Anne Swope (1-212) 834-7566  
anne.swope@jpmorgan.com

GAAP, all corporations that consider all or some of their foreign subsidiary earnings as permanently or indefinitely reinvested outside the US—and therefore do not accrue a deferred tax liability—are required to disclose the amount in their audited financial statements.<sup>1</sup> Financial statements indicate that the reinvested foreign earnings of the S&P 500 corporations that could potentially be repatriated following passage of the Homeland Investment Act is \$406 billion.

Most of these earnings are held by companies with high credit ratings (tables, page 3). Based on S&P ratings, more than three fourths of the earnings are held by companies that are rated A or higher. Sectorally, manufacturing and pharmaceutical companies account for the largest concentration of accumulated foreign earnings, more than one-half of earnings held abroad.

There are good reasons to think that this \$406 billion figure underestimates the total pool of earnings that would be eligible for repatriation (box, page 4). Indeed, this view is confirmed by an alternative estimate based on IRS data for a larger sample of firms. Taken together, the total pool of reinvested foreign earnings eligible for repatriation is estimated at about \$500 billion.

### Survey points to large-scale repatriation

The existence of a large pool of reinvested foreign earnings provides little insight as to the likely size of repatriated funds under the tax plan. In order to estimate the likely effect of the legislation, an informal survey of large firms was conducted. The survey sampled tax and treasury departments of 28 firms. Their reinvested foreign earnings represent about one-quarter of the aggregate \$406 billion measured in the S&P 500 sample. The results of the survey highlight the following:

- **A strong incentive to repatriate.** Respondents representing slightly over half of the sample—both as a share of the number of respondents and as a share of reinvested foreign earnings—indicate that substantially all of their earnings would be repatriated. Most other companies indicated that some of their earnings would be repatriated. Only two respondents, accounting for about 8.7% of reinvested foreign earnings of the sample, did not plan to repatriate foreign earnings to the United States.

- **Cash flow and repatriation.** Adequate liquidity appears to be an important consideration for firms' willingness to repatriate. Firms with large cash balances globally appear more committed to repatriating all their reinvested foreign earn-

### \$500 billion in estimated retained foreign earnings

Financial statements show \$406 billion in accumulated foreign subsidiary earnings for the S&P 500. This figure likely underestimates the size of the total pool of foreign earnings that could potentially be repatriated.

- The S&P 500 is a subset of the entire corporate sector. S&P 500 operating earnings has recently averaged about 60% of overall after-tax earnings. Its share of foreign earnings is likely larger, although no official breakdown is available.

- The aggregate reinvested foreign earnings of corporations in the S&P 500 includes reinvested foreign earnings of only 237 corporations. The remaining 263 corporations did not overtly disclose reinvested foreign earnings. In some cases, the tax effects but not the total amount of foreign subsidiary earnings are disclosed. For our calculation, these companies are treated as if they have no reinvested foreign earnings.

- There are foreign subsidiary earnings that have not been repatriated but also not been treated as permanently reinvested. These earnings could also be repatriated if the bill becomes law.

An alternative exercise employs IRS data for the 7500 largest controlled foreign corporations for 1998 and points to accumulated foreign subsidiary earnings in 2002 of close to \$500 billion. This level appears consistent with a scaled up estimate from the smaller S&P sample.

### Survey results, repatriation of reinvested foreign earnings

percent of reinvested foreign earnings

### Estimate of repatriated earnings

billions of dollars

|                      | From Firms<br>Repatriating<br>Substantially All | From Firms<br>Repatriating<br>Some | Dollars<br>Repatriated |
|----------------------|-------------------------------------------------|------------------------------------|------------------------|
| Share of sample      | 50.3%                                           | 41.2%                              |                        |
| Percent repatriated: |                                                 |                                    |                        |
| Higher estimate      | 100%                                            | 60%                                | \$375                  |
| Lower estimate       | 80%                                             | 30%                                | \$265                  |

Note: Estimates are based on a JPMorgan survey of 28 firms accounting for roughly 25% of all accumulated earnings by the S&P 500 sample of very large firms.

<sup>1</sup> Corporations may change their reinvestment strategies, however, at which time deferred taxes may be required to be accrued.

ings. Corporations that do not have sufficient cash would have to borrow the cash at the foreign subsidiary level, liquidate operating assets, or distribute property, all of which have collateral consequences and make the decision significantly more complex. Liquidity is also significant as there would be cash taxes due on the distributed earnings. In addition to US taxes, most countries impose a withholding tax when earnings are distributed.

The results of the survey point to a substantial flow of repatriated foreign earnings (table, page 4). The estimates range from \$265- 375 billion.

The possibility that the survey sample is biased towards companies with high levels of liquidity— and therefore a greater proclivity to repatriate earnings— was also examined (top table, page 5). In the aggregate, companies in the survey sample do not appear to have a larger cash position relative to those in the broader S&P 500 sample. This finding holds when the data are aggregated such that repatriated flows are no larger than a corporation's available cash position.

In all, \$300 billion looks to be a reasonably conservative estimate of the magnitude of foreign earnings that could be repatriated under the proposed legislation. This estimate is more than twice as large as that produced by the Joint Committee on Taxation.

### **A modest boost to growth and deleveraging**

The ultimate intent of the Homeland Investment Act is to provide a boost to US macroeconomic performance. In considering the possible benefits of repatriating \$300 billion in foreign earnings, once again the survey provides guidance (bottom table, page 5). Most corporations point to shoring up corporate finances— buying back debt, increasing levels of liquid assets, rebuilding pension funds or even retiring equity— as a key priority for the use of these funds. However, a substantial number of corporations also indicate that a portion of the funds will be used to finance activity: capital spending, research and development, and the like.

There are no hard numbers on how the money would be allocated among these varied purposes. As a rough translation of the survey results, assume that 50% of the \$300 billion is used for debt repayment and 35% is used for spending— on research and development or capital expenditure— spread out over a two-year period. The remaining 15% remains in

### **S&P sample and survey group**

| Group          | \$ billion                  |                                |                                                                 |
|----------------|-----------------------------|--------------------------------|-----------------------------------------------------------------|
|                | Reinvested Foreign Earnings | Global Cash & Cash Equivalents | Lesser of Reinvested Foreign Earnings or Global Cash and Equiv. |
| S&P 500 sample | 407                         | 374                            | 193                                                             |
| Survey Group   | 102                         | 76                             | 59                                                              |

Note: The S&P sample represents the 237 corporations in the S&P 500 that disclose reinvested foreign earnings. The survey group represents the 28 corporations sampled by JPMorgan. The amount of global cash and cash equivalents for each company is the amount reflected on each company's audited financial statements. The aggregation of corporations using the lesser of their reported reinvested foreign earnings or global cash is reported in the last column.

### **Survey results: uses of repatriated funds**

survey of 28 firms; respondents could mention more than one use

|                                              | Number | Percent of respondents |
|----------------------------------------------|--------|------------------------|
| Pay down outstanding debt                    | 13     | 46                     |
| Finance capital spending                     | 11     | 39                     |
| Fund R&D, venture capital, or acquisitions   | 11     | 39                     |
| Buy back stock                               | 5      | 18                     |
| Use cash for working capital                 | 3      | 11                     |

cash or is used for stock buy-backs and shoring up pension funds.

Under these assumptions, \$150 billion of corporate debt would be paid down, equivalent to about 3% of total nonfinancial corporate debt. For many firms repatriating funds, the percentage reduction in debt would be much greater.

The share allocated to new expenditures amounts to about \$50 billion per year in new spending. At this magnitude, GDP would likely be boosted by about one half a percentage point. The biggest benefits would likely come in spending on equipment and software and new plant. The boost to the total national level of capital spending would be 2-3% in each of the two years.

Economic & Policy Research  
Introducing the Homeland Investment Act  
Page 6

### Budget impact is expected to be small

The effects of the proposed change in the tax law on the federal budget are likely to be relatively modest: positive in the short run and slightly positive in the longer run as well. Based on the estimate of the repatriated earnings, cash tax payments of roughly \$10-15 billion as a direct result of the legislation would accrue to the Treasury in the first year. This assumes an effective tax rate of 3.5-5.0%, after adjusting for foreign tax credits.

To the extent that some of the reinvested foreign earnings would have been distributed in the foreseeable future and taxed at the statutory rate of 35% absent the proposed legislation, the present value of the foregone taxes on these earnings (difference between 35% and 5.25%) would be a par-

tial offset to the \$10 billion to \$15 billion gain. Most likely, the past trend of earnings accumulating abroad would continue to prevail, and this partial offset would be minimal.

### Close to \$100 billion shift to dollar assets

Regarding the currency impact of the tax change, the key issue is the extent of the shift from nondollar to dollar assets that takes place. Anecdotal evidence gained from talking to US corporations suggest that a large portion of foreign earnings held abroad are held in US dollars. Although no hard information is available, a reasonable estimate places the dollar share of reinvested foreign earnings at between one-half and three-quarters. As a result, the repatriation of \$300 billion in foreign earnings is likely to produce a one-time currency shift of around \$100 billion.

1ST SESSION

**H.R. \_\_\_\_**

To amend the Internal Revenue Code of 1986 to encourage investing of surplus foreign earnings at home.

---

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY \_\_, 2003

Mr. ENGLISH introduced the following bill; which was referred to the  
Committee on Ways and Means

---

## **A BILL**

To amend the Internal Revenue Code of 1986 to encourage investing of surplus foreign earnings at home.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

### **SECTION 1. SHORT TITLE**

This Act may be cited as the "Homeland Investment Act of 2003".

### **SEC. 2. TOLL CHARGE ON EXCESS QUALIFIED FOREIGN DISTRIBUTION AMOUNT.**

Subchapter N of the Internal Revenue Code of 1986 is amended by adding at the end the following new section:

#### **SEC. 965. TOLL CHARGE IMPOSED ON EXCESS QUALIFIED FOREIGN DISTRIBUTION AMOUNT**

- (a) **TOLL CHARGE IMPOSED ON EXCESS QUALIFIED FOREIGN DISTRIBUTION AMOUNT.** – If a taxpayer elects the application of this section, a tax shall be imposed on the taxpayer in an amount equal to 5.25 percent of (i) the excess qualified foreign distribution amount and (ii) the amount determined under section 78 that is attributable to such excess qualified foreign distribution amount. Such tax shall be imposed in lieu of the tax imposed under section 1 or 11 on such amounts.

(b) EXCESS QUALIFIED FOREIGN DISTRIBUTION AMOUNT. –

(1) IN GENERAL. – The term “excess qualified foreign distribution amount” means the excess (if any) of –

(A) dividends received by the taxpayer during the taxable year from corporations that are controlled foreign corporations in which the taxpayer is a United States shareholder on the date such dividends are paid, over

(B) the base dividend amount.

(2) BASE DIVIDEND AMOUNT. – The term “base dividend amount” means the average amount of dividends received during the fixed base period from corporations that are controlled foreign corporations in which the taxpayer is a United States shareholder on the date such dividends are paid.

(3) FIXED BASE PERIOD. –

(A) IN GENERAL – The term “fixed base period” means each of 3 taxable years which are among the 5 most recent taxable years of the taxpayer ending on or before December 31, 2002, determined by disregarding:

- i. the one taxable year for which the corporation had the highest amount of dividends from controlled foreign corporations relative to the other 4 taxable years, and
- ii. the one taxable year for which the corporation had the lowest amount of dividends from controlled foreign corporations relative to the other 4 taxable years.

(B) SHORTER PERIOD. – If the taxpayer has fewer than 5 taxable years ending on or before December 31, 2002, then in lieu of applying subparagraph (b)(3)(A), the fixed base period shall mean such shorter period representing all of the taxable years beginning on or before December 31, 2002.

Rules similar to the rules of section 41(f)(3) shall apply in the case of acquisitions or dispositions of controlled foreign corporations beginning after the fixed base period.

(c) DEFINITIONS AND SPECIAL RULES. –

- (1) DIVIDENDS. – For purposes of this section, the term “dividend” means a dividend as defined in section 316, except that the term shall also include amounts described in section 951(a)(1)(B), and shall exclude amounts described in section 78.
- (2) CONTROLLED FOREIGN CORPORATIONS AND UNITED STATES SHAREHOLDERS. – For purpose of this section, the term “controlled foreign corporation” shall have the same meaning as under section 957(a) and the term “United States shareholder” shall have the same meaning as under section 951(b).
- (3) FOREIGN TAX CREDITS. – The amount of any income, war, profits, or excess profits taxes paid (or deemed paid under sections 902 and 960) or accrued by the taxpayer with respect to the excess qualified foreign distribution amount for which a credit would be allowable under section 901 in the absence of this section shall be reduced by 85 percent.
- (4) FOREIGN TAX CREDIT LIMITATION. – For all purposes of section 904, there shall be disregarded 85 percent of (i) the excess qualified foreign distribution amount, and (ii) the amount determined under section 78 that is attributable to such excess qualified foreign distribution amount.
- (5) TREATMENT OF CONSOLIDATED GROUPS. – Members of an affiliated group of corporations filing a consolidated return under section 1501 shall be treated as a single taxpayer in applying the rules of this section.
- (6) DESIGNATION OF BASE DIVIDEND AMOUNT. – The taxpayer shall designate the particular dividends received during the taxable year from one or more controlled foreign corporations in which it is a United States shareholder that are dividends excluded from the excess qualified foreign distribution amount. The total amount of such designated dividends shall equal the base dividend amount.

(d) ELECTION. –

- (1) IN GENERAL. – An election under this section shall be made on the taxpayer’s timely filed income tax return for the taxable year (determined by taking extensions into account) and, once made, may be revoked only with the consent of the Secretary.

- (2) **ALL CONTROLLED FOREIGN CORPORATIONS.** – The election shall apply to all controlled foreign corporations in which the taxpayer is a United States shareholder during the taxable year.
- (3) **CONSOLIDATED GROUPS.** – If a taxpayer is a member of an affiliated group of corporations filing a consolidated return under section 1501 for the taxable year, an election under this section shall be made by the common parent of the affiliated group which includes the taxpayer, and shall apply to all members of the affiliated group.
- (e) **REGULATIONS.** – The Secretary shall prescribe such regulations as may be necessary and appropriate to carry out the purposes of this section, including regulations under section 55 and regulations addressing corporations that, during the fixed base period or thereafter, join or leave an affiliated group of corporations filing a consolidated return.
- (f) **EFFECTIVE DATE.** – The amendments made by this section shall apply only to the first taxable year of the electing taxpayer ending 90 days after the date of enactment.

Dear Mr. President:

We write to express our support for your economic growth package. As CEOs of the nation's leading information technology companies we commend you on your leadership in constructing this proposal and in offering the nation a package that is responsive to our current economic situation.

As Congress considers this proposal, we know that there will be opportunities to consider adding provisions to the package. We look forward to these discussions with you, your administration and the Congress.

The package you have presented is one that we support and we look forward to working with you toward its enactment. We congratulate you on your proposals and stand prepared to assist in any way we can.

Sincerely,

Michael Dell

## **DO REPATRIATION TAXES MATTER? EVIDENCE FROM THE TAX RETURNS OF U.S. MULTINATIONALS**

### **ABSTRACT**

An open question in the literature on the taxation of multinational corporations is whether repatriation taxes influence whether the profits of foreign subsidiaries are repatriated or reinvested abroad. Theoretical models suggest that dividend remittances should not be influenced by repatriation taxes. The results of recent empirical work indicate that dividend remittances are sensitive to repatriation taxes. This paper investigates whether the empirical evidence can be reconciled with the theoretical results by recognizing that repatriation taxes on dividends may vary over time and provide firms with an incentive to time repatriations so that they occur in years when repatriation tax rates are relatively low. We use information about cross-country differences in tax rates to separately estimate the influence of permanent tax changes, as would occur due to changes in statutory tax rates, and transitory tax changes on dividend repatriations. Our data contains U.S. tax return information for a large sample of U.S. corporations and their foreign subsidiaries. We find that the permanent tax price effect is significantly different from the transitory price effect and is not significantly different from zero, while the transitory tax price effect is negative and significant. This suggests that repatriation taxes do affect dividend repatriation behavior but only to the extent that they vary over time. Previous empirical work has apparently measured the effect of timing behavior.

*JEL Classification:* H32, H25, H87.

1

An open question in the literature on the taxation of multinational corporations is whether taxes due on repatriation of foreign source income influence whether the profits of foreign subsidiaries are repatriated or reinvested abroad. Theoretical arguments by Hartman (1985) suggest that dividend payments by foreign subsidiaries should not be influenced by such repatriation taxes. Under this view, which is analogous to the "new view" of dividend taxation applied to domestic firms, taxes due upon repatriation are unavoidable costs for "mature" foreign subsidiaries that finance investment out of retained earnings.<sup>1</sup> As a result, investment and dividend payment decisions are unaffected by those taxes. The results of recent empirical work that used cross-sectional data on U.S. multinationals seem to contradict Hartman's theoretical result. These studies indicate that dividend remittances are sensitive to repatriation taxes. This presents a puzzle.

Hartman's analysis (and the "new view" of dividend taxation) is based on the assumption that taxes on dividends are constant over time. This paper investigates whether the empirical evidence can be reconciled with the theoretical results by recognizing that repatriation taxes on dividends may vary over time. This variability may provide firms with an incentive to repatriate relatively more profits from a subsidiary when the tax cost of doing so is temporarily relatively lower than normal, and to retain more profits when the tax cost of repatriation is higher than normal.<sup>2</sup> Such timing behavior could be revealed in cross-sectional data by a relationship between dividend payout levels and the current level of the tax cost of dividend payments, when the actual relationship is between dividend payout levels and the current level of the tax cost *relative* to its normal level. If timing opportunities are important to dividend payout decisions, then it becomes difficult to interpret the tax effects estimated in previous papers. In particular, these estimates will tend to confuse the effects of permanent tax changes, as would occur due to changes in statutory tax rates, with the effects of tax changes due to transitory changes in the situation of the taxpayer.

It is important to distinguish whether cross-sectional differences between subsidiaries in dividend payout behavior are due to the current level of the tax cost of paying dividends or the difference between the current and the normal, or expected future, tax cost. Making this distinction will help us evaluate the effects of tax policy on the location of investment, the form of finance, and tax revenues. More specifically, it has implications for the evaluation of policies such as the reduction of withholding tax rates in bilateral tax treaties and the repeal of the deferred taxation that foreign profits generally enjoy in the United States. The policy implications of this work are discussed in more detail in the final section of the paper.

Micro data can be used to distinguish the effects of transitory variation in tax costs from the effects of permanent differences in tax costs. This paper uses a recently created data set containing U.S. tax return information for a large sample of U.S. corporations and their foreign subsidiaries. For some of our empirical work, we link the subsidiary-specific data across time to create a panel data set. To our knowledge, this is the largest panel data set in existence that contains tax information on multinationals. It is also the only panel data set that has detailed tax information on both the parent corporations and their foreign subsidiaries.

We use information about cross-country differences in tax rates to estimate separate effects for the permanent and transitory components of the tax price of dividend repatriation. The idea is that variations across countries in average repatriation tax prices or in statutory tax rates will be correlated with the permanent component of tax price variation, but uncorrelated with transitory variations. Using these measures to construct instrumental variables for the tax price allows us to separately identify permanent and transitory tax price effects. Our estimation strategy is similar to that of Burman and

Randolph (1993), who used state tax rates as instruments to separate permanent from transitory effects of taxes on capital gains realizations.

To preview our results, we find that the permanent tax price effect is significantly different from the transitory price effect and is not significantly different from zero, while the transitory tax price effect is negative and significant. This suggests that previous cross-sectional analysis has measured the effect of timing behavior, either through tax planning that affects both the tax price and dividend payments or through companies timing their repatriations to take advantage of exogenous transitory variations in tax prices.

The remainder of the paper is organized as follows. Section I briefly reviews Hartman's analysis, the related empirical literature, and some more recent theoretical work in this area. Section II derives the tax price of a dividend repatriation, Section III presents the empirical model, and Section IV describes the data. Results are presented in Section V, followed by concluding remarks.

## **I. The Hartman Analysis and Subsequent Studies**

The United States system for taxing the income earned by the foreign subsidiaries of U.S. corporations defers taxation of foreign income until it is brought back to the United States and provides a credit for foreign taxes paid.<sup>3</sup> Under this credit and deferral system, the two main forms of repatriation tax that a firm incurs on income remitted from a foreign subsidiary are the residual home country tax liability (if any) not offset by the foreign tax credit, and any withholding tax imposed by the source country. Hartman (1985) argued that, under a credit and deferral tax system, the repatriation tax on foreign source income is irrelevant to the investment and dividend payment decisions of foreign subsidiaries that are financed through retained earnings ("mature" subsidiaries). Hartman's insight was

Status report

## Homeland Investment Act: Still alive and kicking

- **Homeland Investment Act (HIA) was not included as part of the growth and jobs bill**
- **It is now being considered as part of international tax legislation**
- **Homeland Investment Act has high-level political backing**
- **There is a good chance of passage this year – to give the economy a lift before the 2004 elections**

The Homeland Investment Act (HIA) is still alive and kicking. Since the release of JPMorgan's special report on the potential impact of the HIA on the U.S. economy (*Introducing the Homeland Investment Act*, May 1, 2003) there has been quite a bit of activity surrounding this proposed legislation on Capital Hill. Although the Act has not been passed, it is still under active consideration as part of a broader bill covering international tax law and has very high level Congressional backing. Events could move very quickly from here, and political negotiations this summer will be watched very carefully.

### **Legislative status: still under active consideration**

The Homeland Investment Act (HIA) was actively considered as part of this year's fiscal stimulus package, but was not included in the end. The HIA was included in the Senate version of the growth and stimulus bill by a vote of 75 to 25, surprising many and sending an important signal of bipartisan support. However, the HIA was not included in the House growth and stimulus bill, even though it is believed to have significant House support, particularly in the House Ways and Means Committee. The HIA was stripped from the final growth and stimulus package passed by Congress and signed by President Bush.

But Congressional leaders are still pushing for passage of the HIA. The HIA is expected to be reintroduced by House Ways and Means Chairman Thomas (R-CA) as part of international tax legislation after the July 4th recess. The broader international tax legislation to be introduced by Chairman Thomas addresses the repeal of the foreign sales corporation/extraterritorial income exclusion provisions ("FSC/ETI") currently part of US international tax law, ruled an illegal trade subsidy by the WTO. Alternative legislation addressing the repeal of the FSC/ETI provisions has already been introduced to the House by Reps. Crane (R-IL) and Rangel (D-NY).

**Economic & Policy Research**

**The Homeland Investment Act: Still alive and kicking**

Page 2

Supporters of these competing proposals will have to find common ground before FSC/ETI repeal legislation reaches the House floor

The EU has set a January 1, 2004 deadline for the US to abolish the FSC/ETI provisions to avoid \$4 billion in sanctions. While Congress will work hard to meet this deadline, the Congressional calendar is crowded and passage of FSC/ETI repeal legislation may not be possible prior to the announced late October adjournment. If international tax legislation is passed this year we understand that the HIA will most likely be included as part of the package. Senator Ensign (R-NV) is simultaneously leading an effort to include the HIA in other unrelated legislation, in the event that the international tax legislation referred to above is delayed.

**Political considerations argue for passage this year**

As written, the HIA must be passed prior to Congress's summer recess late in July to be effective for 2003. How-

ever, if the legislation is passed after the summer recess (following Labor Day) the effective date could be modified so that the HIA would nevertheless be effective for 2003

We believe the 2004 elections are a factor in the HIA's chances for passage. If the HIA is passed and is effective for 2003 (for calendar year corporations) the repatriation of an estimated \$300 billion could occur before year end. The economic impact of this substantial inbound flow of funds over a relatively short period of time would likely to boost the economy in advance of the 2004 elections.

Repatriated funds paid through to consumers via dividend/extraordinary dividends (given the passage of the growth and stimulus legislation taxing dividends at new capital gain rates) would have an even more immediate impact on consumer spending and wealth

If the bill is effective for 2004, the inbound flow of funds would likely occur over a longer period and the impact on the US economy would not be felt until late 2004 and 2005, after the elections

Special report

# Introducing the Homeland Investment Act

- **A tax change is proposed that temporarily reduces obstacles to repatriating accumulated foreign earnings of US corporations**
- **Legislation to produce results; repatriation estimated at \$300 billion**
- **Survey suggests that firms would use funds for varied purposes; shoring up corporate finances is the top priority**
- **Estimated increase in business spending to lift GDP growth 0.5%**
- **Budget impact is negligible**

---

## Introduction

Amid the current flurry of activity on US tax policy, it is easy to neglect the Homeland Investment Act. This tax proposal, which has bipartisan support, would remove many of the tax obstacles that inhibit repatriation of foreign earnings by US corporations. The intention of this legislation is to make it less costly to repatriate earnings that might be used for investment spending and hiring in the United States.

However, there is little analysis available that bears on the likely impact of this legislation. To fill this gap, this special report draws on existing company information and provides new survey material to give rough guidance as to the potential effects of the Homeland Investment Act. The analysis suggests that there is a large pool of reinvested foreign earnings that would be repatriated if this legislation were passed. JPMorgan estimates that the gross flow that would result from the passage of the pending legislation is roughly \$300 billion. This number is more than twice the estimate of the Joint Committee on Taxation made in 2001.

A survey of firms suggests that this money would be put to varied use. Shoring up balance sheets would be a central priority. JPMorgan estimates suggest that the legislation would lead to a roughly 3% reduction in nonfinancial corporate debt. An important part of the funds would be used to increase business activity. Estimates suggest a 2-3% increase in capital spending over two years, during which the GDP level would likely be boosted by roughly one-half of a percentage point. The impact of the legislation on the Federal Budget is likely to be negligible.

## Introducing the Homeland Investment Act

Legislation was recently introduced in both the House (H.R.767) and Senate (S.596) to temporarily change the tax treatment of US subsidiaries foreign earn-

Introducing the Homeland Investment Act  
Page 2

ings. These bills, the Homeland Investment Act of 2003 and Invest in the USA Act of 2003, would temporarily reduce the US tax rate on foreign subsidiary earnings that are distributed to the United States parent company. Although the legislation has been proposed separately from the Bush administration's "jobs and growth" stimulus package, it is now being discussed as a possible element of this plan.

The current form of the proposed legislation reduces the tax rate to 5.25% on distributions in excess of a corporation's "normal" annual distribution, and would be effective for distributions made in either 2003 or 2004, depending on when the legislation becomes law.

The Senate Bill differs from the House version in requiring US corporations to provide a domestic reinvestment plan. This plan requires firms to describe how repatriated income will be reinvested in the United States. The Senate bill anticipates that an electing corporation's reinvestment plan would provide for use of the distributed cash as a source for funding worker hiring and training, infrastructure, research and development, capital investments and/or providing financial stability (of the corporation) for purposes of job retention or creation.

If the Homeland Investment Act becomes law on or before September 2, 2003, the temporary reduced tax rate will only apply to qualifying distributions made on or prior to December 31, 2003 for all calendar year taxpayers. This implies that any resulting capital flows would occur in a very short period of time. If the Act becomes law after September 2, 2003, the reduced tax rate would apply to distributions made during 2004 for calendar year taxpayers.

### Motivation for changing the law

Unlike most other industrial countries, current US tax law provides multinational firms with strong incentives to keep earnings from foreign operations outside the United States, even when efficiency considerations would argue that the funds be used within the United States.

Under international tax principles, primary jurisdiction to tax income is given to the country where the foreign subsidiaries operate. The accumulated earnings of a US corporation's foreign subsidiaries are generally not subject to US corporate income taxation until the earnings are actually distributed to the corporate parent as a dividend. As a general principle, US tax on repatriated income is imposed to bring the total corporate tax rate to 35%. In countries in which tax rates are below 35%, an additional US tax gener-

### A stylized example of tax law proposal

In this example, Acme International earns \$100 abroad and pays \$10 in foreign taxes. No US taxes are paid because earnings are not repatriated.

Under current law, if the profits were repatriated, the firm would also owe \$35 in US taxes and \$4.50 in additional foreign taxes for distributed earnings less a \$14.50 tax credit to offset the foreign corporate income tax and withholding tax paid. The additional tax cost of repatriating the \$90 is \$25.

Under the proposed law, the US corporate tax would be lowered by 85% from \$35 to \$5.25; the foreign tax credit would also be reduced by 85% to \$2.18, and Acme would still have to pay the \$4.50 foreign withholding tax on distributions. The tax cost to the firm of repatriating the \$90 in earnings to the United States is lowered by more than two thirds from \$25 to \$7.57.

#### Example

|                           |       |
|---------------------------|-------|
| Foreign Taxable Income    | \$100 |
| 10% Foreign Corporate Tax | \$10  |
| Foreign Net Earnings      | \$90  |

#### Tax cost of repatriating foreign earnings

##### Under Current Law

|                         |           |
|-------------------------|-----------|
| US Corporate Tax at 35% | \$35      |
| Foreign Tax Credit      | (\$14.50) |
| Foreign Withholding Tax | \$4.50    |
| Additional Tax Burden   | \$25.00   |

##### Under Proposed Law

|                           |          |
|---------------------------|----------|
| US Corporate Tax at 5.25% | \$5.25   |
| Foreign Tax Credit        | (\$2.18) |
| Foreign Withholding Tax   | \$4.50   |
| Additional Tax Burden     | \$7.57   |

### US corporations: profits earned abroad

billions of dollars

percent

ally is paid when earnings are repatriated. Thus, foreign investments financed with foreign earnings of US multinationals typically have been more attractive than returns on domestic investments financed with foreign earnings (after additional taxes are paid to repatriate the earnings). To be sure, US tax rules are far more complex than this short description suggests. Often they operate to create disincentives to repatriate foreign earnings even when tax rates abroad are high.

In lowering the tax rate to 5.25%, the cost of repatriating earnings is significantly reduced. Firms can repatriate funds at a lower tax rate and may receive a partial tax credit for taxes paid abroad. A stylized example presented in the accompanying box (previous page) makes this point clear. In the example, costs of repatriating earnings are cut by more than two-thirds.

Many firms have large pools of accumulated earnings from foreign operations but lack promising investment opportunities for use of the funds abroad. In particular, tax laws make it difficult to structure direct investments from one subsidiary to another. And while the US parent can generally borrow as an alternative to repatriating funds, the current environment is one in which firms have strong incentives to deleverage. Risk considerations should also promote repatriation. Absent a US tax bite, the risk of political change or shifting foreign tax regimes create disincentives for holding assets in many parts of the world.

The primary motivation of the change in the law is to allow firms to repatriate these foreign earnings to promote long-term growth. The hope is that some of these funds would be used in ways that boost US investment and hiring. That a reduction in the tax rate on repatriating earnings might have little if any net cost to the US Treasury is also appealing. There would be a net loss in revenues from firms that planned to repatriate earnings in the future and would now bring these funds home at a lower tax rate. However, firms that keep virtually all their foreign earnings abroad to avoid additional taxes under current law would have incentive to repatriate earnings currently under the proposal.

### **Foreign subsidiary earnings: a large pool exists**

Although the motivation of the legislation is clear, there is little information available to assess the likely size of inflows that will be generated under the new law and its macroeconomic effects.

### **Foreign undistributed earnings by credit rating**

|       | share of<br>undistributed earnings |
|-------|------------------------------------|
| AAA   | 22.9                               |

Note: Both tables based on the sample of 237 S&P 500 corporations that report reinvested foreign earnings.

The Joint Committee on Taxation analyzed a proposal similar to the current one in 2001. It estimated that repatriated earnings would rise by \$135 billion in the first year after legislation is effective. The estimated revenue impact was modest. A small positive \$4.1 billion gain in the first year was estimated to be temporary. Over ten years the legislation was estimated to reduce revenues by a net \$3.9 billion. The Joint Committee has provided little detail in how it arrived at these estimates.

JPMorgan's assessment of the Homeland Investment Act begins with an estimate of the size of the accumulated foreign subsidiary earnings that would be available for repatriation to the United States. In the audited financial statements of many S&P 500 corporations, the cumulative amounts of foreign subsidiary earnings that are permanently or indefinitely reinvested outside the US ( hereafter, reinvested foreign earnings) are disclosed.

These figures generally appear in the tax footnote to audited financial statements. They are available because, under

GAAP, all corporations that consider all or some of their foreign subsidiary earnings as permanently or indefinitely reinvested outside the US—and therefore do not accrue a deferred tax liability—are required to disclose the amount in their audited financial statements.<sup>1</sup> Financial statements indicate that the reinvested foreign earnings of the S&P 500 corporations that could potentially be repatriated following passage of the Homeland Investment Act is \$406 billion.

Most of these earnings are held by companies with high credit ratings (tables, page 3). Based on S&P ratings, more than three fourths of the earnings are held by companies that are rated A or higher. Sectorally, manufacturing and pharmaceutical companies account for the largest concentration of accumulated foreign earnings, more than one-half of earnings held abroad.

There are good reasons to think that this \$406 billion figure underestimates the total pool of earnings that would be eligible for repatriation (box, page 4). Indeed, this view is confirmed by an alternative estimate based on IRS data for a larger sample of firms. Taken together, the total pool of reinvested foreign earnings eligible for repatriation is estimated at about \$500 billion.

### Survey points to large-scale repatriation

The existence of a large pool of reinvested foreign earnings provides little insight as to the likely size of repatriated funds under the tax plan. In order to estimate the likely effect of the legislation, an informal survey of large firms was conducted. The survey sampled tax and treasury departments of 28 firms. Their reinvested foreign earnings represent about one-quarter of the aggregate \$406 billion measured in the S&P 500 sample. The results of the survey highlight the following:

- A strong incentive to repatriate. Respondents representing slightly over half of the sample—both as a share of the number of respondents and as a share of reinvested foreign earnings—indicate that substantially all of their earnings would be repatriated. Most other companies indicated that some of their earnings would be repatriated. Only two respondents, accounting for about 8.7% of reinvested foreign earnings of the sample, did not plan to repatriate foreign earnings to the United States.

- Cash flow and repatriation. Adequate liquidity appears to be an important consideration for firms' willingness to repatriate. Firms with large cash balances globally appear more committed to repatriating all their reinvested foreign earn-

### \$500 billion in estimated retained foreign earnings

Financial statements show \$406 billion in accumulated foreign subsidiary earnings for the S&P 500. This figure likely underestimates the size of the total pool of foreign earnings that could potentially be repatriated.

- The S&P 500 is a subset of the entire corporate sector. S&P 500 operating earnings has recently averaged about 60% of overall after-tax earnings. Its share of foreign earnings is likely larger, although no official breakdown is available.

- The aggregate reinvested foreign earnings of corporations in the S&P 500 includes reinvested foreign earnings of only 237 corporations. The remaining 263 corporations did not overtly disclose reinvested foreign earnings. In some cases, the tax effects but not the total amount of foreign subsidiary earnings are disclosed. For our calculation, these companies are treated as if they have no reinvested foreign earnings.

- There are foreign subsidiary earnings that have not been repatriated but also not been treated as permanently reinvested. These earnings could also be repatriated if the bill becomes law.

An alternative exercise employs IRS data for the 7500 largest controlled foreign corporations for 1998 and points to accumulated foreign subsidiary earnings in 2002 of close to \$500 billion. This level appears consistent with a scaled up estimate from the smaller S&P sample.

|----------------------|-------------------------------------------------|------------------------------------|------------------------|
| Share of sample      | 50.3%                                           | 41.2%                              |                        |
| Percent repatriated: |                                                 |                                    |                        |
| Higher estimate      | 100%                                            | 60%                                | \$375                  |
| Lower estimate       | 80%                                             | 30%                                | \$265                  |

Note: Estimates are based on a JPMorgan survey of 28 firms accounting for roughly 25% of all accumulated earnings by the S&P 500 sample of very large firms.

1. Corporations may change their reinvestment strategies, however, at which time deferred taxes may be required to be accrued.

ings. Corporations that do not have sufficient cash would have to borrow the cash at the foreign subsidiary level, liquidate operating assets, or distribute property, all of which have collateral consequences and make the decision significantly more complex. Liquidity is also significant as there would be cash taxes due on the distributed earnings. In addition to US taxes, most countries impose a withholding tax when earnings are distributed.

The results of the survey point to a substantial flow of repatriated foreign earnings (table, page 4). The estimates range from \$265- 375 billion.

The possibility that the survey sample is biased towards companies with high levels of liquidity— and therefore a greater proclivity to repatriate earnings— was also examined (top table, page 5). In the aggregate, companies in the survey sample do not appear to have a larger cash position relative to those in the broader S&P 500 sample. This finding holds when the data are aggregated such that repatriated flows are no larger than a corporation's available cash position.

In all, \$300 billion looks to be a reasonably conservative estimate of the magnitude of foreign earnings that could be repatriated under the proposed legislation. This estimate is more than twice as large as that produced by the Joint Committee on Taxation.

### **A modest boost to growth and deleveraging**

The ultimate intent of the Homeland Investment Act is to provide a boost to US macroeconomic performance. In considering the possible benefits of repatriating \$300 billion in foreign earnings, once again the survey provides guidance (bottom table, page 5). Most corporations point to shoring up corporate finances— buying back debt, increasing levels of liquid assets, rebuilding pension funds or even retiring equity— as a key priority for the use of these funds. However, a substantial number of corporations also indicate that a portion of the funds will be used to finance activity: capital spending, research and development, and the like.

There are no hard numbers on how the money would be allocated among these varied purposes. As a rough translation of the survey results, assume that 50% of the \$300 billion is used for debt repayment and 35% is used for spending— on research and development or capital expenditure— spread out over a two-year period. The remaining 15% remains in

### **S&P sample and survey group**

| \$ billion     |                             |                         |                                            |
|----------------|-----------------------------|-------------------------|--------------------------------------------|
| Group          | Reinvested Foreign Earnings | Global                  | Lesser of Reinvested                       |
|                |                             | Cash & Cash Equivalents | Foreign Earnings or Global Cash and Equiv. |
| S&P 500 sample | 407                         | 374                     | 193                                        |
| Survey Group   | 102                         | 76                      | 59                                         |

Note: The S&P sample represents the 237 corporations in the S&P 500 that disclose reinvested foreign earnings. The survey group represents the 28 corporations sampled by JPMorgan. The amount of global cash and cash equivalents for each company is the amount reflected on each company's audited financial statements. The aggregation of corporations using the lesser of their reported reinvested foreign earnings or global cash is reported in the last column.

### **Survey results: uses of repatriated funds**

survey of 28 firms; respondents could mention more than one use

| Fund underfunded pension fund                | 1          | 4           |

cash or is used for stock buy-backs and shoring up pension funds.

Under these assumptions, \$150 billion of corporate debt would be paid down, equivalent to about 3% of total nonfinancial corporate debt. For many firms repatriating funds, the percentage reduction in debt would be much greater.

The share allocated to new expenditures amounts to about \$50 billion per year in new spending. At this magnitude, GDP would likely be boosted by about one half a percentage point. The biggest benefits would likely come in spending on equipment and software and new plant. The boost to the total national level of capital spending would be 2-3% in each of the two years.

Introducing the Homeland Investment Act  
Page 6

### Budget impact is expected to be small

The effects of the proposed change in the tax law on the federal budget are likely to be relatively modest: positive in the short run and slightly positive in the longer run as well. Based on the estimate of the repatriated earnings, cash tax payments of roughly \$10-15 billion as a direct result of the legislation would accrue to the Treasury in the first year. This assumes an effective tax rate of 3.5-5.0%, after adjusting for foreign tax credits.

To the extent that some of the reinvested foreign earnings would have been distributed in the foreseeable future and taxed at the statutory rate of 35% absent the proposed legislation, the present value of the foregone taxes on these earnings (difference between 35% and 5.25%) would be a par-

tial offset to the \$10 billion to \$15 billion gain. Most likely, the past trend of earnings accumulating abroad would continue to prevail, and this partial offset would be minimal.

### Close to \$100 billion shift to dollar assets

Regarding the currency impact of the tax change, the key issue is the extent of the shift from nondollar to dollar assets that takes place. Anecdotal evidence gained from talking to US corporations suggest that a large portion of foreign earnings held abroad are held in US dollars. Although no hard information is available, a reasonable estimate places the dollar share of reinvested foreign earnings at between one-half and three-quarters. As a result, the repatriation of \$300 billion in foreign earnings is likely to produce a one-time currency shift of around \$100 billion.
