Resource Totals.....	4,858.7	689.2	620.6	5,479.2		1,513.6	3,519.7	228.8

Notes:

¹ Amounts appropriated in P.L. 103-75, including contingent amounts that have been released.

² Complete breakout by state not yet available.

³ \$600 million was provided by P.L. 102-368 for unspecified disaster relief. Some of those funds were used to provide assistance to victims of the Midwest Flooding.

⁴ Total amount shown here; FEMA data will be broken out by category as soon as possible.

NASA/FEMA REMOTE SENSING SYSTEM TO SPEED DISASTER RELIEF

NASA and the Federal Emergency Management Agency (FEMA) are exploring a cooperative venture to test and implement a prototype remote sensing system that will acquire, process and distribute photographic-like digital images of disaster-damaged areas to response and recovery officials in near-real time.

"In past disasters, NASA's role has been to assist FEMA by providing aerial photographs to enhance their recovery operations and assessment of area damage. This joint venture will enhance the technology and process to enable FEMA, state and local officials to obtain information more quickly to manage disaster recovery operations," said Fred Gregory, Associate Administrator, NASA's Office of Safety and Mission Assurance, Headquarters, Washington, D.C.

"In addition, the fully implemented technology will be made available to commercial providers of aerial photographic services in order to expand their capability to provide images in near-real time and where needed," Gregory said.

The new system is designed to give response personnel critical information about the location and magnitude of a disaster within hours of acquisition instead of days or weeks. The system will utilize advanced imaging systems, a telemetry system to relay the images to the ground and a mobile ground station to receive and construct aerial maps for use in the field.

"Since 1974, U.S. Presidents have declared 400 major disasters. This new system will optimize current technology so that fire and police units and first aid and rescue personnel can provide even faster aid and protection to people and property, " said FEMA Director James Lee Witt.

Producing and distributing images of disasters sites using current technology is a slow and labor-intensive process requiring anywhere from 3-10 days to actually get an image to a specific geographical location. The process involves the acquisition of the image, relaying the image to the ground for processing, then distributing the image to rescue personnel. Although the present process is time consuming, the information is invaluable to recovery operations that usually take weeks or months to complete.

Personnel from NASA's Ames Research Center, Mountain View, Calif., and John C. Stennis Space Center, Miss., previously have assisted FEMA and local governments by providing photographs and digital images. Since the early 1980's, NASA's Ames' high altitude ER-2 aircraft has used telemetry to transmit infrared images to ground personnel to map forest fires and to perform damage assessment in Hawaii following Hurricane Iniki. Ames also flew its C-130 aircraft to map the "California Firestorms of 1993" with an infrared scanner that sees through thick smoke.

In August 1992, the NASA Learjet was sent to South Florida to take photographic-like digital images of the areas hit hardest by Hurricane Andrew. The data from the imagery assisted Florida officials in assessing damage done by the storm and provided information to rescue teams about damage to homes, commercial structures and the conditions of roadways.

Recently, NASA's Ames and Stennis centers provided photographs taken over six Midwest cities hard hit by the Mississippi River flood. The ER-2 and C-130 aircraft also surveyed areas of Southern California devastated by the Northridge earthquake. In both cases, the photographs were used to construct maps and update information systems used to distribute critical resources into the affected areas.

"The use of remote sensing imagery has proven critical in FEMA's quick response to recent disasters and will increasingly be used to improve the federal government's situation assessment capabilities," said Witt.
