version

Enron is one of the world's leading providers of clean natural gas and electricity and a leading developer of safe and reliable energy infrastructure. Why? Because we're committed to developing unique solutions that make communities around the world better places to live and work. To achieve this goal, we sponsor programs that benefit the environment and protect our natural resources.

Welcome to ABB's environment website pages!

The most important item is our latest Environmental Management Report (for 1999), issued in February, 2000. This is now fully laid out on our website for easy reading.

Simply click on the chapter headings in the menu column to the left of this page.

By clicking on the other bars at the top of this page you will find further information on our environmental activities:-

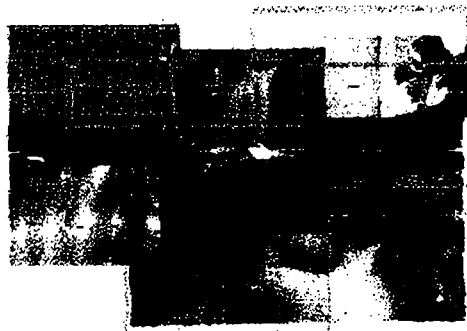

- a latest roundup of **News** items which give interesting examples of ABB's day-to-day efforts to enhance our global environment
- a selection of **Articles & Speeches** on environmental topics by ABB's President and senior management
- information from ABB's **Energy & Global Change** department, located in our Corporate Research Center in Switzerland, with the task of monitoring and understanding global environmental issues and investigating possible future changes in the field of energy

To order a hardcopy of the report, please contact:- Michael Robertson.

If you wish to take a copy electronically, you can open the report as a PDF-file (This may take some time, as the size of the file is 4MB).

Highlights 99

Highlights 99

- A sharp focus on products characterized 1999. Most of the 23 Business Areas completed their first environmental product declarations. They describe the environmental aspects of ABB core products over their whole life cycle, including environmental goals and programs.
- The Environmental Affairs organization within ABB was broadened by the appointment of 23 Business Area Environmental Controllers, responsible for the environmental performance of their core products and Business Area activities.
- In five seminars, more than 150 Business Area personnel were trained in the EcoLab life cycle assessment tool - a prerequisite for the production of environmental product declarations.
- To contribute to a "carbon-restrained world," ABB has invested resources supporting the World Energy Council in the launch of its program to reduce greenhouse gas emissions by 1 billion tons of carbon dioxide by 2005 - an initiative first proposed by ABB's President and CEO, Göran Lindahl.
- At the end of 1999, ABB came close to implementing the ISO 14001 environmental management system in all of its manufacturing and service facilities. The number of sites that have implemented ISO 14001 has increased to 519, corresponding to 96 percent of the total.
- Five more operational performance indicators have been added, increasing the number to 33.
- The President's message in the 1998 report and a synopsis of the complete report were translated into 22 languages and distributed widely throughout the Group.
- Environmental statements were produced to serve as the basis for all relevant internal and external communication activity. These are now published on the "Environment" pages of ABB's website.

The ABB Group

ABB is a global technology company serving customers in power transmission; power distribution; automation; oil, gas, and petrochemicals; industrial products and contracting; and financial services. The company has its headquarters in Switzerland and employs about 165,000 people in more than 100 countries. The joint venture ABB ALSTOM POWER[®] serves power generation customers.

ABB fulfills its commitment to sustainable development by developing and supplying ecoefficient products and systems, sharing state-of-the-art technologies with emerging markets, contributing to common efforts to protect the environment, and continuously improving its own environmental performance.

Stewardship in Environmental, Health and Safety

At Raytheon, ethics and integrity are an integral part of everything we do: the way we build products and provide services, the way we treat our customers, suppliers, and each other. Our commitment to ethics and integrity extends as well to protection of our environment--for our co-workers, our neighbors and ourselves. Our environmental, health and safety beliefs are as follows:

- **Respect for the environment - embedding environmental thinking in everything we do.** Raytheon's goal is to put respect for the environment in the hands and hearts of our people - through an environmental ethics training program, an environmental, health, and safety audit program, Principles of Environmental Quality, and most importantly, through the focused commitment of employees worldwide. The results: major reductions in chemical emissions, including achievement four years ahead of time of the emission reduction goal for the Environmental Protection Agency's "33/50" Program, for which Raytheon received the EPA's Hammer Award in 1996; and conversion from ozone-depleting solvent to a citrus-based cleaner, terpene, to clean circuit boards. In addition, we were gratified to receive in 1996 the Massachusetts Association of Conservation Commissions' award and the National Security Industrial Association's Environmental Achievement Award. Raytheon is committed to maintaining this momentum.
- **Respect for all employees** - Recognizing the value of our fellow employees, the value of their ideas, and the strength that comes with diversity. The goal is to create a work environment where Raytheon's employees thrive--and work together as a team. We encourage our employees to use safe and environmentally responsible practices at work and home.
- **Community Involvement** - Being an active member of the many communities in which we live and work. In 1996, Raytheon made numerous charitable contributions directed toward grass roots support for environmental initiatives. These initiatives cover a broad spectrum of needs including education, watershed management, and land management and preservation. In addition, Raytheon supports respected national environmental organizations such as the Nature Conservancy.

Practicing environmental awareness is the right way to do business, the smart way to do business and, at Raytheon, it is the only way to do business.

Dennis J. Picard

Chairman & Chief Executive Officer

Energy to Serve Your World™

Preserving Our Environment

Southern Company is America's largest electric utility and one of the world's leading independent power producers. Through our five companies in the southeastern United States - Alabama Power, Georgia Power, Gulf Power, Mississippi Power and Savannah Electric - we serve more than 3.7 million customers. And with our Southern Energy Inc. subsidiary, we improve the quality of life for millions more all over the world with the energy we provide.

We are concerned about how the production and use of energy affect the environment and believe we have a responsibility to minimize our environmental impact. That's why we've become a leader in finding new, cleaner ways to produce electricity. While we're reducing emissions, we're also keeping costs down - our rates are currently 19 percent below the national average. Read more, below.

Weyerhaeuser In Action

In the Environment

We hold ourselves to the highest standards of ethical conduct and environmental responsibility.

Weyerhaeuser's commitment to the environment

Weyerhaeuser's core value of citizenship includes supporting the communities where we do business, holding ourselves to the highest standards of ethical conduct and environmental responsibility, and communicating openly with employees and the public.

The company strategically manages its environmental performance to embody those values. Employees work to conserve resources; operate efficiently; manufacture quality products; develop long-term partnerships with customers, suppliers, government agencies and the public.

Weyerhaeuser strives to always comply with legal and regulatory mandates. In addition, the company often performs better than the minimum requirements to meet customer of community expectations.
