READ:22-JAN-1996 15:30:06.10

TEXT:

[[DECMAIL.LST : 3616 in DECMAIL.LST]]

Another test for the attachment...This is actually the mailing list you sent me for the recommendations. Per Scott, I have deleted all the Council members. Also, I have added a salutation field. There were two names Scott asked to be deleted -- David Root (died) and Steve Tisch (did not attend).

I also changed the mailing list so that there were the same number of fields in each of the records (otherwise it wouldn't have merged correctly.)

Scott added one line to the letters going to the Panelists. He said there were 10 of them, but only marked seven -- Barr, Cotton, Gonsalves, Isbell, Lowe, Moshoyannis, and Wilson. Do you know if these are correct and who the other three are? (The two "INTRO" people he marked were Mitzman and Sasser.)

So far, there is only one hotel we have found that has the meeting space and government per diem sleeping room rate available April 24 - 26 -- the Savoy Suites in Georgetown. I have never dealt with this hotel before, so I am going to take a look at it before recommending it or going forward...I'll let you know if we find anything else....

Hope this works....

"New Issue Update: Advanced Viral"

Investor's Business Daily (01/23/96) P. A6

Advanced Viral Research Corp. of Hallandale, Fla. has submitted research to the National Medical Honor Societies in Washington, D.C. that indicates its antiviral drug Reticulose has been found to have inhibitory effects on HIV. Reticulose, which has proven effective against other viral diseases, is a non-toxic antiviral drug.

"Across the USA: Indiana"

USA Today (01/23/96) P. 8A

A 2-day lobbying workshop for leaders of AIDS assistance programs finishes in Indianapolis today in a session where participants will address their legislators.

"Book Review: Mary Fisher, Living Proof"

Washington Post (01/23/96) P. E1; Graham, Jim

In this book review of Mary Fisher's memoir, "My Name is Mary" and a collection of her speeches entitled "I'll Not Go Quietly," Jim Graham, executive director of the Whitman-Walker Clinic, says that the books are about the impact of AIDS and a search for self. When Fisher got AIDS from her second husband, she was an uncommon example of an AIDS patient. Her father, Max Fisher, was "the most influential Jewish Republican in America" who supported Nixon and Ford. She spoke about fighting AIDS at the 1992 Republican National Convention and was appointed by President Bush to the National AIDS Commission. Graham says "Mary is best when she voices her human experience of AIDS: a mother's love or her sons, her caring words for friends."

"Judge Curbs Insurance Firm's 'Viatical' Deals"

Washington Post (01/23/96) P. C3; Crenshaw, Albert B.

A federal judge ordered one of the largest U.S. insurance firms that buys life insurance policies from terminally ill people to stop selling investment contracts based on those policies until it complies with U.S. securities laws. About 30 companies are in the "viatical settlement business," which became popular in the 1980s as a result of the spread of AIDS. Life Partners Inc. of Waco, Tex. buys rights to the life insurance of terminally ill people and sells investment contracts based on those policies. In 1994 the Securities and Exchange Commission (SEC) accused the company of selling unregistered securities and a U.S. District Judge agreed. The judge allowed the company to continue the practice while the SEC worked out a compliance arrangement. Last fall the SEC said the company's changes were not sufficient, and the judge told the company to stop selling settlements to investors until they complied with the SEC rules.

"Prescription-Drug Disclosure Set Back"

Wall Street Journal (01/23/96) P. B7; Schultz, Ellen E.

A federal judge ruled in a Colorado case that an employer's requirement that employees reveal their prescription-drug use is in violation of the Americans With Disabilities Act (ADA). The

employer in the case, the Cheyenne Mountain Conference Resort in Colorado Springs, had ordered employees to tell supervisors what prescription medications they take. The judge said that practice violates the ADA which stipulates that an inquiry must be job-related and consistent with business necessity to be legal. The resort contended that supervisors have a valid need to know about medications, and cited drivers as an example. The resort manager said he won't appeal the judge's decision, however. The plaintiff also argued that the rule was an invasion of privacy, but that argument was rejected by the judge. In a similar 1994 California case, the Court of Appeals said the requirement to disclose prescription-drug information was an invasion of privacy and violated the ADA. "If the applicant responds that he or she is taking AZT, insulin, or tamoxifen, the employer has, in effect, been informed that the applicant has been diagnosed as being HIV-positive, or having diabetes or breast cancer," the court said.

"BC-Vietnam-Abuse"

Reuters (01/22/96); Edwards, Adrian

AIDS is a growing problem in Vietnam, where 200 people have died of AIDS and more than 3,400 are infected with HIV. The World Health Organization estimates that several hundred thousand more will be infected within three years. At Thu Duc's Binh Trieu drug-addiction center--the only such facility in southern Vietnam--1,786 cases of HIV-infection have been reported since January 1993. Among them, 135 have AIDS. The center is poorly staffed and not well-equipped to deal with the large volume of AIDS patients. Vietnam is one of the world's poorest countries, and health care is crude. The social and political environment in Vietnam also ostracizes drug addicts and AIDS patients from society.

"Caremark International Inc.:Fourth-Quarter Loss Seen Due to \$52 Million Charge"

Wall Street Journal (01/23/96) P. B4

Caremark International Inc. said it will suffer a fourth-quarter loss as a result of the lower value of Coram Healthcare Corp. securities that Caremark obtained in selling its home-infusion business to Coram last April. Caremark said the charge would be about 69 cents per share, or \$52 million. The securities had an original face value of \$112 million and were part of the \$300 million-plus price it had received from Coram for selling the business. Home-infusion involves the treatment of people at home with intravenous therapy and nutrition.

"HealthGate Data Unveils HealthGate, the First World Wide Web Medical Information System for Consumers"

Business Wire (01/22/96)

HealthGate Data Corp. has initiated the first World Wide Web network to provide consumers with global access to biomedical, healthcare and wellness databases, journals, and textbooks. HealthGate offers access to 11 databases such as MEDLINE, which provides medical and healthcare information; AIDSLINE, a

catalogue of AIDS-related articles and research; and CANCERLIT, a database of cancer journals. Starting at Healthgate's web site, users can reach the Medical Library's basic services and Patient and Consumer Health Information.

"Several New Drugs Shift Direction of Treatment and Research for HIV/AIDS"

Journal of the American Medical Association (01/10/96) Vol.275, No.2, P. 89; Voelker, Rebecca

New drugs for HIV and AIDS create new treatment options, but leave doctors and drug companies with little knowledge of how the drugs should be used. Experts agree that combination therapy is better than AZT monotherapy, and currently five nucleoside analogs--which inhibit the production of reverse transcriptase--are now available to treat HIV infection. Drugs like saquinavir, recently approved by the Food and Drug Administration (FDA), inhibit the protease enzyme. More drugs of both types are on the way, but already doctors are struggling with questions about when to begin drug therapy, what drugs to use, and what physical points treatment should be based on--viral load, CD4 cell counts, or clinical condition. Dr. Ellen Cooper, vice president and director of clinical research and information at the American Foundation for AIDS Research, proposes a large, ongoing trial to take these factors into account and determine the best time and therapy for initiation of treatment and to compare promising combinations. Experts disagree on how much weight should be given to surrogate marker data, compared to clinical endpoint results. With accelerated approval, the FDA approves new AIDS drugs in 24 weeks or less, based on surrogate marker data. Clinical end point studies, however, take 5 years or more, so that the questions posed in the trial could be irrelevant by the time the data are analyzed.

"Xenotransplantation at a Crossroads: Prevention Versus Progress"

Nature Medicine (01/96) Vol.2, No.1, P. 18; Allan, Jonathan S.

In a Nature Medicine commentary, Jonathan Allan voices his concerns about forthcoming guidelines from the Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention for cross-species transplantation in humans. Allan served on the FDA panel that considered the guidelines and spoke about the risks of infectious disease related to baboon transplants at meetings at Institute of Medicine and the FDA. He says he is concerned that the proposed guidelines "will not significantly reduce the risk of introducing a new human disease through xenotransplantation." Furthermore, he states that the regulations should be similar to those for gene therapy, but that, under the proposed rules, xenotransplants would come under mostly local regulation, and there would be little federal oversight. He also contends that the guidelines lack "real safeguards against the introduction and spread of new infectious diseases in the human population." Allan notes that baboons carry viruses that can infect humans and argues that the animals should not be used as donors for humans. In conclusion, Allan writes that pigs should be the only outside species used for

human transplants and that federal regulations should be strict,
including licensing and inspections.

Carol is hosting a farewell party for Marion on Thursday, January 25, at noon in OEOB Room 211. You all are cordially invited to attend.

It will be a bring your own (brown bag) lunch. Soft drinks will be ordered from Mess. Staff who can bring desserts are welcome to do so. Please let me know what you will be able to bring in case "encouragement" requests are needed.

Carol also wishes staff to bring an appropriate (even funny) gift for Marion that will be useful for his new endeavor.

Marion knows about the lunch and is looking forward to attending.

Let me know if you have any questions.

THANKS!

Pat

Eva --

This is a note about substance and process -- and since you are the lucky person whose e-mail address I have, you get this! It appears that Bob Fogel, a member of the Presidential Advisory Council on HIV/AIDS, made direct contact with Gary West and John Ward about an issue related to names reporting. I want all of you to know that this was a violation of the protocol to which the Council agreed. All Council inquiries are supposed to come through this office -- so that agencies are not bombarded with requests from 30 different offices. I think Bob did this in all good faith -- he was getting requests from local folks about CDC policy on names reporting. We will make every effort to keep this under control from our end; you might want to advise your staff that any Council-related inquiries should be coming through this office rather than directly from Council members. Now to the substance of what Bob Fogel says he was told. Bob was left with the impression that CDC supports states adopting names reporting. I was unaware of a CDC policy in this regard; I thought this was being left up to the states. I would appreciate clarification in this regard. One of the ongoing issues we have faced is that CDC is providing additional funds to support the extra work associated with names reporting. Some health departments are seeing this as a loss of funds if they don't adopt a reporting policy. How much money is actually set aside from the surveillance dollars to support names reporting activities? Finally, as part of the Performance Partnership Grants proposal, all the funding streams going to health departments are merged -- and the community planning process would be able to influence decisions about how surveillance money is spent. Is any thought being given to this simplification through administrative means? (The effect of this is that states would not feel they are "losing" money by not adopting names reporting; they could make the decision on its merits and have "as much" money as any other comparable jurisdiction for surveillance activities.) Thanks for your help with this. Jeff

January 23, 1996

MEMORANDUM FOR GREG SIMON AND SKILA HARRIS

FROM: Patsy Fleming

SUBJECT: Issues for Discussion of Meeting with Drug Industry

(1) Why do we need this meeting?

There is considerable concern within the scientific and AIDS communities that research efforts for both treatments and preventive approaches are stymied due to insufficient interest or investment on the part of the private sector and/or difficulties in creating a more cooperative relationship between the Federal government and industry.

(2) What is principal objective/outcome of the meeting?

To discuss and identify an appropriate division of labor between the federal government and the private sector in the development of therapeutics, vaccines, and microbicides. In effect, we want to identify what each sector does best and how the federal government can improve its response and remove any obstacles to the private sector undertaking its role.

(3) Should we focus on both treatment and prevention issues?

There are important issues associated with both areas of research that require careful consideration. Some of these issues overlap (e.g., criteria for approval, difficulties working within a government

-run clinical trials system, profitability); others are more specific to the area of

research. But this is an important opportunity to lay all these issues on the table at one time.

(4) What issues are the companies likely to raise?

(a) Obstacles to vaccine development. (These are primarily developmental issues, not marketing issues.)

(i) need for financial assistance with research and development in the form of grants, cooperative research and development agreements, tax credits, or other fiscal incentives

(ii) assistance with access to clinical trial sites

TOP EVEN

Memo re Meeting with Drug Industry/January 23, 1996/Page \p

(iii) financial assistance with clinical trials

(iv) harmonization of international regulatory procedures for vaccine approval (including surrogate marker issues, how to define success for regulatory purposes)

(v) assistance in assembling intellectual property rights

(vi) guaranteed procurement of vaccine

(vii) establishment of an HIV vaccine injury compensation program

(viii) cumbersome working through NIH clinical trials system??

(ix) coordination between NIH and DOD efforts???

(b) Obstacles to therapeutics. (What is needed to increase private sector investment in new areas of treatment?)

(i) full approval based on surrogate markers (i.e., no Phase III trials required after accelerated approval)

(ii) speed up approval process even more

(iii) cumbersome working with NIH clinical trials system

(iv) pediatrics issues

(v) pregnancy issues

(vi) international purchase

(vii) tax incentives

(viii) indemnification

(5) Who should be invited to the meeting and why?

(a) what is reasonable size (keep at least two slots open for last

-minute additions -- people we forgot or people we must add for political reasons)

(b) criteria:

(i) companies already in the field and working with the

TOP ODD

Memo re Meeting with Drug Industry/January 23, 1996/Page \p
government

(ii) companies already in the field and not working with the government

(iii) companies not in the field but could or should be

(need to review NIH, FDA, and OHAP list to categorize the suggestions)

NIH list plus:

Genentech
CellGeneSys
Genetics Institute
Gilead
microbicide developer(s)

Others expressing interest:

ALZA
IMREG
Nexstar
Immune Response

(6) Who should come from the government?

Phil Lee, Assistant Secretary for Health
Harold Varmus, Director of NIH
David Kessler, FDA Commissioner
William Paul, Director of Office of AIDS Research, NIH
Anthony Fauci, Director, NIAID
Richard Klausner, Director, NCI
Donald Burke, DOD

(7) Should we include anyone from the Presidential Advisory Council? (We are tapped out on travel money.)

Scott Hitt, chair
Alexandra Levine, chair of research subcommittee
Bruce Weniger

(8) Additional steps for preparation

(a) Determining what we can offer at start of meeting;
assessment of likely options at end through meeting with relevant government folks to agree on what can be offered and potential follow up steps (Varmus, Kessler, Paul, et al.)

(b) preparatory meeting between government representatives and representatives of invited CEOs.

(9) Date for meeting with company reps and meeting with CEOs

(a) who sends invites?

(b) briefing materials?

Eva --

This is a note about substance and process -- and since you are the lucky person whose e-mail address I have, you get this!

It appears that Bob Fogel, a member of the Presidential Advisory Council on HIV/AIDS, made direct contact with Gary West and John Ward about an issue related to names reporting. I want all of you to know that this was a violation of the protocol to which the Council agreed. All Council inquiries are supposed to come through this office -- so that agencies are not bombarded with requests from 30 different offices. I think Bob did this in all good faith -- he was getting requests from local folks about CDC policy on names reporting. We will make every effort to keep this under control from our end; you might want to advise your staff that any Council-related inquiries should be coming through this office rather than directly from Council members.

Now to the substance of what Bob Fogel says he was told. Bob was left with the impression that CDC supports states adopting names reporting. I was unaware of a CDC policy in this regard; I thought this was being left up to the states. I would appreciate clarification in this regard.

One of the ongoing issues we have faced is that CDC is providing additional funds to support the extra work associated with names reporting. Some health departments are seeing this as a loss of funds if they don't adopt a reporting policy. How much money is actually set aside from the surveillance dollars to support names reporting activities?

Finally, as part of the Performance Partnership Grants proposal, all the funding streams going to health departments are merged -- and the community planning process would be able to influence decisions about how surveillance money is spent. Is any thought being given to this simplification through administrative means? (The effect of this is that states would not feel they are "losing" money by not adopting names reporting; they could make the decision on its merits and have "as much" money as any other comparable jurisdiction for surveillance activities.)

Thanks for your help with this.

Jeff

PRINTER FONT 12_POINT_COURIER

Interdepartmental Task Force on HIV/AIDS

Biomedical and Behavioral Research Working Group

Annotated Agenda

January 25, 1996

Welcome and Introductions Patsy Fleming

President's desire to make clear nation's commitment to finding a cure and a vaccine; Interdepartmental Task Force is appropriate mechanism to assure coordination and coherence in approach to biomedical and behavioral research.

Charge to the working group Carol Rasco

This is an issue of great importance to the President; he is eagerly awaiting the outcome of this effort to create a government

-wide plan and budget for AIDS research. Even in difficult fiscal times, his commitment to funding AIDS research is clear -- this is why the President wants to see in the plan both the scientific opportunities available to us and the cost associated with them.

The President has shown great personal interest in both the progress of the NIH and the DOD efforts. The President was

serious about the quick turnaround needed for this effort.
While he spoke of 90 days from December 6th, given the
furlough and the snow, we will now consider the clock
ticking -- I hope you can meet or beat that objective.

(April 15th??)

Introduction of Bill Paul Patsy
Fleming

Pleased to have Bill Paul chairing this effort; our goal
today is to agree on a process for developing this plan
along with a timeline.

Proposed Process Bill
Paul

Description of NIH planning process; how to adapt to
interdepartmental approach and limited timeline.

I am working on getting you an update on our timelines for various projects -- adolescent report, etc.

One question: In speaking with OMB about review of the national plan (now called a national strategy --- plans go on bookshelves, strategies are implemented)...Richard Turman raised the question of coordination of release of the plan with the (delayed) release of the budget. The plan will not call for new spending -- though it identifies priorities for existing funding. Apparently the annual drug strategy is being delayed for the budget -- do we need to worry about this. Our current thinking is that we could have this out before the budget (the real one, not the Feb. 5th one).

What do you think? Thanks.

"Some Donors Have a Cause in Mind"

New York Times (01/24/96) P. B2; Jay, Sarah

Many donors to the New York Times Neediest Cases Fund specify that their donation be used to help fight AIDS. Leslie Lane and Alan Vorchheimer said they wanted their \$250 to be used for AIDS patients because they have had friends who died of AIDS, and hope to see more done to fight the disease. The Klein family of Manhattan wanted their \$650 to go to homeless children and children with AIDS. The fund's total, currently \$3.7 million, goes to help New Yorkers in a variety of ways.

"Red Cross Takes Aim at Inquiry Lawyers"

Toronto Globe and Mail (01/23/96) P. A1; Picard, Andre

The Canadian Red Cross Society brought action last week against the judge and lawyers who led the public inquiry into the Canadian tainted blood tragedy. More than 1,200 hemophiliacs and transfusion recipients were infected with the AIDS virus as a result of the tainted blood. The group claimed in federal court that Justice Horace Krever did not have the authority to say that some individuals and groups could be singled out for blame. The Red Cross asserts that the notices of misconduct issued by the judge should be quashed, that the council that participated in the public hearings not be allowed to help Krever prepare his final report or make any findings of misconduct public. They also say the lawyers at the inquiry took a "prosecutorial and adversarial stance." If the judge is allowed to issue notices of misconduct, they say, they will "suffer injury and damage, including harm to their reputations." A lawyer for the group Canadian Hemophiliacs Infected with HIV-AIDS said the legal action was "appalling" and an attempt to "ensure that the public never knows the facts of this horrible scandal."

"Gilead Sciences Announces Completion of European..."

Healthwire (01/23/96)

Gilead Sciences, Inc. reported on Tuesday that their application for authorization to market Vistide for the treatment of cytomegalovirus (CMV) retinitis in AIDS patients has been accepted by the European Medicines Evaluation Agency. CMV retinitis is the most common viral opportunistic infection in AIDS patients, affecting about 95 percent of people with AIDS. The agency, which will coordinate review of the application, authorizes human therapeutic products for marketing in all member states of the European community. The application includes safety data from Phase I/II studies and an ongoing study of the drug in previously untreated patients with CMV retinitis that is being conducted by the Studies of the Ocular Complications of AIDS research group. These data were also used for a New Drug Application to the U.S. Food and Drug Administration for marketing of Vistide for CMV retinitis in the U.S. The drug is now available in the U.S. and Canada free of charge through a treatment IND expanded access program for patients with relapsing CMV retinitis.

"Bio Fluorescent Technologies Expands Peruvian Trials for its Rapid Assay Tests for the Detection of the HIV 1/2 Viruses"
Business Wire (01/23/96)

Bio Fluorescent Technologies Inc. announced on Tuesday that it is expanding the Peruvian trials of its seven-minute rapid assay test for HIV 1/2. The trials, originally set up to include the Peruvian navy department, will include the army and police departments. The current trials will fulfill the country's administrative requirements and qualify the product for purchase by the Armed Services of Peru. The company expects sales to double to 1.5 million units during 1996. These projections do not include over the counter sales or private sector sales.

"NeXstar Pharmaceuticals' AmBisome Receives First..."
Business Wire (01/23/96)

NeXstar Pharmaceuticals announced on Tuesday that AmBisome has been approved by the Australian Therapeutic Goods Administration as a primary therapy for systemic fungal infections with candida, aspergillus and cryptococcus, and for visceral leishmaniasis. This is the first time the drug has been approved as a primary therapy for treating life-threatening fungal infections. The company says it will seek similar approvals worldwide for the drug.

"Risk Factors for HIV-1 Seroconversion Among Young Men in Northern Thailand"
Journal of the American Medical Association (01/10/96) Vol.275, No.2, P. 122; Celentano, David D.; Nelson, Kenrad E.; Suprasert, Somboon; et. al.

Celentano et al. conducted a study to determine the incidence of HIV-1 infection in northern Thailand and to identify behavioral and sociodemographic risk factors for seroconversion among young men. A total of 2,413 men aged 19 to 23 from northern Thailand, inducted into the Royal Thai Army and Air Force, were followed for two years, and evaluated by interview and serology every six months. Of the 1,932 participants that were seronegative at enrollment, 85 men seroconverted to HIV-1 over the observation period. Factors associated with seroconversion were frequency of visits to female prostitutes, sex with men, and incident sexually transmitted diseases. Condom use provided some protection against HIV, although not in multivariate analysis. The authors concluded that, to decrease HIV-infection in Thailand, programs to increase condom use by prostitutes are necessary, as are efforts to extend condom use to other partners.

"Texas, Mexico Health Officials Join Forces to Fight TB"
Nation's Health (01/96) Vol.26, No.1, P. 8

Texas and Mexico health officials signed an agreement in November to join forces to fight tuberculosis on both sides of the border. The agreement recognizes the problems of cross-border travel and controlling disease. The pact provides for training for health care workers, improving data collection and analysis and sharing laboratory services. Those who are found to have tuberculosis will be treated and tracked to confirm that they completed the

treatment.

"Indian Supreme Court Demands Cleaner Blood Supply"

Lancet (01/13/96) Vol.347, No.8994, P. 114; Kumar, Sanjay

In an attempt to ensure a safer blood supply in India, and lessen malpractice, malfunctioning and corruption in the nation's blood banking system, the Indian Supreme Court has told the government to create a National Council for Blood Transfusion. Justices advised the government to enact separate legislation for regulating the collection, processing, storage, distribution, and transportation of blood and the operation of blood banks. The order also called for all of India's blood banks to be licensed within a year. A quarter of them are currently unlicensed. Other provisions include ending the professional sale of blood within 2 years, verifying that trained drug inspectors check the banks, and allowing 100 percent exemption on income tax to people donating money to the banks. The court's directive came in response to a petition filed by Common Cause, a non-governmental organization, against the government agencies that deal with blood safety. Their petition was based on a Health Ministry report that revealed the poor condition of the nation's blood bank system. Among other things, most blood banks were not testing for transmissible infections. About 15 percent of the people known to have HIV in India are either blood donors or blood-product recipients.

"Bob Gallo's New Weapon Against AIDS"

Business Week (01/15/96) No.3458, P. 87; Carey, John

Dr. Robert C. Gallo, who was being investigated for possible misconduct by the National Institutes of Health and the House Energy and Commerce Committee a few years ago, is now back on track--he will head a new Institute of Human Virology at the University of Maryland, and his lab has recently identified natural HIV-fighting chemicals. This discovery will "open up a whole new avenue for thinking about how to control HIV," he says. Gallo's encouraging discovery is one of many during the past year, adding new information about the virus and drugs to be used against it. Gallo feels so confident about the developments that he predicts, "AIDS will be a clinically curable disease in the next 10 years." Last year, scientists proved that HIV starts attacking the body immediately, wearing down the immune system gradually, instead of remaining dormant for years, as was previously thought. This discovery led some researchers to begin thinking that bolstering the immune system might be more effective than anti-HIV drugs, to which the virus becomes resistant. Gallo's identification of chemokines, natural chemicals that suppress the virus, is a major step toward strengthening immunity. Now the race is on to learn how the chemicals work and to develop drugs to recreate their anti-HIV action in the body.

"Book Review: Understanding HIV-Negative Gay Men"

Focus (12/95) Vol.11, No.1, P. 3; Schochet, Rachel

In a review of two books that examine the issues uninfected gay

men face--"HIV-Negative: How the Uninfected are Affected by AIDS" and "In the Shadow of the Epidemic: Being HIV-Negative in the Age of AIDS"--reviewer Rachel Schochet says the books "break the silence on seronegatives," finally giving some attention to this "vulnerable population." "HIV-Negative: How Uninfected Men are Affected by AIDS" is written by William Johnston, former member and leader of the Boston HIV-Negative Support Group. He inter-weaves the stories of 45 men he interviewed, addressing their concerns about HIV and their reactions to being HIV-negative. "In the Shadow of the Epidemic: Being HIV-Negative in the Age of AIDS," by clinical psychologist Walt Odets, addresses the issues from a clinical perspective and examines the psychology of being HIV-negative. The book includes descriptions and interpretations of psychological symptoms in seronegative gay and bisexual men, including depression, mania, anxiety, hypochondriasis, and sexual dysfunction.

Mr. Levy;

Chuck Kramer at SSS. I am trying to resolve the issue of getting attachments

to you. The folks at the EOP Help Desk were trying to be very helpful, but we haven't gotten anywhere.

I wanted to try a few things on this end that may help (or may not). I have attached a Word Perfect 5.1 file called ATTACH.WP5.

Could you please REPLY and let me know how it comes in to you?

Thanks in advance.

-- Chuck Kramer

READ:24-JAN-1996 13:26:27.60

TEXT:

Linda--

Thanks for the meeting with you and Jeanette yesterday. It was very helpful.

It would be great to figure out just what the budget situation is for the Council for the rest of the fiscal year. What assumptions have you made about money available for the rest of the year?

As to what would be spent:

(1) Two more full meetings -- two days. April and perhaps July or August.

(2) Subcommittee conference calls: one a month for four committees -- a total of 20 hours of conference calls for the rest of the fiscal year.

It's important to know if there is a way to use government funds for a third meeting. If it is not -- we're going to have to look at other options.

Face-to-face subcommittee meetings are also desired. Those, I think, could be funded by a foundation -- assuming it is just a briefing.

What is your informal opinion of joint funding of a full council meeting -- i.e., a foundation paying for airfare and a day of briefings and the government picking up the rest of the meeting costs?

If I could have some preliminary reaction to this by Thursday night (i.e., any chance of paying for a third meeting with government funds) -- that would be helpful for a meeting we have with Scott Hitt on Friday morning.

Thanks again for all your help.

Jeff

PRINTER FONT 12_POINT_ROMAN

Weekly Report:

Patsy Fleming met on July 25th with approximately 50 representatives of Washington

-based organizations concerned about AIDS to discuss follow up to the White House Conference on AIDS, the continued fight to preserve Medicaid, and the impact of the budget battle on AIDS programs. (Due to the failure to pass a year

-long appropriation for Labor

-HHS and VA

-HUD, there is significant disruption of the two principal federal programs to provide services to people with AIDS: the Ryan White CARE Act and the Housing Opportunities for People with AIDS program.) Patsy Fleming's report to the President on the state of the epidemic among adolescents is now in final review within HHS; it should be released in February.

The AIDS Office has been working with DOD and interested groups regarding the provision originated by Rep. Dornan in the DOD reauthorization that requires the mandatory discharge of HIV positive military personnel. This is medically inappropriate and is counter to the wishes of the DOD. The office is working to mitigate the impact of this provision on the approximately 1100 military personnel now serving who have HIV -- so as to lessen the negative political impact the President's signing this measure will have.

Plans for the Vice President's meeting with the drug industry about AIDS research is under way. A preliminary meeting with relevant government officials will be held next week; the meeting with industry is planned for mid

-February.

Work has begun on the interdepartmental AIDS research plan and

budget requested by the President at the White House Conference on AIDS. A meeting of the principals involved with health and research in the various departments was held on January 25th. As follow

-up to the White House Conference on AIDS, the AIDS Office is organizing a series of town meetings/community forums around the country. Funders Concerned About AIDS and the National AIDS Fund, both non

-profits, have agreed to work with the AIDS Office in setting these up. The first meeting will be in February.

Date: Wednesday, December 20, 1995 4:56PM

Folks,

I'm not sure if this is so much an experiment in HIV transmission as it is an interesting example of social networks. Now, if we could only find out what the relationships were between all those people.....I'm sure there's a paper in here somewhere.

Please pass this on, with all the "forwards" intact.

Thanks,

David

Nicole,

I thought your friends at the Center for Disease Control might find this interesting . . . if they haven't already gotten a thousand copies. From now on I'm wearing rubber gloves when I turn on my computer.

Ted

"Some Donors Have a Cause in Mind"
New York Times (01/24/96) P. B2; Jay, Sarah
Many donors to the New York Times Neediest Cases Fund specify that their donation be used to help fight AIDS. Leslie Lane and Alan Vorchheimer said they wanted their \$250 to be used for AIDS patients because they have had friends who died of AIDS, and hope to see more done to fight the disease. The Klein family of Manhattan wanted their \$650 to go to homeless children and children with AIDS. The fund's total, currently \$3.7 million, goes to help New Yorkers in a variety of ways.

"Red Cross Takes Aim at Inquiry Lawyers"

Toronto Globe and Mail (01/23/96) P. A1; Picard, Andre

The Canadian Red Cross Society brought action last week against the judge and lawyers who led the public inquiry into the Canadian tainted blood tragedy. More than 1,200 hemophiliacs and transfusion recipients were infected with the AIDS virus as a result of the tainted blood. The group claimed in federal court that Justice Horace Krever did not have the authority to say that some individuals and groups could be singled out for blame. The Red Cross asserts that the notices of misconduct issued by the judge should be quashed, that the council that participated in the public hearings not be allowed to help Krever prepare his final report or make any findings of misconduct public. They also say the lawyers at the inquiry took a "prosecutorial and adversarial stance." If the judge is allowed to issue notices of misconduct, they say, they will "suffer injury and damage, including harm to their reputations." A lawyer for the group Canadian Hemophiliacs Infected with HIV-AIDS said the legal action was "appalling" and an attempt to "ensure that the public never knows the facts of this horrible scandal."

"Gilead Sciences Announces Completion of European..."
Healthwire (01/23/96)

Gilead Sciences, Inc. reported on Tuesday that their application for authorization to market Vistide for the treatment of cytomegalovirus (CMV) retinitis in AIDS patients has been accepted by the European Medicines Evaluation Agency. CMV retinitis is the most common viral opportunistic infection in AIDS patients, affecting about 95 percent of people with AIDS. The agency, which will coordinate review of the application, authorizes human therapeutic products for marketing in all member states of the European community. The application includes safety data from Phase I/II studies and an ongoing study of the drug in previously untreated patients with CMV retinitis that is being conducted by the Studies of the Ocular Complications of AIDS research group. These data were also used for a New Drug Application to the U.S. Food and Drug Administration for marketing of Vistide for CMV retinitis in the U.S. The drug is now available in the U.S. and Canada free of charge through a treatment IND expanded access program for patients with relapsing CMV retinitis.

"Bio Fluorescent Technologies Expands Peruvian Trials for its Rapid Assay Tests for the Detection of the HIV 1/2 Viruses"
Business Wire (01/23/96)

Bio Fluorescent Technologies Inc. announced on Tuesday that it is expanding the Peruvian trials of its seven-minute rapid assay test for HIV 1/2. The trials, originally set up to include the Peruvian navy department, will include the army and police departments. The current trials will fulfill the country's administrative requirements and qualify the product for purchase by the Armed Services of Peru. The company expects sales to double to 1.5 million units during 1996. These projections do not include over the counter sales or private sector sales.

"NeXstar Pharmaceuticals' AmBisome Receives First..."

Business Wire (01/23/96)

NeXstar Pharmaceuticals announced on Tuesday that AmBisome has been approved by the Australian Therapeutic Goods Administration as a primary therapy for systemic fungal infections with candida, aspergillus and cryptococcus, and for visceral leishmaniasis. This is the first time the drug has been approved as a primary therapy for treating life-threatening fungal infections. The company says it will seek similar approvals worldwide for the drug.

"Risk Factors for HIV-1 Seroconversion Among Young Men in Northern Thailand"

Journal of the American Medical Association (01/10/96) Vol.275, No.2, P. 122; Celentano, David D.; Nelson, Kenrad E.; Suprasert, Somboon; et. al.

Celentano et al. conducted a study to determine the incidence of HIV-1 infection in northern Thailand and to identify behavioral and sociodemographic risk factors for seroconversion among young men. A total of 2,413 men aged 19 to 23 from northern Thailand, inducted into the Royal Thai Army and Air Force, were followed for two years, and evaluated by interview and serology every six months. Of the 1,932 participants that were seronegative at enrollment, 85 men seroconverted to HIV-1 over the observation period. Factors associated with seroconversion were frequency of visits to female prostitutes, sex with men, and incident sexually transmitted diseases. Condom use provided some protection against HIV, although not in multivariate analysis. The authors concluded that, to decrease HIV-infection in Thailand, programs to increase condom use by prostitutes are necessary, as are efforts to extend condom use to other partners.

"Texas, Mexico Health Officials Join Forces to Fight TB"

Nation's Health (01/96) Vol.26, No.1, P. 8

Texas and Mexico health officials signed an agreement in November to join forces to fight tuberculosis on both sides of the border. The agreement recognizes the problems of cross-border travel and controlling disease. The pact provides for training for health care workers, improving data collection and analysis and sharing laboratory services. Those who are found to have tuberculosis will be treated and tracked to confirm that they completed the treatment.

"Indian Supreme Court Demands Cleaner Blood Supply"

Lancet (01/13/96) Vol.347, No.8994, P. 114; Kumar, Sanjay

In an attempt to ensure a safer blood supply in India, and lessen malpractice, malfunctioning and corruption in the nation's blood banking system, the Indian Supreme Court has told the government to create a National Council for Blood Transfusion. Justices advised the government to enact separate legislation for regulating the collection, processing, storage, distribution, and transportation of blood and the operation of blood banks. The order also called for all of India's blood banks to be licensed within a year. A quarter of them are currently unlicensed.

Other provisions include ending the professional sale of blood within 2 years, verifying that trained drug inspectors check the banks, and allowing 100 percent exemption on income tax to people donating money to the banks. The court's directive came in response to a petition filed by Common Cause, a non-governmental organization, against the government agencies that deal with blood safety. Their petition was based on a Health Ministry report that revealed the poor condition of the nation's blood bank system. Among other things, most blood banks were not testing for transmissible infections. About 15 percent of the people known to have HIV in India are either blood donors or blood-product recipients.

"Bob Gallo's New Weapon Against AIDS"

Business Week (01/15/96) No.3458, P. 87; Carey, John

Dr. Robert C. Gallo, who was being investigated for possible misconduct by the National Institutes of Health and the House Energy and Commerce Committee a few years ago, is now back on track--he will head a new Institute of Human Virology at the University of Maryland, and his lab has recently identified natural HIV-fighting chemicals. This discovery will "open up a whole new avenue for thinking about how to control HIV," he says. Gallo's encouraging discovery is one of many during the past year, adding new information about the virus and drugs to be used against it. Gallo feels so confident about the developments that he predicts, "AIDS will be a clinically curable disease in the next 10 years." Last year, scientists proved that HIV starts attacking the body immediately, wearing down the immune system gradually, instead of remaining dormant for years, as was previously thought. This discovery led some researchers to begin thinking that bolstering the immune system might be more effective than anti-HIV drugs, to which the virus becomes resistant. Gallo's identification of chemokines, natural chemicals that suppress the virus, is a major step toward strengthening immunity. Now the race is on to learn how the chemicals work and to develop drugs to recreate their anti-HIV action in the body.

"Book Review: Understanding HIV-Negative Gay Men"

Focus (12/95) Vol.11, No.1, P. 3; Schochet, Rachel

In a review of two books that examine the issues uninfected gay men face--"HIV-Negative: How the Uninfected are Affected by AIDS" and "In the Shadow of the Epidemic: Being HIV-Negative in the Age of AIDS"--reviewer Rachel Schochet says the books "break the silence on seronegatives," finally giving some attention to this "vulnerable population." "HIV-Negative: How Uninfected Men are Affected by AIDS" is written by William Johnston, former member and leader of the Boston HIV-Negative Support Group. He inter-weaves the stories of 45 men he interviewed, addressing their concerns about HIV and their reactions to being HIV-negative. "In the Shadow of the Epidemic: Being HIV-Negative in the Age of AIDS," by clinical psychologist Walt Odets, addresses the issues from a clinical perspective and examines the psychology of being HIV-negative. The book includes descriptions

and interpretations of psychological symptoms in seronegative gay and bisexual men, including depression, mania, anxiety, hypochondriasis, and sexual dysfunction.

TEXT:

Good news.

Carol and the Secretary caught up in the WW lobby for 10 minutes and covered all topics.

1) HC cannot imagine why agreement not signed. Will get on it immediately.

2) Very willing to provide administrative help. CHR said that when Patsy meets with him you will describe type of person you need.

3) Happy to do town meetings, but would prefer not Texas. Thinks he would be more useful in an industrial midwest city - Detroit, Chicago, Cleveland etc.

4) Happy to meet with Patsy - you should call to schedule ASAP.

Carol was very happy to have done this. I think it was the right way to go. Thanks.

TEXT:

Hello.

Thank you for the typed waves list with names and dobs. That's the easiest, quickest way to wave. Everyone for your 3p is cleared (confirmation #: U53141), including two new additions.

I am happy to help clear people into the oeob for your office, but please encourage your office (and your new interns) to please get names/dobs to me early, preferably the day before. This is the only way to avoid your folks being stranded outside.

I missed a waves requests from your office yesterday because I was out of my office an hr before your meeting. I realize it's unavoidable to prevent last-minute changes (the AIDS conference is a prime example), but I wanted to send a reminder for future meetings. There are no problems with today's 3 and 4p meetings...

This is HONESTLY just a reminder - not a complaint.

Thanks so much.

"Israel Dumps Blood From Ethiopians"

Washington Post (01/25/96) P. A1; Gellman, Barton

Israel's national blood bank system--which has been accepting donations from Ethiopian immigrants but automatically discarding the blood for fear of HIV contamination--has aroused intense controversy. Ethiopians are angered by the news, which was reported in the daily newspaper Maariv and was confirmed by government officials Wednesday. Adiso Masala, head of the Organization of Ethiopian Immigrants, called the action racist and said "We are blood brothers with the Israelis but our blood is thrown in the garbage because we are black." The head of the government's National AIDS Committee defended the policy, however, saying the rate of HIV in Ethiopians is 50 times higher than in the general population. Israeli health officials cited the American practice of refusing donated blood from Haitian

immigrants, which took place from 1983 to 1990. The practice was discontinued when health experts determined they could eliminate almost all infected blood donations by asking donors about their sex and drug-use habits.

"House Compromises on Defense; White House Still Sees Problems"
Washington Times (01/25/96) P. A4

The House passed a new version of the defense authorization bill Wednesday after removing some provisions opposed by the White House. The bill kept a measure that requires military personnel with HIV to be discharged, which Clinton objected to. The provision was offered by Rep. Robert Dorman (R-Calif.), a conservative presidential candidate who asserted that military readiness is harmed by the current policy that prevents HIV-positive service members from joining in overseas deployment. Rep. Gerry Studds (D-Mass.) said that to be fair all service members should be discharged if they have any sickness that would prevent them from being deployed. Rep. Barney Frank (D-Mass.) called the provision "gratuitous cruelty."

"Illinois Officials Want HIV List"

St. Louis Post-Dispatch (01/24/96) P. A1; McDermott, Kevin

Some Illinois health officials want to expand the state's confidential list of people who have AIDS to include those who test positive for HIV. Dr. John Lumpkin, director of the Department of Public Health, says the policy would make it easier to locate patients for counseling and treatment. Thirty other states, already keep such a list. AIDS activists say the policy would backfire, and prevent people from getting needed care because of fear of being stigmatized. State officials say they have succeeded in the past at keeping confidential records from the public. Under the proposal, hospitals, private clinics, and other non-state facilities would not be allowed to test anonymously, but state-run clinics would continue to do so, the reason being that the state would know that appropriate treatment services were being given to patients who test positive at state clinics.

"Mozambique Estimates Six Percent of Population Have HIV"
Reuters (01/24/96)

An estimated one million people, six percent of the population of Mozambique, have been infected with HIV, the Health Ministry reported Wednesday. Avertino Barreto, director of the ministry's anti-AIDS program, told the state news agency that 2,652 cases of AIDS were confirmed, and another 16,000 cases are suspected. The worst-hit areas were the central provinces of Manica and Tete. Mozambique's estimate is still relatively low for the region. Zimbabwe and Uganda have an estimated 10 percent infection rate.

"Taking a Big Risk for a Cure"

Time (01/15/96) Vol.147, No.3, P. 59; Gorman, Christine

Jeff Getty, once a self-described yuppie, learned he was HIV positive in 1985, and a few years later retired from his job as an administrative analyst at the University of California at

Berkeley, to become an AIDS activist. He took up immunology, retrieved experimental therapies from Mexico, and joined protests for the government to speed up approval of new AIDS drugs. Getty also recently became the first AIDS patient to receive a bone marrow transplant from a baboon, after spending more than a year fighting for approval of the procedure. The Food and Drug Administration approved the transplant--for Getty only--in August, but the experiment was postponed until December because Getty developed potentially fatal pneumocystis pneumonia. He left the hospital recently, but doctors will not know if Getty's immune system has accepted the foreign material for months. Most doctors say that Getty does not have a very good chance of success.

"CD8 Cells: Suppressive Factors Discovered"

AIDS Treatment News (01/05/96) No.238, P. 5; James, John S.

Scientists at the University of California San Francisco Medical Center reported 9 years ago that a substance produced by CD8 cells could inhibit HIV growth, even through a filter.

Researchers were not able to identify the substance, however.

Three such substances were identified in December 1995, by researchers at the U.S. National Cancer Institute Laboratory of Tumor Cell Biology, then led by Dr. Robert C. Gallo. In the same month, a fourth substance was identified in separate work in Germany. The substances found in the U.S. are proteins, called chemokines. In laboratory tests, antibodies to the proteins were shown to block all the suppressive activity in cultures from three of four patients. In the fourth, they blocked 80 percent of it. The researchers do not know yet if the proteins themselves would be effective for treating HIV, but their identification offers potential for new-drug development. These substances might also be used as a marker for AIDS progression, or of the therapeutic effects of drugs.

"Therapy for Cytomegalovirus Retinitis: Still No Silver Lining"

Journal of the American Medical Association (01/10/96) Vol.275, No.2, P. 149; Young, Lucy H.Y.

An editorial by Lucy H.Y. Young in the Journal of the American Medical Association examines treatment options for cytomegalovirus (CMV), the leading cause of visual loss in AIDS patients. Left untreated, the disease--which affects about one-third of all people with AIDS--causes complete destruction of the retina. According to Young, ganciclovir and foscarnet provide a way to manage the disorder, but cannot eliminate CMV from an infected retina. Reactivation develops in nearly all patients over time, and as the patient's immunity weakens, the disease becomes harder to control. Foscarnet and ganciclovir are similar in their efficacy in controlling CMV retinitis, but more people switch from foscarnet to ganciclovir as a result of foscarnet's side effects. The number of patients with reactivated CMV retinitis is increasing with an increase in survival of patients with AIDS and further damage to the eye occurs with each relapse. Young advocates effective protocols for managing recurrences, and for simplifying and enhancing

maintenance therapy. Young reports that some doctors switch drugs to treat a relapse, because viral strains have been found to develop a resistance to the drugs. She notes also that results of a recent study published in the January issue of the journal Archives of Ophthalmology suggest that a combination of foscarnet and ganciclovir is the most effective way to control the progression of the disease and that when the drugs are used alone their efficacy in controlling progression is about the same.

"Danes' AIDS Education Criticized"

Lancet (01/13/96) Vol.347, No.8994, P. 114; Skovmand, Kaare

Rigsrevisionen, the Danish group of civil servants that controls public spending by the central administration has found fault with the National Board of Health. Among other things, the group says that a 20 minute AIDS video for schoolchildren was too expensive. The agency is also blamed for not putting the mandatory contract out for tender in the EC for an AIDS campaign it launched in 1994.

"Ghanaian Research Center Tackles Tough Health, Environmental Problems"

Chemical & Engineering News (01/01/96) Vol.74, No.1, P. 27; Ember, Lois R.

The Noguchi Memorial Institute for Medical Research, outside Accra, Ghana, built by the Japanese government to honor Hideyo Noguchi in 1977, is hindered by a lack of equipment and supplies and inconstant electricity. The Japanese government funds research on schistosomiasis--a disease caused by parasites in contaminated water as well as diarrheal diseases and HIV. Research is also conducted on malaria, river blindness, and nutrition. Japanese scientists come to work at the center, and it sends scientists to Japan for technical training. The center also receives building and staff support from the Ghanaian government and research funds from outside countries. The U.S. Agency for International Development (AID) has given the center a research grant to study HIV. Francis A. Nkrumah, the institute's director, says it "is one of the major centers [in Africa] for the study of HIV."

TO: 'Levi, Jeff (ONAP, White House)' (LEVI_J@A1@CD) (WHO)

READ:26-JAN-1996 15:04:12.21

TEXT:

Dear Jeff,

Thanks for e-mailing me the announcement about the DoD bill with the discriminatory HIV provision the President is being pressured into signing.

Since there may be times it would be appropriate to share such messages about White House AIDS policy with others, I wonder if you would also add my fax number (404-639-8616) to the fax distribution list, so I get the message both ways?

The e-mail messages don't come in with a header (and probably your original layout, typeface, and format) suitable for faxing onward to interested parties who might benefit from seeing it.

Thanks,
Bruce

FYI, other PACHA member e-mail addresses that I am aware of are as follows, although some may not be as reliable as faxes:

"Cade, Jerry" <peacevisio@aol.com>
"Fogel, Robert" <BigBob411@aol.com>
"Greenberger, Phyllis c/o SAWHR" <sawhr@clark.net>
"Hitt, Scott" <scotthitt@aol.com>
"Miramontes, Helen"

TEXT:
PRINTER FONT 14_POINT_COURIER
TALKING POINTS
DISCHARGE OF HIV

-POSITIVE MILITARY PERSONNEL
PRINTER FONT 12_POINT_COURIER

Background

The President intends to sign the conference agreement on H.R.1530, the National Defense Authorization Act. The legislation includes important reforms in military acquisition rules, an increase in pay for military personnel, and other issues vital to the national interest. It also contains a provision, opposed by the President, requiring the retirement or discharge of personnel who are HIV

-positive.

Key Points

* The President and his Administration have vigorously opposed this provision. The President cited it as one of the reasons for his veto of the earlier version of this bill.

I find the provision to be deeply offensive. It flies in the face of medical advice and singles out one group of Americans for differential treatment and discrimination. These men and women are willing and able to continue serving their nation. This provision is an insult to their commitment.

* During the negotiations over the revised version of the legislation, the Administration aggressively sought to have this provision omitted from the final legislation. Sadly, these efforts were not successful.

* The overall legislation is vitally necessary for the national security of the U.S. I fully understand the need for the President to sign this legislation.

* The Administration intends to take the following steps to mitigate the effect of the legislation on the men and women of the Armed Forces who would be adversely affected by this legislation:

-- Patsy Fleming, Director of National AIDS Policy, is meeting today (1/26) with senior officials from the Department of Defense and the Department of Veterans' Affairs to discuss ways to protect the medical and other benefits of these men and women;
(The legislation restricts the availability of benefits to care in VA facilities and CHAMPUS coverage.)

-- The Administration will work closely with a bipartisan group of House and Senate members to pursue legislation to reverse this policy before it takes effect in six months.

TALKING POINTS DISCHARGE OF HIV-POSITIVE MILITARY PERSONNEL

Background

The President intends to sign the conference agreement on H.R.1530, the National Defense Authorization Act. The legislation includes important reforms in military acquisition rules, an increase in pay for military personnel, and other issues vital to the national interest. It also contains a provision, opposed by the President, requiring the retirement or discharge of personnel who are HIV-positive.

Key Points

*The President and his Administration have vigorously opposed this provision. The President cited it as one of the reasons for his veto of the earlier version of this bill.

I find the provision to be deeply offensive. It flies in the face of medical advice and singles out one group of Americans for differential treatment and discrimination.

These men and women are willing and able to continue serving their nation. This provision is an insult to their commitment.

*During the negotiations over the revised version of the legislation, the Administration aggressively sought to have this provision omitted from the final legislation. Sadly, these efforts were not successful.

*The overall legislation is vitaly necessary for the national security of the U.S. I fully understand the need for the President to sign this legislation.

*The Administration intends to take the following steps to mitigate the effect of the legislation on the men and women of the Armed Forces who would be adversely affected by this legislation:

- Patsy Fleming, Director of National AIDS Policy, met today (1/26) with senior officials from the Department of Defense and the Department of Veterans' Affairs to discuss ways to protect the medical and other benefits of these men and women;
- The Administration will work closely with a bipartisan group of House and Senate members to pursue legislation to reverse this policy before it takes effect in six months.

"President to Accept HIV Ban"

Washington Post (01/26/96) P. A1; Priest, Dana

President Clinton said he will sign a \$265 billion bill for the Department of Defense, even though it includes a provision that calls for all HIV-positive service members to be discharged. He vetoed a previous version of the bill because of the measure, one that the Defense Department also opposed. It would affect 1,049 male and female service members, who would have to be discharged within six months. Representative Robert Dornan (R-Calif.) sponsored the provision, which also bars those discharged from receiving the medical benefits available to others who are forced to leave military service for medical reasons. Related Stories: Washington Times (01/26/96) P. A4; Philadelphia Inquirer (01/26/96) P. A13

"Suspect in Hypodermic Jabbing Is Declared Unfit to Stand Trial"
New York Times (01/26/96) P. B7

Psychiatrists have determined that Angel Coro, the man charged with jabbing a 6-year-old girl with a hypodermic needle on a New York subway train, is unfit to stand trial. The girl's parents have asked a judge to have Coro tested for HIV, hepatitis and syphilis, although the tests are not permitted under the current law. Coro is to remain under psychiatric supervision until he is found competent or until he serves two-thirds of the maximum sentence for the charges of attempted assault and criminal possession of a weapon.

"A New Drive For an AIDS Vaccine"
Washington Post (01/26/96) P. E3; Mann, Judy

The Rockefeller Foundation is leading an effort to stimulate research and development of an AIDS vaccine, a project which has been getting less than 10 percent of the \$8.8 billion spent on AIDS worldwide. Seth Berkley, director of health sciences for the foundation, said he discovered in 1994 that drug companies had stopped research on a vaccine. The reasons, he said, were the high cost of the research, the liability problems associated with testing an HIV vaccine, the scientific risks of pursuing a vaccine that is not assured of success, and the uncertainty about its profitability. To deal with these problems, the foundation has organized three meetings of experts to put together a plan for an international effort to research a vaccine over seven years.

"Grieving Siblings Need to Share AIDS Loss"
Houston Chronicle (01/25/96) P. 5D; Herndon, Lucia

People who lose siblings to AIDS suffer--in addition to their grief--the added problems of dealing with the stigma attached to the disease. Many siblings try to keep the cause of death a secret for fear of the reactions of family and friends. Linda Robinson lost a brother to AIDS and said keeping the cause of death secret kept her from grieving. She is conducting research interviews with surviving siblings of people who died of AIDS in an effort to help people cope with the loss and the special problems it may create.

"Man Wins New Trial After Court Faults Judge's AIDS Precautions"
Boston Globe (01/25/96) P. 25; Vigue, Doreen Iudica

The Massachusetts Appeals Court ruled Wednesday that precautions taken by Berkshire Superior Court Judge Charles Alberti Jr. to keep a defendant from using his AIDS-infected blood to escape or to cause a mistrial were too extreme. Alberti had ordered that the defendant be held in leg irons during his trial and that he be separated from his lawyer by a table and a stack of books. The Appeals Court set aside the conviction and ordered a new trial. The defendant told the woman he allegedly raped that he had HIV, but it was never confirmed.

"Study Finds More Children 'Cured' of AIDS"
Reuters (01/25/96)

Results of a European study found that almost three percent of children born with HIV managed to purge the virus from their bodies, doctors reported on Friday. Researchers in four European cities noted that nine out of more than 200 children born with HIV did not have the virus when tested later. The nine children are now nearly nine years old and still healthy. The researchers say exploring how the children rid themselves of the virus could help in vaccine development.

"Study Queries Claims that HIV Does Not Cause AIDS" Reuters (01/25/96)

A group of doctors said Friday that their studies of the links between hemophilia and AIDS have cast further doubt on assertions that HIV does not cause AIDS. The argument against the connection, put forth by a few doctors, has never been accepted by the medical community. Dr. Caroline Sabin and colleagues at the Royal Free Hospital School of Medicine in London say results of their study indicate the theory that HIV could simply be a "passenger" virus is insupportable. They compared 17 hemophiliacs with HIV to 17 hemophiliacs without the virus and found that only those with HIV developed AIDS.

"Protease Inhibitors Studies Probe HIV Resistance to Drugs" Chemical & Engineering News (01/96) Vol.74, No.1, P. 6; Zurer, Pamela

Indinavir--the new AIDS drug from Merck that works by inhibiting the protease enzyme of HIV--must be given in doses high enough to completely suppress viral replication, like other protease inhibitors. If the dose is not high enough, HIV mutates into drug-resistant forms. Merck scientists presented these findings in December at the 1995 International Chemical Congress of Pacific Basin Societies in Honolulu. Very ill AIDS patients treated with 2.4 grams of indinavir a day showed a dramatic decrease in the amount of virus in their bodies, while patients given a lower dosage of protease inhibitors developed resistance to the drugs. Giving a person a dose that is too low could make them resistant to any protease inhibitor. Paul Reider, a vice president at Merck, observed that efficiently synthesizing up to one million kg of indinavir a year would be an "incredible scientific challenge." A factory is currently under construction for the manufacture of the drug. The company will apply for FDA approval of indinavir by early spring, Reider said.

"English HIV and AIDS Projections Made"

Lancet (01/13/96) Vol.347, No.8994, P. 109; Ramsay, Sarah

HIV transmission by exposure among homosexual males is occurring at "substantial levels" in Wales and England, possibly up to 1,000 new infections annually, a new report from the Public Health Laboratory Service says. The expert group that issued the report used data up to the end of 1994 to make projections for 1995 to 1999. The report says that since the late 1980s, there has been a reversal in trends in markers of unprotected sexual intercourse, like acute hepatitis B infection and rectal gonorrhoea, among homosexual and bisexual men. The group

suggests that health agencies survey male homosexual behavior regularly and monitor changes in high-risk behavior patterns.

"AIDS and Suicide"

Journal of the American Medical Association (01/17/96) Vol.275, No.3, P. 172d; Kirchner, Jeffrey T.

Various medical, neurologic, and psychiatric factors may contribute to the death of an HIV-infected patient. In this study, Kirchner presents the case of a 27-year-old man who committed suicide about 2 years after being diagnosed with AIDS, although he had no prior psychiatric history. The author emphasizes the importance for physicians to be aware of the mental health concerns related to AIDS. He suggests that a patient's suicide risk be evaluated during the regular office visit, when appropriate.

Related Stories: Washington Times (01/26/96) P. A4; Philadelphia Inquirer (01/26/96) P. A13

"Suspect in Hypodermic Jabbing Is Declared Unfit to Stand Trial"
New York Times (01/26/96) P. B7

Psychiatrists have determined that Angel Coro, the man charged with jabbing a 6-year-old girl with a hypodermic needle on a New York subway train, is unfit to stand trial. The girl's parents have asked a judge to have Coro tested for HIV, hepatitis and syphilis, although the tests are not permitted under the current law. Coro is to remain under psychiatric supervision until he is found competent or until he serves two-thirds of the maximum sentence for the charges of attempted assault and criminal possession of a weapon.

"A New Drive For an AIDS Vaccine"
Washington Post (01/26/96) P. E3; Mann, Judy

The Rockefeller Foundation is leading an effort to stimulate research and development of an AIDS vaccine, a project which has been getting less than 10 percent of the \$8.8 billion spent on AIDS worldwide. Seth Berkley, director of health sciences for the foundation, said he discovered in 1994 that drug companies had stopped research on a vaccine. The reasons, he said, were the high cost of the research, the liability problems associated with testing an HIV vaccine, the scientific risks of pursuing a vaccine that is not assured of success, and the uncertainty about its profitability. To deal with these problems, the foundation has organized three meetings of experts to put together a plan for an international effort to research a vaccine over seven years.

"Grieving Siblings Need to Share AIDS Loss"
Houston Chronicle (01/25/96) P. 5D; Herndon, Lucia

People who lose siblings to AIDS suffer--in addition to their grief--the added problems of dealing with the stigma attached to the disease. Many siblings try to keep the cause of death a secret for fear of the reactions of family and friends. Linda Robinson lost a brother to AIDS and said keeping the cause of death secret kept her from grieving. She is conducting research interviews with surviving siblings of people who died of AIDS in an effort to help people cope with the loss and the special problems it may create.

"Man Wins New Trial After Court Faults Judge's AIDS Precautions"

Boston Globe (01/25/96) P. 25; Vigue, Doreen Iudica

The Massachusetts Appeals Court ruled Wednesday that precautions taken by Berkshire Superior Court Judge Charles Alberti Jr. to keep a defendant from using his AIDS-infected blood to escape or to cause a mistrial were too extreme. Alberti had ordered that the defendant be held in leg irons during his trial and that he be separated from his lawyer by a table and a stack of books. The Appeals Court set aside the conviction and ordered a new trial. The defendant told the woman he allegedly raped that he had HIV, but it was never confirmed.

"Study Finds More Children 'Cured' of AIDS"

Reuters (01/25/96)

Results of a European study found that almost three percent of children born with HIV managed to purge the virus from their bodies, doctors reported on Friday. Researchers in four European cities noted that nine out of more than 200 children born with HIV did not have the virus when tested later. The nine children are now nearly nine years old and still healthy. The researchers say exploring how the children rid themselves of the virus could help in vaccine development.

"Study Queries Claims that HIV Does Not Cause AIDS"

Reuters (01/25/96)

A group of doctors said Friday that their studies of the links between hemophilia and AIDS have cast further doubt on assertions that HIV does not cause AIDS. The argument against the connection, put forth by a few doctors, has never been accepted by the medical community. Dr. Caroline Sabin and colleagues at the Royal Free Hospital School of Medicine in London say results of their study indicate the theory that HIV could simply be a "passenger" virus is insupportable. They compared 17 hemophiliacs with HIV to 17 hemophiliacs without the virus and found that only those with HIV developed AIDS.

"Protease Inhibitors Studies Probe HIV Resistance to Drugs"

Chemical & Engineering News (01/96) Vol.74, No.1, P. 6; Zurer, Pamela

Indinavir--the new AIDS drug from Merck that works by inhibiting the protease enzyme of HIV--must be given in doses high enough to completely suppress viral replication, like other protease inhibitors. If the dose is not high enough, HIV mutates into drug-resistant forms. Merck scientists presented these findings in December at the 1995 International Chemical Congress of Pacific Basin Societies in Honolulu. Very ill AIDS patients treated with 2.4 grams of indinavir a day showed a dramatic decrease in the amount of virus in their bodies, while patients given a lower dosage of protease inhibitors developed resistance to the drugs. Giving a person a dose that is too low could make them resistant to any protease inhibitor. Paul Reider, a vice president at Merck, observed that efficiently synthesizing up to one million kg of indinavir a year would be an "incredible scientific challenge." A factory is currently under construction for the manufacture of the drug. The company will apply for FDA

approval of indinavir by early spring, Reider said.

"English HIV and AIDS Projections Made"

Lancet (01/13/96) Vol.347, No.8994, P. 109; Ramsay, Sarah

HIV transmission by exposure among homosexual males is occurring at "substantial levels" in Wales and England, possibly up to 1,000 new infections annually, a new report from the Public Health Laboratory Service says. The expert group that issued the report used data up to the end of 1994 to make projections for 1995 to 1999. PRINTER FONT 14_POINT_COURIER

TALKING POINTS

DISCHARGE OF HIV

-POSITIVE MILITARY PERSONNEL

PRINTER FONT 12_POINT_COURIER

Background

The President intends to sign the conference agreement on H.R.1530, the National Defense Authorization Act. The legislation includes important reforms in military acquisition rules, an increase in pay for military personnel, and other issues vital to the national interest. It also contains a provision, opposed by the President, requiring the retirement or discharge of personnel who are HIV

-positive.

Key Points

* The President and his Administration have vigorously opposed this provision. The President cited it as one of the reasons for his veto of the earlier version of this bill. I find the provision to be deeply offensive. It flies in the face of medical advice and singles out one group of Americans for differential treatment and discrimination. These men and women are willing and able to continue serving their nation. This provision is an insult to their commitment.

* During the negotiations over the revised version of the legislation, the Administration aggressively sought to have this provision omitted from the final legislation. Sadly, these efforts were not successful.

* The overall legislation is vitally necessary for the national security of the U.S. I fully understand the need for the President to sign this legislation.

* The Administration intends to take the following steps to mitigate the effect of the legislation on the men and women of the Armed Forces who would be adversely affected by this legislation:

-- Patsy Fleming, Director of National AIDS Policy, met today (1/26) with senior officials from the Department of Defense and the Department of Veterans' Affairs to discuss ways to protect the medical and other benefits of these men and women;

-- The Administration will work closely with a bipartisan group of House and Senate members to pursue legislation to reverse this policy before it takes effect in six months.

TEXT:

Due to several DPC staff members working on a morning event for the President, we will NOT meet at 9:30 a.m. I am by way of this email asking Paul to conduct the morning call; Julie, Pat and I will not be able to join the call. Please go through the morning meeting notes Paul, and then the rest of the staff coordinate on anything needed. I regret I have to cancel this staff meeting as I will also miss the following Monday's meeting due to the Governors' Association's meeting with the President that morning; I will also be out of town on Feb. 12 and then the office is officially closed on the 19th. I will work to reschedule a staff meeting for next week on the 6th or the 8th at which time we will have the Comprehensive Services presentation and discussion I had asked to have this Monday the 29th.

My own schedule has changed and I will now go to California from New York on Wednesday evening. I hope to be back in the office on Friday morning if flight schedules permit.

I will have the computer with me, and Pat will distribute a revised travel schedule on Tuesday or Wednesday for the California portion of the trip.

In addition to this week's travel I will be going to Nashville, Tennessee for the EC Conference on the evening of Feb. 6 to return late on the 7th.

Thank you for everything you are each doing....let's keep in touch by email if not in person!

Mike --

I am sorry we weren't clear -- and sorry I took so long to get back to you. I know this has been a difficult issue for people to explain.

They ARE eligible for VA and CHAMPUS benefits (also for care -- on an availability basis -- at MTFs). The problem is that their dependents lose these benefits, which they would retain if they were on medical disability. And they will also not have a source of income without a disability determination.

We met on Friday with DOD and VA; there have also been conversations with Justice re the constitutionality of this. Rest assured we are exploring every possible option either to prevent this from happening (through repeal or other means) or to mitigate its effects.

Call if you have any other questions. Thanks for your help.

Jeff

ATT SUBJECT: response to questions about HIV reporting

ATT TO: Levi, Jeff (levi_j@A1@CD)

ATT CC: Conrad, Gary L. (glc3@cpsod1.em.cdc.gov@INET@EOPMRX)

TEXT:

Jeff,

Below is the response to your request for information on HIV reporting:

1. CDC does not have a formal policy regarding state adoption of name-based HIV infection but does believe, if properly implemented and protected under state confidentiality laws, that HIV name reporting serves several useful public health functions. HIV reporting among adults and adolescents provides surveillance information not available through other monitoring systems and serves as a basis for epidemiological investigation of persons with evidence of recent HIV infection. More states have adopted reporting for children than for adolescents and adults because of its usefulness to evaluate perinatal prevention efforts and determine why these infections continue to occur. CDC encourages states to expand pediatric HIV reporting. Ultimately, the adoption of HIV name reporting is a state decision. CDC provides technical assistance to states that adopt such reporting.

CDC only funds name-based reporting systems for HIV (29 states) or AIDS surveillance (all states have name reporting for AIDS). Reporting by name provides the most direct means to eliminate duplicate reports, allow for prompt follow-up on cases of epidemiologic importance, and allows for cross-matching with other public health records such as death certificates.

At the present time, name-based reporting systems are the best use of public health surveillance resources. Other systems that are based on

other unique identifiers like a numerical code have not been fully evaluated and shown to be as reliable as a name in meeting the above objectives.

However, CDC is not against the use of other unique identifiers when they are shown to be effective.

CDC is sponsoring a trial of unique identifiers in two states (Maryland and Texas). However, these states have had a difficult time of establishing these systems because medical records are name based and converting that information to a numerical unique identifier complicates reporting. CDC is also sponsoring a multi-state study of whether name-based HIV infection reporting deters persons from seeking HIV counseling and testing.

2. In FY 1995, CDC awarded \$3,571,200 to health departments for Adult and Pediatric HIV Reporting. These funds were included in the larger Surveillance/Sero cooperative agreement.

3. Since HIV is no longer part of the PPG proposal, this question is no longer relevant. However, under the former proposed PPG, surveillance funds were to be set-aside so that states could continue to conduct program surveillance activities without a disruption in funding levels.

I hope this answers your questions. Please give me a call if you need to discuss this.

Eva

TEXT:

Mike,

Thanks for your fax. We are caught in a technological Catch-22.

You can't do underscores and I can't initiate internet yet.

I appreciated your comments -- especially your comparison to the SS St. Louis. I also agree that this is going to be difficult to overcome. We are working on a number of fronts -- to position the President vocally as opposed to this provision and doing all he can to repeal it and mitigate it. But the community is appropriately upset about the various messages the signing will send.

Your suggestion of a conference call with the Council is a good one. I think we will try to do it mid-week -- when we have some more substantial responses to put on the table.

Thanks for your help.

Jeff
