TEXT:

THE WHITE HOUSE
Office of the Press Secretary

For Immediate Release

May 2, 1996

STATEMENT BY THE PRESIDENT

I applaud the members of Congress for this overwhelming statement of support for the Ryan White Comprehensive AIDS Resources Emergency Act. By extending this vital program for five additional years, lawmakers of both parties are sending a message

of support to thousands of Americans who are living with HIV or AIDS and to their families and friends who offer them love and support each and every day. In its first five years of existence, the Ryan White CARE Act has provided high-quality medical care and support services that help to extend the length and improve the quality of life for people living with HIV/AIDS. I have been proud of our recent success in increasing funding for this program by more than 110 percent in the last three years, including a \$105 million increase in the recently enacted budget agreement for fiscal year 1996. I look forward to signing this bill and continuing this record of bipartisan support.

HClinton Ready to Sign AIDS Assistance Bill

WASHINGTON (AP) President Clinton says he's anxious to sign compromise legislation that would extend federal AIDS assistance for five more years.

The Senate approved the Ryan White CARE Act by voice vote Thursday, the final congressional action on legislation that was stalled for nine months over the issue of mandatory HIV testing. The House passed the bill Wednesday, 402-4.

The compromise would provide for voluntary testing of pregnant women and delay any mandatory testing of newborns.

Clinton said after passage that the bill sends "a message of support to thousands of Americans who are living with HIV or AIDS and to their families and friends who offer them love and support each and every day."

Clinton said that the first five years of the AIDS assistance program provided high-quality medical care and support services that extended life and improved the quality of life for AIDS victims.

The bill would promote programs encouraging pregnant women to voluntarily seek counseling and testing for HIV, the virus that causes AIDS. States would be required to test newborns only if volunteer rates are too low.

The legislation was named for a hemophiliac teen-ager who died of AIDS contracted through a blood transfusion.

It would ensure that rural areas get a greater share of the \$738 million for treatment and support services than they got in the past. Funding last year was \$632 million.

The issue of mandatory testing of newborns for HIV had kept the bill locked in conference since July. House Republicans were adamantly in favor, but senators, backed by the American Medical Association and National Governors' Association, were opposed.

Although 2,000 babies are born with HIV antibodies every year, 80 percent of babies born to HIV-infected mothers never develop AIDS. They test positive simply because they carry their mother's

immune cells.

The legislation provides \$10 million to help states implement existing government guidelines for voluntary HIV counseling, testing and treatment of pregnant women.

It requires the secretary of health and human services to determine in 1998 whether testing of newborns has become a standard practice in the United States. If the answer is yes, then states would have to meet certain goals to continue receiving money.

By 2000, a state would have to demonstrate a 50 percent reduction in newborns who test positive or show that 95 percent of pregnant women get tested. If a state failed to meet either of those requirements, it would have to require testing of infants born to mothers whose HIV status is unknown.

CDC National AIDS Clearinghouse (05/02/96)

The CDC National AIDS Clearinghouse announces the opening of its Community Outreach and Training Center (COTC) in Washington, DC. The COTC provides a setting for people and organizations working in prevention, health care, research and support to access a variety of HIV/AIDS information resources and receive training in accessing information. An open house is being held today at the COTC from 3:00 until 6:00 p.m. The COTC is located at 1931 13th St. NW in Washington, DC, in the National Minority AIDS Council building. The phone number is (202) 884-0164.

"AIDS Testing Compromise Is Reached"

Washington Post (05/02/96) P. A9; Dewar, Helen

House and Senate leaders agreed Wednesday to a plan to encourage pregnant women to be tested for HIV and to require testing of newborns if the voluntary effort fails. Tests of newborns would be required by 2000 for states that have not successfully implemented testing of pregnant women or succeeded in cutting down the number of children born with HIV. The agreement broke a stalemate over a House-approved plan to require testing of newborns that delayed the five-year reauthorization of the Ryan White CARE program, which provides AIDS treatment and support funding. Senators supported voluntary testing of mothers, which can prevent transmission of HIV to the children, rather than mandatory testing of infants. Under the new agreement, which still must be approved by both houses, \$10 million will be provided annually to help states implement Centers for Disease Control and Prevention guidelines related to voluntary HIV testing, counseling, and treatment of pregnant women. The House overwhelmingly approved the compromise measure late on Wednesday, and the Senate is expected to act on it soon. Related Stories: New York Times (05/02) P. B9; Washington Times (05/02) P. A10

"HHS to Assume D.C. Purse Strings"

Washington Times (05/02/96) P. C3; Nevans, Lisa

The federal government will take over paying providers of AIDS care in Washington, D.C., rather than giving the money to the city for the services. Although Mayor Marion Barry opposes the plan, it is supported by the city's independent Chief Financial Officer Anthony Williams, who said the plan will allow the providers to be paid more quickly, thereby facilitating urgent care. Williams added that the plan is not a threat to the city's independence.

"Pioneering AIDS Agency Making Comeback"

Philadelphia Inquirer (05/02/96) P. B2; Collins, Huntly

The first AIDS agency in the nation to work in the African

American community, known as BEBASHI, for Blacks Educating Blacks About Sexual Health Issues, is paying off its debts and has hired a new executive director, three years after going bankrupt. The Philadelphia Health Department showed its confidence in the agency by contributing \$710,969 for the fiscal year. BEBASHI's goal of preventing the spread of AIDS in the African American population is seen as especially important in Philadelphia, where the majority of AIDS cases are among blacks.

"Moving Forward, With Hope"

New York Times (05/02/96) P. C1; Weinraub, Bernard

Cookie Johnson had just found out she was pregnant when her husband, Earvin "Magic" Johnson, told her he was infected with HIV. Both she and the baby, now three-year-old Earvin III, are HIV-negative, and the couple has adopted a one-year-old daughter, Elisa. Cookie now works on AIDS education out of her husband's Beverly Hills business office, speaking to elementary and high school students and making a video to educate black women about AIDS. Since finding out that Magic was HIV-positive, Cookie says she has become more religious and that she has learned to appreciate every moment. She and her husband learned everything they could about HIV and how to sustain the immune system through exercise and a proper diet. She notes that before returning to the NBA, Magic was very focused on building up his body, sometimes doing 700 situps a day.

"Bill Requiring HIV Test for Boxers Clears House"

Philadelphia Inquirer (05/01/96) P. B2; Eshleman, Russell E.

The Pennsylvania House passed a bill Tuesday to make HIV testing mandatory for anyone who boxes professionally in the state. The bill, a response to heavyweight fighter Tommy Morrison's disclosure that he has HIV, would also ban anyone found to have HIV from boxing in Pennsylvania. The bill's sponsor, Republican Rep. John A. Lawless, said it would not only curb the possibility of HIV transmission in the ring, but would also cut down on fight promoters recruiting boxers at the last minute because the provision calls for a test at least 30 days before a fight. The Pennsylvania State Athletic Commission has proposed that boxers be tested annually at least 60 days before applying for a boxing license. The law being considered would take precedence over the commission regulation.

"Bill Could OK Court-Ordered Testing"

St. Louis Post-Dispatch (05/01/96) P.

2B

The St. Louis House of Delegates passed a bill to allow anyone to ask for court-ordered HIV testing of a person they have had contact with--if medical experts say the contact can transmit the virus. Missouri state law currently calls for testing if the defendant in a sex crime case is convicted. Opponents of the measure said the law could be improperly used out of vengeance, and lack of confidentiality is an issue.

"PCR Analysis of Limited Value for Diagnosis of HIV Infection"

Reuters (05/01/96)

Polymerase chain reaction (PCR) assay has been shown by meta-analysis to be of limited usefulness for diagnosing HIV infection. One analysis, published in the May 1 issue of the *Annals of Internal Medicine*, found that PCR assay for HIV diagnosis in adults should only be used when HIV antibody tests are insufficient. The second analysis, published in the May 1 *Journal of the American Medical Association*, found that while PCR is among the best tests for HIV diagnosis in neonates, it is not definite. Test errors can be reduced by either delaying testing until after the neonatal period or by repeating testing at 30 and 60 days of age.

"AIDS Advisers Disagree Over Events in HIV Blood Scandal"
Nature (04/25/96) Vol. 380, No. 6575, P. 660; Swinbanks, David

Three scientists involved in the Japanese government's study group on AIDS provided additional information about the group's role in the tainted-blood scandal when they testified recently before the Japanese Diet. The group recommended in 1983 that hemophiliacs continue to use blood products that had not been heat-treated and reportedly rejected a proposal to have heat-treated products imported. Takeshi Abe, who headed the group, testified that its purpose was to determine if anyone in Japan had AIDS, not to influence policy. Atsuaki Gunji, who headed the government's biologics and antibiotics division and set up the group, argued that the purpose was to evaluate how hemophiliacs were being treated and to decide if changes were merited because of AIDS. He noted that the group became an important decision-making body, even though it was not intended to be. Meanwhile, Juzo Matsuda, the third member of the study group, apologized for the group's actions, admitting that its decisions resulted in the wider spread of HIV. Abe refused to take any responsibility and dismissed suggestions that he delayed clinical trials of heat-treated blood products in exchange for donations from Japanese drug companies.

"Protease Inhibitors: Ritonavir and Saquinavir Combination Trial Recruiting--Seven U.S., Canada Sites Including San Francisco"
AIDS Treatment News (04/19/96) No. 245, P. 1

For the first time, two protease inhibitors will be combined in a study, to be conducted by Abbott Laboratories in the United States and Canada. Volunteers are now being recruited for the seven-city trial of ritonavir and saquinavir. The combination of the two drugs poses potential benefits along with serious safety concerns. Saquinavir is not well absorbed by the body, but when ritonavir is added, it can produce increased and sustained levels of saquinavir. The drugs also have different patterns of resistance, which may work together well to slow the development of resistance to the combination. The combination must be tested very carefully, however, with special consideration given to dosing.

6 US Cities' Drinking Water Dangerous to Aids People

WASHINGTON (May 2) XINHUA - The drinking water of six major U.S. cities is dangerous to people with AIDS and weakened immune systems, United Press International quoted a report from an AIDS patient advocacy group as saying today.

In its report "What's on Tap: Cryptosporidium in U.S. Public Drinking Water," the National Association for People with AIDS said it found tap water poses an extremely high risk of transmitting the hazardous parasite in six cities -- Atlanta, Minneapolis, St. Petersburg, Dallas, Newark, and Washington, which never test or don't have a means to alert the public if they do find the parasite in drinking water.

The organization also identified other 22 big cities, including Boston, Chicago, New York and Los Angeles, at high risk for outbreaks of the disease. Also today, the U.S. Environmental Protection Agency announced it will require monitoring for the parasite in large drinking water systems early next year. It will require monitoring of public drinking water systems serving populations greater than 100,000 and that use surface waters as a source of drinking water. Enditem

Today, HHS issued congressional notifications on Ryan White Care Act grants to 7 winners, totaling \$5 million.

Unfortunately, the notifications were done before the chief of staff found out about them. They will work on a press release for Monday.

The winners were in the following cities:

Hartford, CT

Cleveland, OH

San Jose, CA

Fort Worth, TX

Sacramento, CA

Edison, NJ

Minneapolis, MN

I'm waiting for more information from HHS.

Jeff - thanks for your draft letter. I changed the second paragraph and the signature.

Dear ---

On behalf of the Services Subcommittee etc.

All the members learned a great deal. The discussion helped advance our understanding of the complexities of addressing the service and care needs of people living with HIV and AIDS.
I hope

Thanks ...

Sincerely,

Edward S. Gould
Chair
Services Subcommittee

Your help with this is sincerely appreciated.

AIDS Action believes that we should not pursue the 30%....they would rather address the fact that our policies prevent worldwide deployability. Adding the 30% would run counter to our position that these folks are not really disabled. The feeling seems to be that when those who are positive ARE ready to leave the service, they are already at least 30% disabled under current criteria. Before completely dropping this, I would want to know Michele Benecke's views...she is out of town until Monday.

In FY 1995 Florida institutions received \$25.5 million in NIH AIDS research funds. There were 80 awards.

There are currently over 20 AIDS-related clinical trials open for enrollment at the following sites:

1. University of Miami - Adult ACTU
2. University of Miami - Pediatric ACTU
3. University of Miami - DATRI site
4. Broward General Medical Center, Ft. Lauderdale - DATRI site

The University of Miami also has grants from the National Cancer Institute to perform AIDS malignancy trials. In addition, they perform AIDS-related clinical trials, such as the Cytomegalovirus Retinitis Retreatment Trial, through their General Clinical Research Center (funded by NCRR).

TEXT:

I have spoken to most of you (and Todd has spoken to George) regarding whether VA should still amend its regs to rate HIV positive vets at 30 percent disability.

The general consensus of WH staff and of selected advocacy organizations consulted is that we should not change the VA disability schedule at this time.

These opinions were given understanding that it will be much more difficult to make this change in the future should the Dornan provision somehow again become law.

Nancy Ann/Toni: We should, therefore, allow VA to move ahead with the rest of its reg change at this time.

Thanks.

MEMORANDUM TO PAT LEWIS, MEDIA AFFAIRS

FROM: Patricia S. Fleming, National AIDS Policy Director

SUBJECT: Draft Answers for Advocate questions.

Following are the suggested answers for the AIDS

-related

questions submitted to the President by The Advocate. If we can be of further assistance in this matter please don't hesitate to contact Richard Sorian of my staff.

Thank you.

PRINTER FONT 12_POINT_ROMAN_ITALIC

Advocate Questions

PRINTER FONT 12_POINT_ROMAN

Question 18

AIDS continues to be a crisis in America. How has AIDS affected you personally?

Answer

AIDS is, indeed, a national crisis that affects all Americans and that is why my Administration has worked so hard to respond aggressively to the many demands that this epidemic creates. I'm proud of the fact that despite the enormous pressures of a zero

-growth budget we have increased spending for AIDS research,

prevention, and care by more than 40 percent. We have approved a whole new class of AIDS drugs in record time and made sure that people living with HIV would have the means to pay for them. We have empowered local communities to design their own AIDS prevention programs and backed them up with frank and honest national campaigns that tell people what they need to know to protect themselves. We have more than doubled the funding for the Ryan White CARE Act, which brings high

-quality medical care

to hundreds of thousands of people every year. And we have preserved the Medicaid program, which provides health coverage for nearly half of Americans living with AIDS.

I also have been proud of our work to confront AIDS

-related

discrimination wherever it appears. Every person with AIDS is someone's son or daughter, someone's brother or sister, someone's mother or father, someone's grandparent. Every case of AIDS affects each of us and they affect the future of our country. We are losing part of the next generation of leaders for our nation. In my own life, I have lost far too many close friends and colleagues -- men and women who have made a special contribution to our country and who have touched Hillary and Chelsea and me in a personal way. On my desk in the Oval Office, I keep several pictures to remind me of the task that we all face. Elizabeth Glaser, the courageous and forceful advocate for children with AIDS who turned the death of her daughter into a crusade for a national response before her own death from AIDS. And Ricky Ray, the little boy from Florida whose family was shunned by their community but rose above the hatred and the fear to educate a nation. And, finally, Ryan White, a teenager who taught us all to seek our better side and embrace people with AIDS.

Question 19

Some AIDS activists say in one breath that you've done more than either of the two most recent Presidents to fight the disease and then in the next breath they criticize you for not doing enough

or speaking out enough. Are both critiques accurate?

Answer

Yes. If my only goal was to do more than my predecessors then I would not be meeting the challenge of this epidemic. We have done considerably more but it is fair to ask have we done everything that we can. The answer is, "no." We can and we will do more. But we will never have done enough until there are no more infections, there are no new cases, and there are no more deaths. Our first priority must be to find a cure for all those who are living with HIV and a vaccine for everyone else. We must continue to invest in research so that we can unlock the mysteries of the virus and find the answers we need to protect the people of this planet. At the same time we have to keep our commitment to those who are living with HIV and AIDS to provide access to state

-of

-the

-art medical care. That means reforming our insurance system to protect those who have coverage; preserving Medicare and Medicaid; and continuing our investment in the Ryan White CARE Act. Finally, we must do more about prevention. I have been frustrated by Congress' inability to approve the funds I have requested for the Centers for Disease Control and Prevention. An investment in prevention saves us billions and billions of dollars in medical care down the road.

Question 20

During the White House Conference on AIDS, speaker after speaker called for explicit AIDS education program in the nation's schools that were honest about transmission and education. How explicit should the public schools be?

Answer

Our nation has come a long way in its education process on HIV and AIDS. It is clear that the more we, as individuals, know about this disease the more we can do to protect ourselves and our loved ones. A higher level of education also reduces the amount of fear and discrimination in our society. Many of our schools have been at the forefront of this effort and they deserve a great deal of credit. But decisions about what is said and what is taught must be left to local school districts, parents, and students.

At the national level, we have done a great deal to increase the amount of AIDS education. We have increased AIDS prevention funding by more than 20 percent and would have an even larger increase if Congress would approve my requests. And we have given power to communities by creating a community planning process that puts the decisions in the hands of local leaders.

Instead of dictating from Washington what is needed in each community, we listen to the leaders of those areas. This has led to a lot more creativity. We have also been more direct with our own education campaigns. In 1994, we developed the first public service announcements funded by the federal government to talk directly about the need to use condoms. It's hard to remember, today, what a big step that was. And this past year we released a second set of PSAs that feature young people talking about their lives and their experiences. There are strong indications that when young people hear from their peers they take the advice to heart and they change their behavior.

Question 21

Congress has stalled for many months on reauthorizing the Ryan White CARE Act. One reason was the debate over a proposal to test newborns for HIV. Is this a provision you could live with? What are your thoughts on mandatory HIV testing?

Answer

Despite the sharp divisions in the Congress, we were able to get

a five

-year reauthorization of the Ryan White CARE Act through the Congress. Throughout the year, I reminded the Speaker of the House and the Majority Leader of the Senate of the importance of this program to people living with HIV and AIDS and their families. I was pleased to see both houses reject the kind of divisive rhetoric adopted by Senator Helms. It is incumbent on all of us to do everything we can to reduce the number of infants born with HIV. Our scientific research has given us the capacity to do that. The Public Health Service guidelines recommend that every pregnant woman be counseled by her doctor on the benefits of testing and, if she is HIV

-positive, treatment with AZT.

Those guidelines are supported by all of the national medical and public health organizations. We should follow the advice of the experts. The final legislation supported that approach and we all must work to make sure that it is carried out.

Question 22

What will a second Clinton term do to fight the war on AIDS?

Answer

First and foremost, we must continue to search for a cure and a vaccine until we find them. At the same time, we must continue to search for better treatments so that we can extend not only the length of life but the quality of life. No President can guarantee success in science but we must marshal all of our

resources -- public and private -- for this effort. We have to keep pushing the envelope on prevention, including the development of a microbicide. We have to continue our work to guarantee access to state

-of

-the

-art care for people living with

HIV or AIDS. And we must -- we must -- preserve the Medicaid program. One of the saddest elements of the Republican attack on everything the government does has been the attempt to dismantle Medicaid. This is a program that is a lifeline of support for millions of Americans who often have nowhere else to turn, including people living with AIDS. I'm afraid this fight isn't over yet so we must be vigilant in that regard. Finally, we all must continue to fight against discrimination. Whether it is based on race, sex, income, sexual orientation, or HIV status, discrimination eats away at the foundation of our democracy. Alexis de Tocqueville said in the 1830s that this was a great country because we are a good country. And if we ever stop being a good country, we would no longer be a great country.

TEXT:

Can we send the following thank you letter to the attendees of the services subcommittee briefing on the 24th....Thanks. (List is attached -- you have most of these already)

Dear....

On behalf of the Services Subcommittee of the Presidential Advisory Council on HIV/AIDS, I want to thank you for having taken the time to brief us at our meeting on April 24th.

All the members learned a great deal. The discussion helped advance our understanding of the complexities of addressing the service and care needs of people living with HIV and AIDS. I hope we can count on your continued advice as the Council works to provide additional recommendations to the President on meeting these challenges.

Thanks again for your time and advice

Sincerely,

Edward S. Gould

Chair

Services Subcommittee

SUBJECT: housing for people with disabilities

TO: Jeffrey Levi (LEVI_J) (WHO)

READ: 6-MAY-1996 12:10:19.50

TEXT:

I have been working with HUD and disability groups on getting HUD more sensitive to the needs of people with disabilities. A rather grass-roots group that advocates consumer-directed integrated housing, preferably vouchers rather than project-based, has been working on the Secretary. He now meets with them regularly, and has agreed to set up an office on disability housing. This group believes that a lot of the groups that say they represent people w/disabilities actually represent providers, particularly for AIDS housing.

However, HUD's new sensitivity led it to do something that I understand AIDS groups are upset about: HUD was planning to do some kind of executive order that groups seeking to do segregated AIDS housing could use all kinds of HUD programs without fear of violating Section 504 of the Rehab Act, which prohibits segregated housing. But Cisneros changed his mind after getting exposed to these new arguments. I guess this leaves them only with HOPWA for segregated housing, at least for now.

Just wanted you to know.

Alexis Herman, Assistant to the President and
Director for Public Liaison

Patricia S. Fleming, Director, Office of National
AIDS Policy

Marsha Scott, Deputy Assistant to the President
for Political Affairs

REQUEST: Signing ceremony for reauthorized Ryan White CARE
Act

PURPOSE: To highlight reauthorization of a program that has
been central to the Administration's response to
the HIV/AIDS epidemic.

BACKGROUND: CARE Act programs are the centerpiece of the
services response to the HIV epidemic. Since
President Clinton took office, funding for this

program has more than doubled. This is one
program that unites the entire HIV/AIDS community.

PREVIOUS

PARTICIPATION: n/a

DATE AND TIME: Ten days within receipt of bill.

DURATION: 30 minutes

LOCATION: Roosevelt Room

PARTICIPANTS: The President would sign the bill in front of an
audience of 40 key Administration officials and
leaders of the HIV/AIDS community.

OUTLINE OF

EVENTS: The President would make brief remarks, one person
living with HIV/AIDS would make brief remarks, the
President would sign the bill and depart.

REMARKS: Yes.

MEDIA: Yes.

FIRST LADY: No.

VICE PRESIDENT: No.

RECOMMENDED BY: Carol Rasco, Alexis Herman, Patsy Fleming, and
Marsha Scott

CONTACT: Jeremy Ben

1991-1995"

"India's Railways Relent Over AIDS Passengers"

"A 'First Sane Step'"

Wall Street Journal (05/06/96) P. A14

In a Wall Street Journal editorial, the authors applaud the decision by Congressional leaders to incorporate HIV testing of pregnant women into the Ryan White reauthorization bill. The bill calls for counseling for mothers now, and mandatory testing of newborns in the future if many mothers do not get tested. The so-called Baby AIDS compromise, the editors note, will make prenatal testing more common, allowing more perinatal infections to be prevented through AZT therapy. The editors further point out that testing newborns reveals whether mothers are infected, and thus gives doctors the chance to caution them against breastfeeding. New York State found that mothers often refused testing even after counseling on HIV testing was official policy. The editors claim that the new provision is a victory, noting that it is ridiculous to test for other, more rare diseases in infants and not for HIV.

"Canadian Parents Warned of Bad Blood"

Washington Post (05/06/96) P. A16

The Canadian Red Cross, facing a judicial inquiry into the tainted blood tragedy of the 1980s, is now being questioned about the distribution of blood infected with a deadly brain virus. Toronto's Hospital for Sick Children has notified 525 families that a blood donor died last year of Creutzfeldt-Jakob disease. The risk of getting the disease from a transfusion is very small, but the hospital decided to notify parents and has suggested that other hospitals do the same. The blood products were used at the hospital between 1989 and July 1995.

"Risks of Importing Monkeys"

Washington Post (05/06/96) P. A18; Cohen, Murray J.

In a letter to the editor of the Washington Post, Murray J. Cohen, co-chair of the Medical Research Modernization Committee, points out that articles on the recent outbreak of Ebola virus in monkeys did not mention the human risks of importing monkeys for research. Cohen claims that HIV may be the human form of simian immunodeficiency virus that crossed the species barrier and that AIDS in Central Africa is probably the result of the cross-species transmission of SIV. He also says hepatitis B may have been caused by human exposure to chimpanzees. Other monkey viruses, including Marburg, the macaque herpes B virus, and monkey STLV, can also create risks for humans. Importing monkeys for research, Cohen claims, is dangerous and unwise.

"Price of Hiding Truth on AIDS"

Philadelphia Inquirer (05/03/96) P. B1; Boldt, David

In the Philadelphia Inquirer, columnist David Boldt reacts to a Wall Street Journal article that exposed the government's

exaggeration of the AIDS risk for the general population in order to win popular support for AIDS programs. The article reported that if more money had been devoted to HIV education for the high-risk population, it would have been more effective and lives would have been saved. Boldt says that the media, while aware of the deception, did nothing to disclose it. He points to a book, Michael Fumento's "The Myth of Heterosexual AIDS," which exposed the government's conspiracy in 1990 and resulted in protests by the AIDS activist community. Fumento was fired from his job and widely criticized. Two recent books by gay authors have praised his work, however. Boldt concludes that the media failed to be honest and will probably suffer for it.

"Incidence of AIDS"

Washington Post (05/04/96) P. A14; Murray, David

David Murray, director of research at the Statistical Assessment Service, responds to a recent editorial in the Washington Post that said AIDS statistics reported by the Centers for Disease Control and Prevention were skewed by a change in the definition of AIDS in 1994. In his letter to the editor, Murray claims the newspaper should have objected to the increase in AIDS cases reported in 1994 due to the redefinition. Murray argues that recent evidence proves that the number of new HIV infections is declining nationwide, as the CDC reported, and asserts that "accurate and full reportage of the epidemic" should be the primary concern.

"Obituary: Frankie Mason-Alston, AIDS Activist"

Washington Post (05/04/96) P. B6

Frankie Mason-Alston, an AIDS activist who conducted AIDS education at high schools, churches, civic groups, and universities in the Washington, D.C., area, died of the disease on April 29. Ms. Mason-Alston began her work as an AIDS educator in 1989, working with such organizations as Life Link, the D.C. Women's Council, the Sister Care Program, D.C. public schools, and the Whitman-Walker clinic. Ms. Mason-Alston founded a program in Alexandria, Va. to educate black women about AIDS and also addressed AIDS conferences nationwide.

"Maternal HIV Screening Discussed by Obstetricians at ACOG Meeting"

Reuters (05/03/96)

At the annual clinical meeting of the American College of Obstetricians and Gynecologists in Denver, John W. Larsen of George Washington University and colleagues at NTD Laboratories reported that prenatal maternal serum HIV-1 antibody screening may be feasible. The researchers suggested that screening pregnant women for HIV-1 antibody can be performed along with prenatal birth defect screening during the first or second trimester. The scientists used an HIV-1 antibody assay kit to test 857 samples. Three tested positive "repeatedly," and no false positives or indeterminate results were reported. The test may provide an accurate and effective method to meet the Centers for Disease Control and Prevention's recommended routine HIV counseling and

voluntary testing of all pregnant women, Larsen said. David Jackson and colleagues at Sacred Heart Medical Center reported, meanwhile, that HIV seroprevalence in pregnant women was found to vary widely by geography. Maternal HIV seroprevalence was highest in New York and lowest in Montana.

"Costa Ricans Sue U.S. Lab for Selling Contaminated..."
Xinhua News Agency (05/04/96)

The family members of a group of hemophiliacs in Costa Rica have sued the Miller-Couter Laboratory in a Dallas court for selling HIV-contaminated plasma. The amount of compensation sought will be decided by the jury. Sixty-eight hemophiliacs were infected with HIV between 1985 and 1986.

"Multidrug Tuberculosis Outbreak on an HIV Ward--Madrid, Spain, 1991-1995"
Morbidity and Mortality Weekly Report (04/26/96) Vol. 45, No. 16, P. 330; Herrera, D.; Cano, R.; Godoy, P.; et al.

Between June 1991 and January 1995, multidrug-resistant tuberculosis (MDR-TB) was found in 47 patients and one health care worker in a hospital HIV ward in Madrid, Spain. D. Herrera and colleagues in the Spanish Field Epidemiology Training Program report that their investigation of the outbreak found that nosocomial transmission of MDR-TB occurred in the ward. The average time from the patients' MDR-TB diagnosis to death was 78 days. An analysis showed that patients involved in the outbreak were more likely to have been exposed to potentially infective wardmates and to have more days of exposure than the control patients. Moreover, it revealed that 104 of the isolates from the TB cases were drug-susceptible, while 12 were resistant to one drug and 66 were resistant to isoniazid, streptomycin, ethambutol, and rifampin. An editorial note accompanying the article says the case is the first documented outbreak of nosocomial MDR-TB to be investigated in Spain, but it is similar to previously reported outbreaks elsewhere. To control the outbreak, the MDR-TB patients were isolated; family, community members, and wardmates of the patients were notified and offered isoniazid preventive therapy; hospital staff were notified and most were screened for TB; and personal respiratory protection devices were used by staff exposed to the TB patients.

"India's Railways Relent Over AIDS Passengers"
Lancet (04/27/96) Vol. 347, No. 9009, P. 1178; Kumar, Sanjay

The Indian Railways recently reversed its policy of preventing people with AIDS from traveling on Indian trains. Prior legislation had added AIDS to the list of contagious diseases that can keep passengers off the railways. The Health Ministry tried to get AIDS removed from the list in 1993, but was unsuccessful. Only after intense lobbying by AIDS patients resulted in the media exposing the discriminatory rule did the government remove AIDS from the list.

NEW INFORMATION FROM ACTIS

The AIDS Clinical Trials Information Service (ACTIS) is a central resource providing current information on federally and privately sponsored clinical trials for AIDS patients and others infected with HIV. This service is a Public Health Service project produced collaboratively by the Centers for Disease Control and Prevention, the Food and Drug Administration, the National Institute of Allergy and Infectious Diseases, and the National Library of Medicine. NAC ONLINE, the computerized information service of the CDC National AIDS Clearinghouse, will alert you to any new information collected by ACTIS.

A description of the most recent clinical trial added to the ACTIS database is provided below.

For more information, call the ACTIS toll-free number to talk with a health specialist. On request, you can also obtain a printout of a customized search of the clinical trials databases. The information can also be accessed directly by subscribers through two online databases, AIDSTRIALS and AIDSDRUGS, available through the National Library of Medicine.

AIDS CLINICAL TRIALS INFORMATION SERVICE
1-800-TRIALS-A
(1-800-874-2572)

FAX: 1-301-738-6616
TTY/TDD: 1-800-243-7012
International Line: 1-301-217-0023

PROTOCOL NUMBER: NCI 95 C-183.

TITLE: A Pilot Study of Recombinant Interleukin-2 (IL-2) in Children
and Adolescents With Human Immunodeficiency Virus Infection.

PHASE: Pilot Study.

DISEASE STATUS:

Patients have the following symptoms and conditions: 1.
Documented HIV infection. 2. No new or active opportunistic
infection at study entry requiring acute intervention. 3. CD4
count 500-1000 cells/mm3 if 2-5 years of age or 200-500
cells/mm3 if 6 years or older. 4. Either asymptomatic with CD4
count that renders them at risk for AIDS-related opportunistic
infection OR mild to moderately symptomatic. NOTE: Previously
treated patients may have progressive disease or intolerance to
prior therapy.

PATIENT INCLUSION CRITERIA

SPECIFICATION CRITERIA:

Patients must have:

1. HIV infection.
2. No new or active opportunistic infection.
3. CD4 count 500-1000 cells/mm3 if 2-5 years of age or 200-500
cells/mm3 if 6 years or older.
4. Consent of parent or guardian unless over the age of consent or an
emancipated minor.

AGE: 02 Years - 21 Years.

SEX: M. F.

REPRODUCTIVE SPECIFICATION:

Not pregnant. Negative pregnancy test within 14 days of study entry.

LABORATORY VALUES AT ENTRY

CD4 (T4 CELL) COUNT: 500 - 1000 cells/mm3. if two-five years old. (500 - 600 - 700 - 800 - 900 - 1000). OR 200 - 500 cells/mm3 if six years or older. (200 - 300 - 400 - 500).

PATIENT EXCLUSION CRITERIA

SPECIFICATION CRITERIA:

Patients with the following prior conditions are excluded:

1. Prior intolerance to AZT at 90 mg/m² every 6 hours or ddI at 60 mg/m² every 12 hours.
2. Prior need for therapy to maintain hemoglobin > 8.0 g/dl or neutrophils > 1000 cells/mm³ while on antiretrovirals.

AGE: 01 Days - 01 Years. 22 Years - 99 Years.

REPRODUCTIVE SPECIFICATION:

Pregnant. Positive pregnancy test within 14 days of study entry.

CO-EXISTING CONDITIONS OR DISEASES:

Patients with the following symptoms or conditions are excluded:

1. Critically ill or medically unstable.
2. Current clinical HIV disease progression on combination AZT/ddI.
3. Allergic symptoms to AZT or ddI.
4. Active peripheral neuropathy.
5. Static or progressive encephalopathy.
6. Seizure disorder.
7. Concurrent malignancy or significant autoimmune disease.
8. Concurrent participation in an HIV vaccine trial.
9. Lymphoid interstitial pneumonitis (LIP) requiring treatment with systemic corticosteroids.
10. Pancreatitis.

GENERIC DRUG NAME

Drug 1: Aldesleukin. Immunomodulator.

Drug 2: Zidovudine. Antiretroviral.

Drug 3: Didanosine. Antiretroviral.

DRUG TRADE NAME

Drug 1: Proleukin.

Drug 2: Retrovir.

Drug 3: Videx.

DRUG COMPANIES

Drug 1: Chiron Corporation

4560 Horton Street

Emeryville, CA 94608

Contact: Professional Services (510) 601-3440.

Drug 2: Glaxo Wellcome

5 Moore Drive / PO Box 13398

Research Triangle Park, NC 27709

Contact: Department of Consumer Affairs (800) 437-0992 X 7900.

Drug 3: Bristol - Myers Squibb Company
2400 West Lloyd Expressway
Evansville, IN 47721-0001
Contact: Information (800) 662-7999.

END POINT

Toxicity, pharmacokinetic profile.

DISCONTINUE TREATMENT

Patients discontinue treatment for the following reasons:

1. Cessation of antiretroviral treatment.
2. Unacceptable toxicity.
3. Development of infection that delay IL-2 therapy.
4. HIV disease progression after 12 weeks of IL-2.
5. Development of malignancy that requires systemic therapy.
6. Pregnancy.
7. Patient noncompliance or desire to withdraw from study.

PARTICIPATING UNITS

0000001821:
National Cancer Institute
9000 Rockville Pike / Clinical Center
Bethesda, MD 20892
Contact: Susan Sandelli (301) 402-1391

I just got a copy of an advance memo re the May 17th MMWR. It includes an update on AIDS associated with injecting-drug use: "Through December 31, 1995, a total of 184,359 (36%) of 513,486 AIDS cases reported to CDC were associated with injecting-drug use--161,891 of these cases were in persons who were injecting-drug users (IDUs); 18,710, their heterosexual sex partners; and 3758, children whose mothers were IDUs or sex partners of IDUs. Injecting-drug use is the second most frequently reported HIV risk behavior for adult and adolescent AIDS patients, and 61% of perinatally acquired AIDS is associated with injecting-drug use." Thought this might be useful given our conversation this morning.

"Hormone Has Role in Simian AIDS"

New York Times (05/07/96) P. C3; Kolata, Gina

The sex hormone progesterone, which is especially prevalent in the second half of the menstrual cycle, has been shown to make female monkeys much more vulnerable to SIV, the monkey version of HIV. Preston A. Marx and others at the National Institute of Child Health and Human Development report that 14 of 18 monkeys given the hormone became infected with SIV, compared to just one of 10 monkeys that did not receive the hormone. The results were reported Monday at a meeting of the American Clinical Investigation and the American Federation for Clinical Research. The findings are not necessarily applicable to humans, but experts say the results support earlier theories linking hormone levels and susceptibility. Two contraceptives, the implant Norplant, and Depo Provera, which is injected, contain

progesterone, but experts say the study does not merit a woman changing her method of birth control. Related Stories:
Washington Post (05/07) P. A6; Baltimore Sun (05/07) P. 4A

"Merck's Marketing of an AIDS Drug Draws Fire"

Wall Street Journal (05/07/96) P. B1; Tanouye, Elyse; Waldholz, Michael

Merck & Co.'s distribution of its new AIDS drug Crixivan through Stadtlanders Pharmacy, a mail-order operation, has angered both activists and pharmacists. Activists are calling for protests against Merck and Stadtlanders for providing the drug in limited quantities and at a 37 percent higher cost. A pharmacy group is lobbying federal regulators and Congress to prevent drug companies from restricting distribution of their products, keeping pharmacies from making profits on the drugs. Merck did not expect the controversy, having worked with activists and offering Crixivan at a lower cost than the industry expected. The company said it restricted access to the drug because of limited supply and because once a patient starts taking Crixivan, it is dangerous for them to stop. Crixivan, one of three protease inhibitors to be approved, is considered better than its competitors, and is cheaper, so demand for the drug is especially high.

"Roche AIDS Treatment Is Shown to Prolong Life"

Wall Street Journal (05/07/96) P. B5

Roche Holding announced that study participants who took its new protease inhibitor Invirase in combination with ddC lived longer and had fewer life-threatening health problems than patients who took either of the two drugs alone. The study of 978 patients further demonstrates the success of the new protease inhibitors when used with existing drugs.

"Too Much for AIDS?"

Journal of Commerce (05/07/96) P. 7A; Greenberg, Daniel S.

In the Journal of Commerce, Daniel S Greenberg, editor of Science & Government Report, examines federal funding for AIDS and the public's support of the battle against the disease. On a per-patient basis, Greenberg notes that AIDS research receives more funding than heart disease or cancer, partly due to active lobbying by groups affected by AIDS, including those in the performing arts, fashion, and professional sports. While AIDS has most heavily impacted homosexuals and injection drug users in the United States, the author points out that the heterosexual population is also vulnerable to the disease, especially because heterosexual transmission is common in Asia and Africa. Greenberg concludes that basic research is essential to fight multiple diseases and that funding for AIDS research should be maintained.

"Across the USA: Tennessee"

USA Today (05/07/96) P. 8A

Since 1991, the number of HIV-infected inmates in Tennessee prisons has increased from 28 to 120. Wardens cited unprotected sex between inmates as an explanation for the spread.

"New Facility to Cut Use of U.S. Blood"

Toronto Globe and Mail (05/06/96) P. A5; Picard, Andre

The Canadian Red Cross is opening a new plasma collection facility in Thunder Bay, Ontario, with hopes that it will be able to reduce the amount of blood products imported from the United States. Donors will have their blood extracted, broken down into two major components, and red cells will be returned to the donor as plasma is collected. With the center, Canada could be self-sufficient in plasma by the end of 1998. The country hopes to become the first nation that has a wholly volunteer plasmapheresis program.

"Obituary: Gina Salgado, 17, Warned Students About AIDS Peril"

Chicago Tribune (05/06/96) P. 1-10; Salemy, Shirley

Gina Salgado, who was infected with HIV as an infant through a blood transfusion and who warned high school and college students about AIDS, died Saturday at the age of 17. Miss Salgado was diagnosed with AIDS about 11 years ago and was forced to quit high school as a sophomore. She continued to educate her peers about the disease, however, even after doctors referred her to hospice care a year ago. Miss Salgado tried to warn other students that AIDS does not discriminate and that personal responsibility is the only way to protect oneself.

"WHYY Pulls No Punches in AIDS Show"

Philadelphia Inquirer (05/07/96) P. F9; Storm, Jonathan

Mothers March, a documentary about activist mothers of AIDS patients in the Philadelphia area, reflects the discrimination that AIDS patients experience and emphasizes the fact that anyone can contract HIV, according to television critic Jonathan Storm. Storm notes that the documentary is a powerful presentation of four women who used their illness as a learning experience and a stage from which to launch themselves into new horizons.

"Addressing AIDS at Work"

Business Insurance (04/29/96) Vol. 30, No. 18, P. 14; Roberts, Sally

As AIDS continues to take its toll on those between the ages of 25 and 44, AIDS-related employment discrimination is on the rise. At least one worker is infected at one in 10 of the companies with less than 500 employees and at two-thirds of the companies with more than 2,500 employees. One in seven people in the workforce and one in 12 managers say they know little to nothing about AIDS, according to a Centers for Disease Control and Prevention study. The survey found that many people wrongly believe that HIV can be transmitted through casual contact, bathrooms, and mosquitoes. To combat these and potential legal problems, Angie Hammock, of the CDC's Business and Labor Respond to AIDS programs, suggests using an education and training program for employers. The program includes a written company policy and training on HIV and AIDS issues, such as benefits for infected employees, medical information about HIV transmission, first aid and infection control practices, preventing

discrimination, and maintaining confidentiality. Under OSHA regulations, employers with employees who could "reasonably anticipate" contact with blood or bodily fluids must have written exposure control plans and provide personal protective equipment. Moreover, employers must also comply with the Americans with Disabilities Act, which requires employers to make "reasonable accommodations" for HIV-infected workers.

"Take the Money and Shun"

POZ (04/96) No. 13, P. 27

The Centers for Disease Control and Prevention spent more than a year trying to give a \$1 million grant to Texas' education agency. The grant, which would fund HIV prevention education in the state's public schools, was rejected for fear that the CDC would dictate how schools teach sex education. The grant was suspended in 1994 and almost rejected again in 1995, but eventually, the CDC convinced education head Mike Moses to accept the money. Although the terms of the agreement did require some changes in Texas' sex education program, CDC spokeswoman Michelle Bonds notes that the grant could be interpreted to permit the state's abstinence-based, locally controlled sex education curriculum. In New York City, meanwhile, School Superintendent Rudy Crew disappointed HIV-education advocates when he supported a tamer version of the city's current HIV curriculum, including eliminating a demonstration of the proper way to use a condom.

"Hormone Has Role in Simian AIDS"

New York Times (05/07/96) P. C3; Kolata, Gina

The sex hormone progesterone, which is especially prevalent in the second half of the menstrual cycle, has been shown to make female monkeys much more vulnerable to SIV, the monkey version of HIV. Preston A. Marx and others at the National Institute of Child Health and Human Development report that 14 of 18 monkeys given the hormone became infected with SIV, compared to just one of 10 monkeys that did not receive the hormone. The results were reported Monday at a meeting of the American Clinical Investigation and the American Federation for Clinical Research. The findings are not necessarily applicable to humans, but experts say the results support earlier theories linking hormone levels and susceptibility. Two contraceptives, the implant Norplant, and Depo Provera, which is injected, contain progesterone, but experts say the study does not merit a woman changing her method of birth control. Related Stories: Washington Post (05/07) P. A6; Baltimore Sun (05/07) P. 4A

"Merck's Marketing of an AIDS Drug Draws Fire"

Wall Street Journal (05/07/96) P. B1; Tanouye, Elyse; Waldholz, Michael

Merck & Co.'s distribution of its new AIDS drug Crixivan through Stadtlanders Pharmacy, a mail-order operation, has angered both activists and pharmacists. Activists are calling for protests against Merck and Stadtlanders for providing the drug in limited quantities and at a 37 percent higher cost. A pharmacy group is lobbying federal regulators and Congress to prevent drug companies from restricting distribution of their products, keeping pharmacies from making profits on the drugs. Merck did not expect the controversy, having worked with activists and offering Crixivan at a lower cost than the industry expected. The company said it restricted access to the drug because of limited supply and because once a patient starts taking Crixivan, it is dangerous for them to stop. Crixivan, one of three protease inhibitors to be approved, is considered better than its competitors, and is cheaper, so demand for the drug is especially high.

"Roche AIDS Treatment Is Shown to Prolong Life"

Wall Street Journal (05/07/96) P. B5

Roche Holding announced that study participants who took its new protease inhibitor Invirase in combination with ddC lived longer and had fewer life-threatening health problems than patients who took either of the two drugs alone. The study of 978 patients further demonstrates the success of the new protease inhibitors when used with existing drugs.

"Too Much for AIDS?"

Journal of Commerce (05/07/96) P. 7A; Greenberg, Daniel S.

In the Journal of Commerce, Daniel S Greenberg, editor of Science & Government Report, examines federal funding for AIDS and the public's support of the battle against the disease. On a per-patient basis, Greenberg notes that AIDS research receives more funding than heart disease or cancer, partly due to active lobbying by groups affected by AIDS, including those in the performing arts, fashion, and professional sports. While AIDS has most heavily impacted homosexuals and injection drug users in the United States, the author points out that the heterosexual population is also vulnerable to the disease, especially because heterosexual transmission is common in Asia and Africa. Greenberg concludes that basic research is essential to fight multiple diseases and that funding for AIDS research should be maintained.

"Across the USA: Tennessee"

USA Today (05/07/96) P. 8A

Since 1991, the number of HIV-infected inmates in Tennessee prisons has increased from 28 to 120. Wardens cited unprotected sex between inmates as an explanation for the spread.

"New Facility to Cut Use of U.S. Blood"

Toronto Globe and Mail (05/06/96) P. A5; Picard, Andre

The Canadian Red Cross is opening a new plasma collection facility in Thunder Bay, Ontario, with hopes that it will be able to reduce the amount of blood products imported from the United States. Donors will have their blood extracted, broken down into two major components, and red cells will be returned to the donor as plasma is collected. With the center, Canada could be self-sufficient in plasma by the end of 1998. The country hopes to become the first nation that has a wholly volunteer plasmapheresis program.

"Obituary: Gina Salgado, 17, Warned Students About AIDS Peril"

Chicago Tribune (05/06/96) P. 1-10; Salemy, Shirley

Gina Salgado, who was infected with HIV as an infant through a blood transfusion and who warned high school and college students about AIDS, died Saturday at the age of 17. Miss Salgado was diagnosed with AIDS about 11 years ago and was forced to quit high school as a sophomore. She continued to educate her peers about the disease, however, even after doctors referred her to hospice care a year ago. Miss Salgado tried to warn other students that AIDS does not discriminate and that personal responsibility is the only way to protect oneself.

"WHYY Pulls No Punches in AIDS Show"

Philadelphia Inquirer (05/07/96) P. F9; Storm, Jonathan

Mothers March, a documentary about activist mothers of AIDS patients in the Philadelphia area, reflects the discrimination that AIDS patients experience and emphasizes the fact that anyone can contract HIV, according to television critic Jonathan Storm. Storm notes that the documentary is a powerful presentation of four women who used their illness as a learning experience and a stage from which to launch themselves into new horizons.

"Addressing AIDS at Work"

Business Insurance (04/29/96) Vol. 30, No. 18, P. 14; Roberts, Sally

As AIDS continues to take its toll on those between the ages of 25 and 44, AIDS-related employment discrimination is on the rise. At least one worker is infected at one in 10 of the companies with less than 500 employees and at two-thirds of the companies with more than 2,500 employees. One in seven people in the workforce and one in 12 managers say they know little to nothing about AIDS, according to a Centers for Disease Control and Prevention study. The survey found that many people wrongly believe that HIV can be transmitted through casual contact, bathrooms, and mosquitoes. To combat these and potential legal problems, Angie Hammock, of the CDC's Business and Labor Respond to AIDS programs, suggests using an education and training program for employers. The program includes a written company policy and training on HIV and AIDS issues, such as benefits for infected employees, medical information about HIV transmission, first aid and infection control practices, preventing discrimination, and maintaining confidentiality. Under OSHA regulations, employers with employees who could "reasonably anticipate" contact with blood or bodily fluids must have written exposure control plans and provide personal protective equipment. Moreover, employers must also comply with the Americans with Disabilities Act, which requires employers to make "reasonable accommodations" for HIV-infected workers.

"Take the Money and Shun"

POZ (04/96) No. 13, P. 27

The Centers for Disease Control and Prevention spent more than a year trying to give a \$1 million grant to Texas' education agency. The grant, which would fund HIV prevention education in the state's public schools, was rejected for fear that the CDC would dictate how schools teach sex education. The grant was suspended in 1994 and almost rejected again in 1995, but eventually, the CDC convinced education head Mike Moses to accept the money. Although the terms of the agreement did require some changes in Texas' sex education program, CDC spokeswoman Michelle Bonds notes that the grant could be interpreted to permit the state's abstinence-based, locally controlled sex education curriculum. In New York City, meanwhile, School Superintendent Rudy Crew disappointed HIV-education advocates when he supported a tamer version of the city's current HIV curriculum, including eliminating a demonstration of the proper way to use a condom.

NEW INFORMATION FROM ACTIS

The AIDS Clinical Trials Information Service (ACTIS) is a central resource providing current information on federally and privately sponsored clinical trials for AIDS patients and others infected with HIV. This service is a Public Health Service project produced collaboratively by the Centers for Disease Control and Prevention, the Food and Drug Administration, the National Institute of Allergy and Infectious Diseases, and the National Library of Medicine. NAC ONLINE, the computerized information service of the CDC National AIDS Clearinghouse, will alert you to any new information collected by ACTIS.

A description of the most recent clinical trial added to the ACTIS database is provided below.

For more information, call the ACTIS toll-free number to talk with a health specialist. On request, you can also obtain a printout of a customized search of the clinical trials databases. The information can also be accessed directly by subscribers through two online databases, AIDSTRIALS and AIDSDRUGS, available through the National Library of Medicine.

AIDS CLINICAL TRIALS INFORMATION SERVICE

1-800-TRIALS-A

(1-800-874-2572)

FAX: 1-301-738-6616

TTY/TDD: 1-800-243-7012

International Line: 1-301-217-0023

PROTOCOL NUMBER: NCI 95 C-183.

TITLE: A Pilot Study of Recombinant Interleukin-2 (IL-2) in Children and Adolescents With Human Immunodeficiency Virus Infection.

PHASE: Pilot Study.

DISEASE STATUS:

Patients have the following symptoms and conditions: 1. Documented HIV infection. 2. No new or active opportunistic infection at study entry requiring acute intervention. 3. CD4 count 500-1000 cells/mm³ if 2-5 years of age or 200-500 cells/mm³ if 6 years or older. 4. Either asymptomatic with CD4 count that renders them at risk for AIDS-related opportunistic infection OR mild to moderately symptomatic. NOTE: Previously treated patients may have progressive disease or intolerance to prior therapy.

PATIENT INCLUSION CRITERIA

SPECIFICATION CRITERIA:

Patients must have:

1. HIV infection.
2. No new or active opportunistic infection.
3. CD4 count 500-1000 cells/mm³ if 2-5 years of age or 200-500 cells/mm³ if 6 years or older.
4. Consent of parent or guardian unless over the age of consent or an emancipated minor.

AGE: 02 Years - 21 Years.

SEX: M. F.

REPRODUCTIVE SPECIFICATION:

Not pregnant. Negative pregnancy test within 14 days of study entry.

LABORATORY VALUES AT ENTRY

CD4 (T4 CELL) COUNT: 500 - 1000 cells/mm³. if two-five years old. (500 - 600 - 700 - 800 - 900 - 1000). OR 200 - 500 cells/mm³ if six years or older. (200 - 300 - 400 - 500).

PATIENT EXCLUSION CRITERIA

SPECIFICATION CRITERIA:

Patients with the following prior conditions are excluded:

1. Prior intolerance to AZT at 90 mg/m² every 6 hours or ddI at 60 mg/m² every 12 hours.
2. Prior need for therapy to maintain hemoglobin > 8.0 g/dl or neutrophils > 1000 cells/mm³ while on antiretrovirals.

AGE: 01 Days - 01 Years. 22 Years - 99 Years.

REPRODUCTIVE SPECIFICATION:

Pregnant. Positive pregnancy test within 14 days of study entry.

CO-EXISTING CONDITIONS OR DISEASES:

Patients with the following symptoms or conditions are excluded:

1. Critically ill or medically unstable.
2. Current clinical HIV disease progression on combination AZT/ddl.
3. Allergic symptoms to AZT or ddl.
4. Active peripheral neuropathy.
5. Static or progressive encephalopathy.
6. Seizure disorder.
7. Concurrent malignancy or significant autoimmune disease.
8. Concurrent participation in an HIV vaccine trial.
9. Lymphoid interstitial pneumonitis (LIP) requiring treatment with systemic corticosteroids.
10. Pancreatitis.

GENERIC DRUG NAME

Drug 1: Aldesleukin. Immunomodulator.
Drug 2: Zidovudine. Antiretroviral.
Drug 3: Didanosine. Antiretroviral.

DRUG TRADE NAME

Drug 1: Proleukin.
Drug 2: Retrovir.
Drug 3: Videx.

DRUG COMPANIES

Drug 1: Chiron Corporation
4560 Horton Street
Emeryville, CA 94608
Contact: Professional Services (510) 601-3440.

Drug 2: Glaxo Wellcome
5 Moore Drive / PO Box 13398
Research Triangle Park, NC 27709
Contact: Department of Consumer Affairs (800) 437-0992 X 7900.

Drug 3: Bristol - Myers Squibb Company
2400 West Lloyd Expressway
Evansville, IN 47721-0001
Contact: Information (800) 662-7999.

END POINT

Toxicity, pharmacokinetic profile.

DISCONTINUE TREATMENT

Patients discontinue treatment for the following reasons:

1. Cessation of antiretroviral treatment.
2. Unacceptable toxicity.
3. Development of infection that delay IL-2 therapy.
4. HIV disease progression after 12 weeks of IL-2.
5. Development of malignancy that requires systemic therapy.
6. Pregnancy.
7. Patient noncompliance or desire to withdraw from study.

"A 'First Sane Step'"

Wall Street Journal (05/06/96) P. A14

In a Wall Street Journal editorial, the authors applaud the decision by Congressional leaders to incorporate HIV testing of pregnant women into the Ryan White reauthorization bill. The bill calls for counseling for mothers now, and mandatory testing of newborns in the future if many mothers do not get tested. The so-called Baby AIDS compromise, the editors note, will make prenatal testing more common, allowing more perinatal infections to be prevented through AZT therapy. The editors further point out that testing newborns reveals whether mothers are infected, and thus gives doctors the chance to caution them against breastfeeding. New York State found that mothers often refused testing even after counseling on HIV testing was official policy.

The editors claim that the new provision is a victory, noting that it is ridiculous to test for other, more rare diseases in infants and not for HIV.

"Canadian Parents Warned of Bad Blood"

Washington Post (05/06/96) P. A16

The Canadian Red Cross, facing a judicial inquiry into the tainted blood tragedy of the 1980s, is now being questioned about the distribution of blood infected with a deadly brain virus. Toronto's Hospital for Sick Children has notified 525 families that a blood donor died last year of Creutzfeldt-Jakob disease. The risk of getting the disease from a transfusion is very small, but the hospital decided to notify parents and has suggested that other hospitals do the same. The blood products were used at the hospital between 1989 and July 1995.

"Risks of Importing Monkeys"

Washington Post (05/06/96) P. A18; Cohen, Murray J.

In a letter to the editor of the Washington Post, Murray J. Cohen, co-chair of the Medical Research Modernization Committee, points out that articles on the recent outbreak of Ebola virus in monkeys did not mention the human risks of importing monkeys for research. Cohen claims that HIV may be the human form of simian immunodeficiency virus that crossed the species barrier and that AIDS in Central Africa is probably the result of the cross-species transmission of SIV. He also says hepatitis B may have been caused by human exposure to chimpanzees. Other monkey viruses, including Marburg, the macaque herpes B virus, and monkey STLV, can also create risks for humans. Importing monkeys for research, Cohen claims, is dangerous and unwise.

"Price of Hiding Truth on AIDS"

Philadelphia Inquirer (05/03/96) P. B1; Boldt, David

In the Philadelphia Inquirer, columnist David Boldt reacts to a Wall Street Journal article that exposed the government's exaggeration of the AIDS risk for the general population in order to win popular support for AIDS programs. The article reported that if more money had been devoted to HIV education for the high-risk population, it would have been more effective and lives would have been saved. Boldt says that the media, while aware of the deception, did nothing to disclose it. He points to a book, Michael Fumento's "The Myth of Heterosexual AIDS," which exposed the government's conspiracy in 1990 and resulted in protests by the AIDS activist community. Fumento was fired from his job and widely criticized. Two recent books by gay authors have praised his work, however. Boldt concludes that the media failed to be honest and will probably suffer for it.

"Incidence of AIDS"

Washington Post (05/04/96) P. A14; Murray, David

David Murray, director of research at the Statistical Assessment Service, responds to a recent editorial in the Washington Post that said AIDS statistics reported by the Centers for Disease Control and Prevention were skewed by a change in the

definition of AIDS in 1994. In his letter to the editor, Murray claims the newspaper should have objected to the increase in AIDS cases reported in 1994 due to the redefinition. Murray argues that recent evidence proves that the number of new HIV infections is declining nationwide, as the CDC reported, and asserts that "accurate and full reportage of the epidemic" should be the primary concern.

"Obituary: Frankie Mason-Alston, AIDS Activist"

Washington Post (05/04/96) P. B6

Frankie Mason-Alston, an AIDS activist who conducted AIDS education at high schools, churches, civic groups, and universities in the Washington, D.C., area, died of the disease on April 29. Ms. Mason-Alston began her work as an AIDS educator in 1989, working with such organizations as Life Link, the D.C. Women's Council, the Sister Care Program, D.C. public schools, and the Whitman-Walker clinic. Ms. Mason-Alston founded a program in Alexandria, Va. to educate black women about AIDS and also addressed AIDS conferences nationwide.

"Maternal HIV Screening Discussed by Obstetricians at ACOG Meeting"

Reuters (05/03/96)

At the annual clinical meeting of the American College of Obstetricians and Gynecologists in Denver, John W. Larsen of George Washington University and colleagues at NTD Laboratories reported that prenatal maternal serum HIV-1 antibody screening may be feasible. The researchers suggested that screening pregnant women for HIV-1 antibody can be performed along with prenatal birth defect screening during the first or second trimester. The scientists used an HIV-1 antibody assay kit to test 857 samples. Three tested positive "repeatedly," and no false positives or indeterminate results were reported. The test may provide an accurate and effective method to meet the Centers for Disease Control and Prevention's recommended routine HIV counseling and voluntary testing of all pregnant women, Larsen said. David Jackson and colleagues at Sacred Heart Medical Center reported, meanwhile, that HIV seroprevalence in pregnant women was found to vary widely by geography. Maternal HIV seroprevalence was highest in New York and lowest in Montana.

"Costa Ricans Sue U.S. Lab for Selling Contaminated..."

Xinhua News Agency (05/04/96)

The family members of a group of hemophiliacs in Costa Rica have sued the Miller-Couter Laboratory in a Dallas court for selling HIV-contaminated plasma. The amount of compensation sought will be decided by the jury. Sixty-eight hemophiliacs were infected with HIV between 1985 and 1986.

"Multidrug Tuberculosis Outbreak on an HIV Ward--Madrid, Spain, 1991-1995"

Morbidity and Mortality Weekly Report (04/26/96) Vol. 45, No. 16, P. 330; Herrera, D.; Cano, R.; Godoy, P.; et al.

Between June 1991 and January 1995, multidrug-resistant

tuberculosis (MDR-TB) was found in 47 patients and one health care worker in a hospital HIV ward in Madrid, Spain. D. Herrera and colleagues in the Spanish Field Epidemiology Training Program report that their investigation of the outbreak found that nosocomial transmission of MDR-TB occurred in the ward. The average time from the patients' MDR-TB diagnosis to death was 78 days. An analysis showed that patients involved in the outbreak were more likely to have been exposed to potentially infective wardmates and to have more days of exposure than the control patients. Moreover, it revealed that 104 of the isolates from the TB cases were drug-susceptible, while 12 were resistant to one drug and 66 were resistant to isoniazid, streptomycin, ethambutol, and rifampin. An editorial note accompanying the article says the case is the first documented outbreak of nosocomial MDR-TB to be investigated in Spain, but it is similar to previously reported outbreaks elsewhere. To control the outbreak, the MDR-TB patients were isolated; family, community members, and wardmates of the patients were notified and offered isoniazid preventive therapy; hospital staff were notified and most were screened for TB; and personal respiratory protection devices were used by staff exposed to the TB patients.

"India's Railways Relent Over AIDS Passengers"

Lancet (04/27/96) Vol. 347, No. 9009, P. 1178; Kumar, Sanjay

The Indian Railways recently reversed its policy of preventing people with AIDS from traveling on Indian trains. Prior legislation had added AIDS to the list of contagious diseases that can keep passengers off the railways. The Health Ministry tried to get AIDS removed from the list in 1993, but was unsuccessful. Only after intense lobbying by AIDS patients resulted in the media exposing the discriminatory rule did the government remove AIDS from the list.

DRAFT/May 7, 1996: Ryan White CARE Act Signing Statement

THE WHITE HOUSE

Office of the Press Secretary

For Immediate Release
1996

May 6,

STATEMENT OF THE PRESIDENT

Today, with mixed emotions, I sign into law S. 641, the "Ryan White Comprehensive AIDS Resources Emergency (CARE) Act Amendments of 1996." It is a law that in my heart I wish were not necessary. But while in recent years we have made significant and promising advances in our collective battle against HIV, the virus that causes AIDS, the war against the virus continues. It is a war that will be won, but until that day arrives, S. 641 ensures that the Ryan White CARE program will be there.

Under S. 641, the Ryan White CARE program will continue to provide direct services to people living with HIV and AIDS through grants to states, cities, community organizations, and local clinics. It emphasizes outpatient care in clinics and other facilities and is designed to relieve the burden on public hospitals and other more expensive inpatient treatment facilities.

Six short years ago when the Ryan White CARE Act was first enacted, a cumulative total of over 128,000 cases of AIDS had been reported to the Centers for Disease Control (CDC) and over 70,000 Americans had died of the disease. As of December, 1995--over 506,000 cases have been reported and there have been almost 316,000 American deaths. We as individuals and as a nation cannot appreciate the loss of so many young people. It is estimated that over 1 million Americans are now living with HIV disease. CDC estimates that 43,000 become infected every year.

AIDS has become the leading cause of death for all Americans aged 25 to 44. The epidemic continues to spread geographically moving into more and more communities throughout the United States in both urban and rural areas. It is increasingly manifesting itself in populations of women, youth, minorities, children, and families. From the 10,000 plus children orphaned in Manhattan alone by the death of both parents from HIV, to the 22 year old heterosexual woman in Kansas City realizing her own

HIV disease after learning her daughter had contracted the virus from her, this epidemic has no walls and has afforded no relief.

Prior to the Ryan White CARE Act, there were many communities whose health care infrastructure was literally collapsing under the sudden and intense burden posed by AIDS. There were many individuals with HIV who were not receiving needed health care and support services. States, cities, and individual service providers were struggling to provide care for growing numbers of people with HIV who increasingly came from disenfranchised groups, with little or no income, without health insurance or other sources of support to pay for needed care. Communities needed to be able to provide care to these individuals, not only to prolong and improve the quality of their lives, but also to prevent loss of access to care by people with other diseases from saturation of emergency and primary care services.

As the epidemic continues to grow, the passage and enactment of S. 641 acknowledges that we face an evolving public health crisis that is more significant today than it was when the Ryan White CARE Act was signed into law. Initially sixteen cities were impacted: Boston, San Francisco, Los Angeles, Newark, New York City, Philadelphia, Chicago, Houston and Miami. Today forty-nine cities have been hit hard enough to qualify for Ryan White funding, including the original sixteen plus Kansas City, St. Louis, Phoenix, Seattle, Denver, New Haven, San Antonio, Tampa, and twenty-five other cities.

Despite these harsh realities we are beginning to win the war against HIV/AIDS. The success of our biomedical research, prevention efforts and treatment programs are evidenced by new and exciting therapies and interventions that are helping people avoid infection with HIV and AIDS, and for those already infected, to lead more productive lives in their communities.

We have learned through studies supported by the National Institutes of Health that providing AZT to pregnant women who are infected can reduce transmission of the virus to their infants by over 30 percent. With this knowledge it is clear, and we have recommended, that the voluntary testing and counseling of all pregnant women should be the standard of care in America. Most recently we have been heartened by the rapid approval by the Food and Drug Administration of new therapies, protease inhibitors, that may, in combination with other drugs eliminate the presence of the AIDS virus in the blood. But much research remains to be done, the war is not yet won.

Until then, the Ryan White CARE program will continue to help all people dependent on our health care system access care related services. And, by shortening hospitalization time and use of emergency rooms, CARE Act programs will continue to reduce the burden on hospitals so that millions of Americans who do not have AIDS will have continued access to health care in their

communities.

The challenge of providing compassionate care to the growing number of Americans infected with the AIDS virus during the rest of this decade will require our greatest efforts. Now, with enactment of S. 641, we can continue to build upon the partnerships established under the Ryan White CARE Act so that State and local communities can persevere in this challenge with the necessary resources to provide a continuum of care with dignity.

It is appropriate that this measure is best known as the Ryan White CARE Act. First, for the 13 year-old boy named Ryan White who inspired all of us with his courage in facing the deadly disease called AIDS. And, also for the targeted national effort to support care, and hope, at the local level.

When first enacted into law, it was noted that the young Ryan White had. . ., "introduced to people across America and across the world a face of AIDS that caring human beings could not turn their back upon." During his six year fight against HIV, Ryan taught us all to recognize the needs of people with AIDS and to help provide those people with the care they need.

The overwhelming majorities by which this measure has been reenacted by both chambers of the Congress sends a clear message that America continues to care about the thousands of Americans for whom this program has a dramatic impact on the quality and length of their lives. This unanimous commitment to our fellow Americans living with HIV/AIDS reinstills the faith, and the hope, we all hold for our Nation.

CDC National AIDS Clearinghouse
Conference Calendar Database

NEW CONFERENCE LISTINGS
May 8, 1996

The Clearinghouse's Conference Calendar Database contains information about upcoming conferences related to HIV and AIDS.

NAC ONLINE users can search this database by selecting "Clearinghouse Databases" from the NAC ONLINE main menu. When asked to enter a database name, specify "CONF" to search the Calendar.

To access the NAC ONLINE BBS, set your communications software to dial (800) 851-7245, and set the options for 8 data bits, N parity, 1 stop bit, full duplex, and complete a new user questionnaire. Only non-profit organizations, government agencies, educational institutions, and health departments are given full access to NAC ONLINE and the NAC databases.

Overnight, 5 new listings and 2 updates were loaded to the Conference Calendar Database. Their records follow:

TITLE: Latinos at the Crossroads: Time for Action; Annual Conference
DATE: July 14-17, 1996
LOCATION: Denver, CO
SPONSOR(S): National Council of La Raza (NCLR)
CONTACT: National Council of La Raza (NCLR), 1111 19th St., NW, Ste. 1000, Washington, DC 20036, (202) 785-1670, FAX: (202) 776-1790.
EVENT TYPE: Conference
TOPICS: Hispanics / Latinos / Latinas. Substance abuse. Schools. Education. Women. Housing. Community organizations. Federal government. Children. Rural populations. Immigrants or refugees.
NOTES: Fee: Before June 17, \$300; After June 17, \$350. Child/student before June 17, \$125; Child/student after June 17, \$150; NCLR Affiliate member before June 17, \$160; NCLR Affiliate member after June 17, \$210; NCLR Individual Associate member before June 17, \$225; NCLR Individual Associate member after June 17,

\$275. Sponsorships available.

TITLE: 7th Annual HIV- Meeting the Challenge: Prevention and Health Maintenance Strategies

DATE: May 14-15, 1996

LOCATION: Fairfax, VA

SPONSOR(S): Office of HIV Services, Northern Virginia HIV Resource and Consultation Center; American Psychological Association's HOPE Program; Asian and Pacific Islander Partnership for Health; Center for HIV/Substance Abuse Trainign; Children's National Medical Center, Department of Hematology/Oncology; Children's National Medical Center, Project Children's HIV/AIDS Modeling Program; CSAT AIDS Outreach Technical Assistance/HI-TECH International; Fairfax County Department of Health; Fairfax/Falls Church Community Services Board, Alcohol and Drug Services; Family AIDS Network, Inc.; George Mason University, College of Nursing and Health Sciences; Health Resources and Services Administration, Division of Programs for Special Populations; Hospice of Northern Virginia; Infectious Disease Physicians, Inc.; Inova Health System, Life with Cancer; Mid-Atlantic AIDS Education and Training Center, Delaware Area AIDS Resource Center, District of Columbia Local Performance Site at Howard University; National Institutes of Health, National Institute of Allergy and Infectious Diseases; National Network for Youth; NE Place Clinic; Northern Virginia AIDS Ministry; Northern Virginia Idea Center; Organizational Ideas; Prince William Health District; University of the District of Columbia/Cooperative Extension Service-Project HIPS; Whitman-Walker Clinic

CONTACT: Education and Conference Services, P.O. Box 12006, Falls Church, VA 22042, (703) 204-3780, (703) 204-3333, FAX: (703) 204-3798

EVENT TYPE: Conference

TOPICS: Adolescents. Pediatrics. Substance abuse. Mental health. Cultural factors. Psychological factors. Education. Health professional education. Epidemiology. Treatment. Research programs. Risk reduction. Psychological factors. Intervention strategies. Nutrition. Outreach. AZT. Pregnancy. Therapeutic drugs. Mental health. Children. Grief. Death or dying. Sex workers.

NOTES: Fee: Physicians, \$130; Non-physicians, \$105; Single day fee, \$60. CME, RN CEU, SW CEU credits available.

TITLE: HIV and Pregnancy: Practitioners' Perspectives

DATE: July 24, 1996

LOCATION: Stony Brook, NY

SPONSOR(S): AIDS Education and Resource Center, School of Health Technology and Management

CONTACT: Sabina Steiner, MSN, MPH, (516) 444-3209

EVENT TYPE: Lecture

TOPICS: Education. Pregnancy. Women.

TITLE: HIV and Pregnancy: Counseling, Testing, and the Use of AZT
DATE: June 18, 1996
LOCATION: Stony Brook, NY
SPONSOR(S): AIDS Education and Resource Center, School of Health Technology
and Management
CONTACT: Sabina Steiner, MSN, MPH, (516) 444-3209
EVENT TYPE: Lecture
TOPICS: Education. Pregnancy. Counseling. Counselor education. AZT.
Women.
NOTES: There will be over 70 downlink sites in nearly every part of
Pennsylvania. Contact the Distance Learning Center at (800)
446-5607 in PA or (412) 961-0294, ext. 285 or 292 to register
for a downlink site.

TITLE: AIDS 96: Common Agenda, Uncommon Response
DATE: June 3-5, 1996
LOCATION: Grantville, PA
SPONSOR(S): Family Health Council; South Central Pennsylvania AIDS Planning
Coalition
CONTACT: Shermer and Associates, 587 James Dr., Harrisburg, PA
17112-2273, (717) 545-9991, FAX: (717) 545-9247
EVENT TYPE: Conference
TOPICS: Health professional education. Families of persons with
HIV/AIDS.
NOTES: Sponsorships and exhibitors' spaces available.

TITLE: HIV/AIDS Housing Conference; Second Annual
DATE: August 22-25, 1996
LOCATION: Seattle, WA
SPONSOR(S): AIDS Housing of Washington; AIDS Action Council, AIDS National
Interfaith Network; Corporation for Supportive Housing;
Enterprise Foundation; Fannie Mae Foundation; Harm Reduction
Coalition; Housing Assistance Council; National AIDS Housing
Coalition; National American Indian Housing Council; National
Association of People Living with AIDS; National Coalition for
the Homeless; National Council of La Raza; National Low Income
Housing Coalition; National Minority AIDS Council; Seattle/King
County Housing Development Consortium; Washington Low Income
Housing Congress
CONTACT: Therese Doran, Conference Registrar, AIDS Housing of Washington,
2025 First Ave., Ste. 420, Seattle, WA 98121-2100, (206)
443-3330, FAX: (206) 441-9485
EVENT TYPE: Conference
TOPICS: Housing. Financial issues. Minorities. Advocacy. Community
organizations. Death or dying.
NOTES: Fee: Conference only, \$300; Conference, 3 nights of housing, and
9 meals, \$475; Conference, 4 nights of housing, and 11 meals,
\$525. Scholarships available. Discounts for members of

sponsoring organizations, Washington State AIDS Housing providers, payment received before May 15, and double occupancy in room.

TITLE: Protease Inhibitor Update
DATE: May 15, 1996
LOCATION: Providence, RI
SPONSOR(S): Brown University School of Medicine; Brown University AIDS Program
CONTACT: Brown University AIDS Program, Box G-S204, Brown University, Providence, RI 02912
EVENT TYPE: Lecture
TOPICS: Therapeutic drugs. Treatment. Clinical trials. Virology. Immunology. Antiviral drugs.
NOTES: Continuing education credits available.

Information about additional conferences is welcome. Please send E-Mail to Flynn McLean (through NAC ONLINE, or fmclean@cdcnac.aspensys.com via the Internet) at the CDC National AIDS Clearinghouse; include the title, dates, site, sponsoring agency, contact information, registration fee, and topics to be discussed at the conference.

"AIDS Drug Combination"

Washington Post (05/08/96) P. A2

Hoffman-La Roche has announced that its protease inhibitor saquinavir, when used in combination with ddC, prolongs the lives of patients. Saquinavir has been considered the weakest of the three approved protease inhibitors, and only Abbott Laboratories' Ritonavir has been proven to lower the risk of death until now. Roche has requested that the Food and Drug Administration consider adding the new information to saquinavir's label. The 73-week study found the combination of saquinavir and ddC to be more effective than either drug alone. Related Story: USA Today (05/08) P. 4D

"Roche Upbeat on New Treatment for AIDS"

Financial Times (05/08/96) P. 16; Green, Daniel

Hoffman-La Roche Chairman Fritz Gerber said that Invirase is expected to become one of the "top drugs" of several product releases planned by the company. Roche reported Tuesday that Invirase, when used with its older AIDS drug Hivid (ddC), reduced the rate of deaths by more than two-thirds compared to Hivid alone and resulted in a decline in AIDS-defining symptoms. Roche expects Invirase, which has been approved in the United States for use in combination therapy and advanced HIV infection, to be approved in Canada and Europe later this year. Franz Humer, director of Roche's pharmaceuticals division, said he expected annual sales of Invirase to reach at least \$160.9 million within five years.

"Minority Coalition Targets 'AIDS Ride'"

Philadelphia Inquirer (05/08/96) P. B1; Collins, Huntly

A controversy has erupted in the Philadelphia AIDS community over which AIDS groups will receive proceeds from a Philadelphia-to-Washington, D.C., bike ride. The event is expected to raise \$5 million for groups in both cities. But a coalition of minority AIDS groups has charged that it will not share in the profit of the white-run AIDS fundraiser and has called for a boycott of the event. The minority groups have also said that they can fight the city's AIDS epidemic, largely affecting African Americans and Latinos, better than the AIDS groups run by whites. The AIDS organizations under attack note that the majority of their clients are blacks and Latinos.

"Infant at Hospital Stuck With HIV-Infected Needle"

Chicago Tribune (05/07/96) P. 1-7; Fegelman, Andrew

While receiving treatment for a respiratory infection at Wyler Children's Hospital in Chicago, a four-month old girl was stuck with an HIV-infected needle earlier this year. While the girl has tested negative for HIV, doctors have recommended that she receive anti-HIV medical treatment as a precaution. The girl's parents have sued the University of Chicago Hospitals and Clinics, which operates the hospital. The girl, a twin born on Jan. 7 and brought to Wyler on Jan. 30, was to be discharged on Feb. 12, when a nurse found a hypodermic needle stuck in the child's leg. Blood extracted from the needle tested positive for HIV, but hospital officials said the chance of infection is small.

"Interleukin-2 Therapy for HIV Warrants Expanded Trials"

Reuters (05/07/96)

A study testing periodic infusions of the cytokine interleukin 2 (IL-2) in patients with progressive HIV infection has shown that the treatment is promising enough to merit a larger study. The results of the Phase II trial were presented at Biomedicine '96, a combined meeting of scientific societies, by H. Clifford Lane of the National Institute of Allergy and Infectious Diseases. The IL-2 therapy has the potential to increase and maintain CD4 cell counts in patients with progressive HIV infection, Lane said. A related study found that

asymptomatic people with HIV can safely receive low doses of IL-2 without toxic side effects for at least six months.

"Kenyan Government Bans Sales of Anti-AIDS Drug"

Reuters (05/08/96)

Concerned about the controversy surrounding a drug touted as an AIDS cure, the Kenyan government has banned sales of the herbal drug Pearl-Omega until the Ministry of Health's Pharmacy and Poisons Board issues its report. The board met with Professor Arthur Obel, who claims discovery of the as-of-yet-unapproved drug, on Tuesday. Kenya has one of the highest AIDS rates in sub-Saharan Africa.

"Asian Youth Educated to Combat AIDS"

Xinhua News Agency (05/07/96)

A group of 10,000 young people in China and other Asian countries are preparing to fight the spread of HIV. The peer-group educators will be trained in the coming years to be part of the First-Ever Cross Border AIDS Prevention Program. Led by the Asian Red Cross and Red Crescent AIDS Task Force, a manual on reproductive health and AIDS has been created to be used for the young people's training. The campaign will also focus on reducing the spread of HIV in women, who are vulnerable to the virus because they must depend on their partners to take safe sex precautions. An estimated 50,000 to 100,000 people in China have HIV.

"Woman With TB Committed to Hospital"

United Press International (05/07/96)

A woman with tuberculosis (TB) was ordered to be committed to a hospital Monday at the request of St. Louis County Assistant Counselor Don Williams. The court order was requested after she refused to take her TB medication three times. The woman, who also has syphilis and HIV, wore a face mask to court. While people with contagious diseases have the right to refuse treatment, health officials noted that authorities also have the right to force them to undergo treatment to protect others.

"Quality of Life and Coping Styles of HIV-Positive Women With Children"

Journal of the Association of Nurses in AIDS Care (03/96-04/96)
Vol. 7, No. 2, P. 28; Rose, Molly A.; Clark-Alexander, Barbara

The growing AIDS epidemic among women disproportionately affects racial and ethnic minorities, especially in the northeast and southern United States. Mothers infected with HIV face especially daunting physical, emotional, social, and spiritual problems. Moreover, many women are not aware they have HIV until their infants test positive. Dr. Molly A. Rose, of the Medical College of Pennsylvania, and Barbara Clark-Alexander, of the University of South Florida, conducted a study of 52 HIV-positive mothers between the ages of 18 and 39 to determine their perceived quality of life and their coping strategies. The women scored highest in the social and physical quality of life subscales and lowest in the psychological subscale. Among the

coping styles employed, confrontive was used most frequently and was significantly related to physical quality of life. Passive coping was related to total and physical quality of life, while emotive coping was related to total, psychological, and physical quality of life. The low scores in the psychological quality of life scale suggest that the psychological aspects of HIV and AIDS should be a major focus of patient care, especially as the disease progresses.

"Review Calls Avanti Safe; Expert Questions Validity"

AIDS Alert (04/96) Vol. 11, No. 4, P. 45

A review of company studies of the Avanti polyurethane condom suggests that it slips and breaks less often or with the same frequency as latex condoms. Results of another study of the plastic condom, sponsored by the National Institute of Child Health and Human Development (NICHD), are expected later this spring. The government study was requested by the Food and Drug Administration after previous studies showed high breakage rates with the new condom. Approved in 1991 for latex-sensitive individuals, Avanti is the only male condom, other than lamb skin, available for the estimated 1 percent to 2 percent of the general population that is sensitive to latex. Experts expect more people to develop greater sensitivity to latex with repeated exposure. Meanwhile, the maker of Avanti, London International Group of Cambridge, England, reported that the condoms broke at a rate of 0.9 percent and that latex condoms broke at a rate of 2.1 percent. These study results contradicted pilot NICHD studies, however, and the FDA later asked the company and the NICHD conduct new research. Several other plastic condoms have been submitted to the FDA for approval, and a thicker version of Avanti was approved last year.

Anita--

As you know, NASTAD is having their annual meeting this week. I heard from one state AIDS director a concern that your July meeting limits states to 2 people, while giving Title I grantees 4 slots -- yet encourages states to bring consumers. Is there any flexibility there -- since some of the state programs are big enough to warrant several representatives in addition to consumers?

Thanks.

Jeff

Scott just called me to follow-up on the status of the "annual report."

Council members have been forwarding changes/revisions to us to incorporate into the report. Scott asked if we would prepare a chart to show what the suggested changes have been and fax it to all the "Assessment Ad Hoc" committee members by their next scheduled conference call, Wed., May 15.

But, I also received a call from Linda this morning instructing us to stop all work related to the Pres. Council's Report. So, I will leave it to you to discuss this with Scott....I didn't say anything to him on the phone.

"AIDS Drug Combination"

Washington Post (05/08/96) P. A2

Hoffman-La Roche has announced that its protease inhibitor saquinavir, when used in combination with ddC, prolongs the lives of patients. Saquinavir has been considered the weakest of the three approved protease inhibitors, and only Abbott Laboratories' Ritonavir has been proven to lower the risk of death until now. Roche has requested that the Food and Drug Administration consider adding the new information to saquinavir's label. The 73-week study found the combination of saquinavir and ddC to be more effective than either drug alone. Related Story: USA Today (05/08) P. 4D

"Roche Upbeat on New Treatment for AIDS"

Financial Times (05/08/96) P. 16; Green, Daniel

Hoffman-La Roche Chairman Fritz Gerber said that Invirase is expected to become one of the "top drugs" of several product releases planned by the company. Roche reported Tuesday that Invirase, when used with its older AIDS drug Hivid (ddC), reduced the rate of deaths by more than two-thirds compared to Hivid alone and resulted in a decline in AIDS-defining symptoms. Roche expects Invirase, which has been approved in the United States for use in combination therapy and advanced HIV infection, to be approved in Canada and Europe later this year. Franz Humer, director of Roche's pharmaceuticals division, said he expected annual sales of Invirase to reach at least \$160.9 million within five years.

"Minority Coalition Targets 'AIDS Ride'"

Philadelphia Inquirer (05/08/96) P. B1; Collins, Huntly

A controversy has erupted in the Philadelphia AIDS community over which AIDS groups will receive proceeds from a Philadelphia-to-Washington, D.C., bike ride. The event is expected to raise \$5 million for groups in both cities. But a coalition of minority AIDS groups has charged that it will not share in the profit of the white-run AIDS fundraiser and has called for a boycott of the event. The minority groups have also said that they can fight the city's AIDS epidemic, largely affecting African Americans and Latinos, better than the AIDS groups run by whites. The AIDS organizations under attack note that the majority of their clients are blacks and Latinos.

"Infant at Hospital Stuck With HIV-Infected Needle"

Chicago Tribune (05/07/96) P. 1-7; Fegelman, Andrew

While receiving treatment for a respiratory infection at Wyler Children's Hospital in Chicago, a four-month old girl was stuck with an HIV-infected needle earlier this year. While the girl has tested negative for HIV, doctors have recommended that she receive anti-HIV medical treatment as a precaution. The

girl's parents have sued the University of Chicago Hospitals and Clinics, which operates the hospital. The girl, a twin born on Jan. 7 and brought to Wyler on Jan. 30, was to be discharged on Feb. 12, when a nurse found a hypodermic needle stuck in the child's leg. Blood extracted from the needle tested positive for HIV, but hospital officials said the chance of infection is small.

"Interleukin-2 Therapy for HIV Warrants Expanded Trials"
Reuters (05/07/96)

A study testing periodic infusions of the cytokine interleukin 2 (IL-2) in patients with progressive HIV infection has shown that the treatment is promising enough to merit a larger study. The results of the Phase II trial were presented at Biomedicine '96, a combined meeting of scientific societies, by H. Clifford Lane of the National Institute of Allergy and Infectious Diseases. The IL-2 therapy has the potential to increase and maintain CD4 cell counts in patients with progressive HIV infection, Lane said. A related study found that asymptomatic people with HIV can safely receive low doses of IL-2 without toxic side effects for at least six months.

"Kenyan Government Bans Sales of Anti-AIDS Drug"
Reuters (05/08/96)

Concerned about the controversy surrounding a drug touted as an AIDS cure, the Kenyan government has banned sales of the herbal drug Pearl-Omega until the Ministry of Health's Pharmacy and Poisons Board issues its report. The board met with Professor Arthur Obel, who claims discovery of the as-of-yet-unapproved drug, on Tuesday. Kenya has one of the highest AIDS rates in sub-Saharan Africa.

"Asian Youth Educated to Combat AIDS"
Xinhua News Agency (05/07/96)

A group of 10,000 young people in China and other Asian countries are preparing to fight the spread of HIV. The peer-group educators will be trained in the coming years to be part of the First-Ever Cross Border AIDS Prevention Program. Led by the Asian Red Cross and Red Crescent AIDS Task Force, a manual on reproductive health and AIDS has been created to be used for the young people's training. The campaign will also focus on reducing the spread of HIV in women, who are vulnerable to the virus because they must depend on their partners to take safe sex precautions. An estimated 50,000 to 100,000 people in China have HIV.

"Woman With TB Committed to Hospital"
United Press International (05/07/96)

A woman with tuberculosis (TB) was ordered to be committed to a hospital Monday at the request of St. Louis County Assistant Counselor Don Williams. The court order was requested after she refused to take her TB medication three times. The woman, who also has syphilis and HIV, wore a face mask to court. While people with contagious diseases have the right to refuse

treatment, health officials noted that authorities also have the right to force them to undergo treatment to protect others.

"Quality of Life and Coping Styles of HIV-Positive Women With Children"

Journal of the Association of Nurses in AIDS Care (03/96-04/96)
Vol. 7, No. 2, P. 28; Rose, Molly A.; Clark-Alexander, Barbara

The growing AIDS epidemic among women disproportionately affects racial and ethnic minorities, especially in the northeast and southern United States. Mothers infected with HIV face especially daunting physical, emotional, social, and spiritual problems. Moreover, many women are not aware they have HIV until their infants test positive. Dr. Molly A. Rose, of the Medical College of Pennsylvania, and Barbara Clark-Alexander, of the University of South Florida, conducted a study of 52 HIV-positive mothers between the ages of 18 and 39 to determine their perceived quality of life and their coping strategies. The women scored highest in the social and physical quality of life subscales and lowest in the psychological subscale. Among the coping styles employed, confrontive was used most frequently and was significantly related to physical quality of life. Passive coping was related to total and physical quality of life, while emotive coping was related to total, psychological, and physical quality of life. The low scores in the psychological quality of life scale suggest that the psychological aspects of HIV and AIDS should be a major focus of patient care, especially as the disease progresses.

"Review Calls Avanti Safe; Expert Questions Validity"

AIDS Alert (04/96) Vol. 11, No. 4, P. 45

A review of company studies of the Avanti polyurethane condom suggests that it slips and breaks less often or with the same frequency as latex condoms. Results of another study of the plastic condom, sponsored by the National Institute of Child Health and Human Development (NICHD), are expected later this spring. The government study was requested by the Food and Drug Administration after previous studies showed high breakage rates with the new condom. Approved in 1991 for latex-sensitive individuals, Avanti is the only male condom, other than lamb skin, available for the estimated 1 percent to 2 percent of the general population that is sensitive to latex. Experts expect more people to develop greater sensitivity to latex with repeated exposure. Meanwhile, the maker of Avanti, London International Group of Cambridge, England, reported that the condoms broke at a rate of 0.9 percent and that latex condoms broke at a rate of 2.1 percent. These study results contradicted pilot NICHD studies, however, and the FDA later asked the company and the NICHD conduct new research. Several other plastic condoms have been submitted to the FDA for approval, and a thicker version of Avanti was approved last year.

TEXT:

Carol is traveling to:

1. California Thursday and Friday of this week
2. Nevada Mon-Wed of next week
3. NJ Wed-Thurs of next week.

She has asked that each of you let me know of any hot issues in either California, Nevada or New Jersey that you may be aware of and get to me (no later than 6:00pm tonight for California issues) appropriate talking points or a one page summary of the issues. I would also appreciate getting the NV and NJ hot issues and briefings no later than 6:00pm tonight, but if that becomes impossible for you, then you can retype it into the computer and email the notes or talking points to Carol yourself over the weekend (no later than Sun morning).

Two issues she mentioned re: Nevada include:

1. The storage / destruction of radioactive material with Yucca Mountain part of that issue.
2. Also, the issue of Indian gaming

Thank you very much for your help with this.
