"Japan AIDS Scandal Raises Fear That Safety Came Second to Trade"
Wall Street Journal (10/09/96) P. A1; Hamilton, David P.

Although U.S. drug companies had safe, heat-treated blood products available between 1983 and 1985, the Japanese government did not allow them to be imported in order to protect domestic companies. During that time, more than 1,800 Japanese hemophiliacs contracted HIV. Some 400 have already died. Many Japanese see the scandal as an example of the conflicts-of-interest that link bureaucrats and industry executives, and often put business interests before public safety. A former government official, two former drug industry executives, and one leading hemophilia researcher have been arrested on charges related to the tainted-blood scandal. Earlier this year, current Health Minister Naoto Kan forced the government to both investigate the scandal and to reveal incriminating internal documents.

"Morrison Receives Offers to Fight"

New York Times (10/09/96) P. B10

George Foreman has said he will fight heavyweight Tommy Morrison, who announced that he wants to return to the ring despite the fact that he has HIV. Foreman is scheduled to fight Crawford Grimsley this November and has invited Morrison to fight on that undercard and reiterated his offer to fight Morrison next year. Morrison's manager Tony Holden said a Morrison may meet Foreman, but not in November.

"Prisoner's Cry of 'Rape' Is Heard"

New York Times (10/09/96) P. B1; Lorch, Donatella

Maurice J. Mathie was awaiting trial in a Suffolk County jail in New York when he claims he was raped by the chief of security. While serving 10 to 15 years in a state prison on manslaughter charges, Mathie told his story to legislators, judges, and prisoners rights groups through hundreds of letters. In August, he was awarded \$750,000 by a federal judge. The security guard, Sgt. Roy Fries, is now retired with a full pension, and he is appealing the decision. While rape is widely known to be part of prison life, there are no national statistics on sexual assault in prisons, and most inmates do not speak publicly about it. AIDS is a serious threat in prisons, where condoms are not available and the rate of HIV infection is high. One activist, Stephen Donaldson, a former president of Stop Prisoner Rape, said he was gang-raped while incarcerated and contracted HIV as a result. Donaldson recently died of AIDS.

"No Stone Turns Up"

Washington Post (10/09/96) P. C3; Gerhart, Ann; Groer, Annie

Despite publicity that Sharon Stone would appear in Washington,

D.C., this weekend for events related to the displaying of the AIDS memorial quilt, she will not be involved. Fellow AIDS activist and AmFAR founder Elizabeth Taylor will be present and will lead a candlelight march on Saturday night. Taylor founded the American Foundation for AIDS Research, which Stone serves as fund-raising chairman.

"Seven Office-Mates at a Dying Bank Ask: Who Will Survive?"
Wall Street Journal (10/09/96) P. A1; King, Ralph T., Jr.

With Wells Fargo's recent takeover of First Interstate Bank, seven people at the bank's Los Angeles headquarters' Corporate Insurance Department were left wondering if their jobs would survive the expected layoffs. The office consisted of three vice presidents, three administrative assistants, and their boss. One of the administrative assistants, Mark Clotfelter, is infected with HIV and was worried about retaining his health benefits. Although his position was terminated, Clotfelter later was employed at Wells Fargo's capital-markets operation.

"Digest: Digene and Cytoc"
Washington Post (10/09/96) P. B12

Biotechnology companies Digene, based in Maryland, and Cytoc, of Massachusetts, have agreed to cooperate on the development and sale of tests to detect and monitor cervical cancer and certain sexually transmitted diseases.

"Blood Banks Look at New Draws as Donations Dry Up"
USA Today (10/09/96) P. 4A; Norman-Culp, Sheila

Blood donations in the United States have been dwindling for more than the past decade, due to the fear of AIDS, the aging of reliable donors, and the rise in body-piercing, tattooing, and other short-term factors that prevent willing donors to give blood. In 1982, a Montclair, N.J. blood bank collected 1,816 pints of blood a year. By 1989, donations had declined to 1,447 pints. Last year, only 831 pints were collected at that site. People with new tattoos or body piercings, and those who have spent more than 72 hours in jail, cannot give blood for a year. People who have had surgery, dental work, or any immunization, been diagnosed with gonorrhea, or been exposed to hepatitis, measles, mumps, or chicken pox must also wait. Members of the American Association of Blood Banks will discuss new ways to attract donors at the group's annual meeting this weekend in Orlando, Fla.

"Health: World Health Group Details Progress on 10 [Killer Diseases]"
IPS Wire (10/07/96)

The World Health Organization notes in its latest report on the State of the World's Vaccines and Immunization that significant progress is being made in the development of vaccines against 10 major deadly diseases, comprising HIV/AIDS, malaria, pneumococcal disease, meningococcal meningitis, rotavirus, respiratory syncytial virus, dysentery, enterotoxigenic Escherichia coli, schistosomiasis, and dengue. According to the WHO, the drive for

profit in the developed world's pharmaceutical industries is behind the improvement, even if those companies have Western tourists and soldiers in mind rather than residents of developing countries when pursuing their research. "Ironically," said the report, "a vaccine against pneumococcal pneumonia and meningitis--diseases which kill over a million children a year in developing countries--was developed largely to prevent the incidences of inner ear infections among children in the United States." The report noted, however, that some drug makers have halted vaccine research vital to developing countries--into the virus that causes AIDS for instance--because the need for such products has declined in the industrialized world.

"Genetic Restriction of HIV-1 Infection and Progression to AIDS by a Deletion Allele of the CKR5 Structural Gene"

Science (09/27/96) Vol. 273, No. 5283, P. 1856; Dean, Michael; Carrington, Mary; Winkler, Cheryl; et al.

Recent research has shown that the chemokine receptor CKR5 serves as a critical co-receptor for certain strains of HIV-1. Further studies have suggested that a defect in co-receptors may protect some individuals from HIV-1 infection. Stephen J. O'Brien, of the National Cancer Institute, and colleagues, mapped the location of the CKR5 structural gene and determined the frequency of the defect in the population. From a total of 1,955 patients at high risk for HIV, who were involved in large AIDS studies, 17 people, who had all been exposed to HIV-1 but tested negative for viral antibodies, were found to have two copies of the defective gene. In individuals who had survived with HIV for more than 10 years, the presence of one copy of the defective gene was much more common. An analysis of the frequency of the defect and survival time showed that disease progression is slower in people with one copy of the defective gene than in individuals without the defect.

"Pharmaceutical Industry Sues to Stop Discount Pricing to Clinics"

AIDS Treatment News (10/04/96) No. 256, P. 4; James, John S.

The Pharmaceutical Research and Manufacturers Association (PhRMA), an organization representing drug companies, filed a lawsuit in July to protest a federal law that requires pharmaceutical companies to offer discounts to certain government-supported medical programs for the poor. Most public medical clinics and AIDS-drug assistance programs are eligible for the discount, while Medicaid and other programs large enough to have their own pharmacies are not. The PhMRA lawsuit is an attempt to stop the government-funded programs from contracting with outside pharmacies. This would limit the discount program, and increase the financial hardship of many poor and uninsured patients. Only about 12 of the state ADAP programs currently use the discount, but many are eligible for the program. If successful, the PhRMA lawsuit would prevent most ADAP's from getting the discounted rates. Several AIDS organizations are sponsoring a demonstration on October 11 to protest PhRMA's action.

"The Quilt"

"Antibodies to Human Herpesvirus Type 8 in the General Population and in Kaposi's Sarcoma Patients"

"A New Focus on Primary HIV Infection"

"Some AIDS Cases Defy New Drug 'Cocktails'"

Wall Street Journal (10/10/96) P. B1; Waldholz, Michael

Although new AIDS drug combinations including protease inhibitors have shown promise in reducing levels of HIV and boosting immune cells, doctors say that the therapies do not work for many patients. Perhaps up to 10 percent of patients taking the drug combinations do not have lasting results. Experts are debating which combinations are most effective and when treatment should be initiated. Moreover, because the new drugs were rushed to market, researchers do not fully understand how they work, and patients are essentially testing the therapies in on-going studies.

"But Success in Many Others Is Cutting Hospital Costs"

Wall Street Journal (10/10/96) P. B1; Waldholz, Michael

The use of new AIDS drug therapies seems to be reducing the cost of in-patient health services by AIDS patients, medical officials say. As a result, the government and private agencies could be forced to transfer some of their spending from medical care to drug therapies. Hospitals could increase out-patient services to provide the drugs and monitor their use. The drug therapies can cost \$16,000 a year per patient, compared to an estimated \$24,000 each patient generates in hospital costs. Doctors in hospitals in New York and California note that acute-care is declining more than it ever has in the past 12 years of the epidemic, and most credit the introduction of protease inhibitors for the trend. At St. Vincent's Hospital in Greenwich Village, New York, for example, AIDS-related admissions are down 8 percent this year, and the length of each hospital stay is shorter as well.

"Home Drug Test Kits"

Washington Post (10/10/96) P. A20

A new home testing kit that allows parents to determine if their children are using drugs should not be kept off the market unless it is unsafe or inaccurate, contend the editors of the Washington Post. The editors compare the FDA's concern over the drug test to the agency's reluctance to approve a home HIV test kit--for fear that telephone counseling is not adequate for patients being told they have HIV. The writers argue that "this concern for the

emotional and psychological impact of test results on patients and their families may be admirable. But it is not a reason for denying FDA approval on grounds of safety and efficacy."

"Pact Signed to Sell Policies in \$8.7 Million Transaction"
Wall Street Journal (10/10/96) P. B4

Dignity Partners has made a deal with an undisclosed viatical settlement company to sell 197 policies with a total face value of \$14.2 million for \$8.7 million. All of the policies insure the lives of people with HIV or AIDS. After seeking stockholder approval, Dignity intends to sell all or nearly all of its assets.

"Nationline: AIDS Confidentiality"
USA Today (10/10/96) P. 3A; Bacon, John

A Florida public health worker has been fired for taking computer disks which listed nearly 4,000 HIV-infected individuals to a gay bar and offering to look up names for his friends. William Calvert also used the list to check out his dates.

"AIDS Is a Bi-Partisan Issue"
Washington Times (10/10/96) P. A2; Driscoll, James

The issue of AIDS is being used by Democratic AIDS activists to diminish the Republican record and the accomplishments of the private-sector in an effort to promote President Clinton, AIDS Activist James Driscoll argues in a commentary in the Washington Times. Driscoll, the national AIDS policy advisor to the Log Cabin Republicans, points out that the Republican-controlled Congress reauthorized the Ryan White CARE Act, increasing funding for the program by 30 percent. He also says that the Republicans influenced regulatory reform at the Food and Drug Administration, all for the rapid approval of new AIDS drugs. AIDS activists, meanwhile, credited Clinton with the Ryan White reauthorization and funding increase, Driscoll says, and overlooked the influence of the GOP congress on the FDA. Driscoll urges bipartisan leadership and solutions for AIDS policies, saying that the Republicans deserve credit for their contributions and that the White House should provide more leadership on AIDS.

"Indonesia, Vietnam Face AIDS Pandemic"
Washington Times (10/10/96) P. A16

The number of people infected with HIV in Indonesia and Vietnam could be more than 1 million by the year 2000, increasing the number of infected people in Southeast Asia to more than 2 million, a regional task force reported Wednesday. Factors contributing to the spread of HIV in Indonesia include high-risk

sexual behavior, poverty, widespread sexually transmitted diseases, and increasing population and mobility.

"The Quilt"

Washington Times (10/10/96) P. M3

The NAMES Project AIDS Memorial Quilt will be on display from Friday through Sunday on the Mall in Washington, D.C. In addition, a program called The Quilt will be sponsored by the Smithsonian Associates on Saturday at 3 p.m. The program will feature the co-founders of the NAMES Project, Cleve Jones and Michael Smith, and others who will discuss the quilt's history and the cause.

"Antibodies to Human Herpesvirus Type 8 in the General Population and in Kaposi's Sarcoma Patients"

Lancet (09/28/96) Vol. 348, No. 9031, P. 858; Lennette, Evelyne T.; Blackbourn, David J.; Levy, Jay A.

Human herpesvirus type 8 (HHV-8) has been detected in individuals with all forms of Kaposi's sarcoma (KS), as well as HIV-seropositive individuals with and without KS, and individuals with other diseases, suggesting that the virus may be widely distributed in the population. Previous seroepidemiological studies of the virus have been hindered by unreliable tests. Evelyne T. Lennette, of Virolab in Berkeley, Calif., and colleagues at the University of California, San Francisco, used a immunofluorescence assay to measure HHV-8 seroprevalence in the general population and in KS patients and individuals at risk for HIV infection. They report that all patients with African endemic KS and 96 percent of American patients with AIDS-associated KS tested positive for HHV-8 antibodies. Additionally, 90 percent of American homosexual men with HIV tested positive, compared to 23 percent of HIV-seropositive drug users and 21 percent of HIV seropositive women. In the general U.S. population, about 25 percent of adults and 2 percent to 8 percent of children had antibodies to HHV-8. The authors say the data support the theory that HHV-8 is associated with sexual transmission, but that the rate of infection in children suggests another route of transmission exists as well.

"A New Focus on Primary HIV Infection"

AIDS Clinical Care (09/96) Vol. 8, No. 9, P. 72; Hecht, Frederick

The initial period of HIV infection is thought to be an important time for treatment--to possibly improve a patient's survival, or to eradicate the virus completely. Recent research suggests that HIV production stabilizes after primary infection, and that if replication is high at this point, AIDS is more likely to progress quickly. Early treatment may reduce viral production and slow disease progression. Early treatment may also help

eradicate the virus, if long-term damage to the immune system can be prevented and drug resistant strains do not develop. Martin Markowitz, of the Aaron Diamond AIDS Research Center, reports that, among 9 patients who started treatment during the initial phase of infection, viral load decreased to undetectable levels within 12 weeks. AIDS researcher David Ho estimates that from 30 weeks to 120 weeks are needed for a patient's HIV-infected cells to die out. This suggests that HIV could be eradicated from the body, if HIV replication can be completely stopped and the virus does not infect cells in areas where drugs are ineffective. Patients may have to continue drug therapy to remain disease-free, however. A patient in San Francisco was treated successfully for 80 weeks, but when he stopped treatment, his viral load quickly rebounded.

CDC National AIDS Clearinghouse
Conference Calendar Database

NEW CONFERENCE LISTINGS
October 10, 1996

The Clearinghouse's Conference Calendar Database contains information about upcoming conferences related to HIV and AIDS.

NAC ONLINE users can search this database by selecting "Clearinghouse Databases" from the NAC ONLINE main menu. When asked to enter a database name, specify "CONF" to search the Calendar.

To access the NAC ONLINE BBS, set your communications software to dial (800) 851-7245, and set the options for 8 data bits, N parity, 1 stop bit, full duplex, and complete a new user questionnaire. Only non-profit organizations, government agencies, educational institutions, and health departments are given full access to NAC ONLINE and the NAC databases.

Overnight, 10 new listings were loaded to the Conference Calendar Database. Their records follow:

TITLE: Promotion of FDA-Regulated Products on the Internet
DATE: October 16-17, 1996
LOCATION: Silver Spring, MD
SPONSOR(S): U.S. Department of Health and Human Services; Food and Drug Administration (FDA)
CONTACT: Fay Fink, Office of Policy (HF-11), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, (301) 827-3360, FAX: (301) 594-6777, Internet email: ffink@bangate.fda.gov
EVENT TYPE: Public Meeting
TOPICS: Information sources. Federal government. Medical technology. Databases.

TITLE: Home Care of the HIV Infected Client

DATE: November 6, 1996
LOCATION: Baton Rouge, LA
SPONSOR(S): Delta Region AIDS Education and Training Center (AETC)
CONTACT: Anne Jordan, Delta Region AETC, LSUMC, 136 S. Roman St., New Orleans, LA 70112, (504) 568-3374
EVENT TYPE: Conference
TOPICS: Hospices. Legal issues. Psychological factors. Social factors. Women. Nutrition. Children. Opportunistic infections. Case management.
NOTES: Fee; \$60 (includes lunch).

TITLE: HIV Prevention and Treatment in Louisiana's Prisons and Jails: Third Annual Educational Conference: Peer Leadership and Networking Within the System

DATE: November 12, 1996
LOCATION: Angola, LA
SPONSOR(S): Delta Region AIDS Education and Training Center (AETC); Louisiana State Penitentiary; Louisiana Office of Public Health
CONTACT: Prenellia Thompson, 325 Loyola Ave., Room 614, New Orleans, LA 70112, (504) 568-7525
EVENT TYPE: Conference
TOPICS: Incarcerated persons. Correctional facilities. Peer factors. HIV prevention. Treatment.

TITLE: Ryan White Title III Program Conference; Third Annual
DATE: April 22-25, 1997
LOCATION: Washington, DC
SPONSOR(S): U.S. Department of Health and Human Services, U.S. Public Health Service, Health Resources and Services Administration, Bureau of Primary Health Care, Division of Programs for Special Populations, HIV/Substance Abuse Services Branch
CONTACT: LaVerne Green Frazier, Division of Programs for Special Populations, HIV and Substance Abuse Services Branch, (301) 594-4444
EVENT TYPE: Conference
TOPICS: Federal government. Funding sources.

TITLE: Artificial Self-Assembling Systems for Gene Delivery
DATE: November 17-19, 1996
LOCATION: Coronado, CA
SPONSOR(S): Cambridge Healthtech Institute
CONTACT: Cambridge Healthtech Institute, 1037 Chestnut St., Newton Upper Falls, MA 02164, (617) 630-1300, FAX: (617) 630-1325, Internet email: chi@healthtech.com, World Wide Web home page: <http://www.healthtech.com/conferences/>
EVENT TYPE: Conference
TOPICS: Cancer. Immunology. Virology.
NOTES: Fee: Commercial before October 11, 1996, \$845; Commercial after October 11, 1996, \$895; Academic, government, or hospital-affiliated before October 11, 1996, \$395; Academic, government, or hospital-affiliated before October 11, 1996, \$445.

TITLE: HIV Surrogate Markers: Virological and Immunological Indicators
DATE: November 18-19, 1996
LOCATION: McLean, VA
SPONSOR(S): Cambridge Healthtech Institute
CONTACT: Cambridge Healthtech Institute, 1037 Chestnut St., Newton Upper Falls, MA 02164, (617) 630-1300, FAX: (617) 630-1325, Internet email: chi@healthtech.com, World Wide Web home page: <http://www.healthtech.com/conferences/>
EVENT TYPE: Conference
TOPICS: Treatment. Therapeutic drugs. Immunology.
NOTES: Fee dependent upon attendance of Novel HIV Therapeutic Strategies conference, employer status, and date of registration.

TITLE: Novel HIV Therapeutic Strategies
DATE: November 20-21, 1996
LOCATION: McLean, VA
SPONSOR(S): Cambridge Healthtech Institute
CONTACT: Cambridge Healthtech Institute, 1037 Chestnut St., Newton Upper Falls, MA 02164, (617) 630-1300, FAX: (617) 630-1325, Internet email: chi@healthtech.com, World Wide Web home page: <http://www.healthtech.com/conferences/>
EVENT TYPE: Conference
TOPICS: Treatment. Therapeutic drugs. Immunology.
NOTES: Fee dependent upon attendance of HIV Surrogate Markers conference, employer status, and date of registration.

TITLE: National Conference on Chronic Disease Prevention and Control: Creating Linkages and Partnerships for Healthier Communities; 11th
DATE: December 3-5, 1996
LOCATION: Phoenix, AZ
SPONSOR(S): U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention
CONTACT: Diana Felde, (404) 663-6869
EVENT TYPE: Conference
TOPICS: Case management. Community health. Local government.

TITLE: HIV/AIDS Prevention for Teens: Satellite Video Conference
DATE: December 12, 1996
LOCATION: Washington, DC
SPONSOR(S): United States Conference of Mayors; Massachusetts Corporation for Educational Telecommunications (MCET)
CONTACT: MCET, (800) 556-4376
EVENT TYPE: Satellite Conference
TOPICS: Adolescents. HIV prevention. Education. Schools.

TITLE: Women of Color and HIV Disease

DATE: October 15, 1996
LOCATION: Providence, RI
SPONSOR(S): Brown University AIDS Program
CONTACT: Brown University AIDS Program, Box G-S204 Brown University,
Providence, RI 02912
EVENT TYPE: Lecture
TOPICS: Cultural factors. Women. Minorities.

Information about additional conferences is welcome. Please send
E-Mail to Flynn McLean (through NAC ONLINE, or
fmclean@cdcnac.aspensys.com via the Internet) at the CDC National
AIDS Clearinghouse; include the title, dates, site, sponsoring
agency, contact information, registration fee, and topics to be
discussed at the conference.

"Some AIDS Cases Defy New Drug 'Cocktails'"
Wall Street Journal (10/10/96) P. B1; Waldholz, Michael

Although new AIDS drug combinations including protease inhibitors have shown promise in reducing levels of HIV and boosting immune cells, doctors say that the therapies do not work for many patients. Perhaps up to 10 percent of patients taking the drug combinations do not have lasting results. Experts are debating which combinations are most effective and when treatment should

be initiated. Moreover, because the new drugs were rushed to market, researchers do not fully understand how they work, and patients are essentially testing the therapies in on-going studies.

"But Success in Many Others Is Cutting Hospital Costs"
Wall Street Journal (10/10/96) P. B1; Waldholz, Michael

The use of new AIDS drug therapies seems to be reducing the cost of in-patient health services by AIDS patients, medical officials say. As a result, the government and private agencies could be forced to transfer some of their spending from medical care to drug therapies. Hospitals could increase out-patient services to provide the drugs and monitor their use. The drug therapies can cost \$16,000 a year per patient, compared to an estimated \$24,000 each patient generates in hospital costs. Doctors in hospitals in New York and California note that acute-care is declining more than it ever has in the past 12 years of the epidemic, and most credit the introduction of protease inhibitors for the trend. At St. Vincent's Hospital in Greenwich Village, New York, for example, AIDS-related admissions are down 8 percent this year, and the length of each hospital stay is shorter as well.

"Home Drug Test Kits"
Washington Post (10/10/96) P. A20

A new home testing kit that allows parents to determine if their children are using drugs should not be kept off the market unless it is unsafe or inaccurate, contend the editors of the Washington Post. The editors compare the FDA's concern over the drug test to the agency's reluctance to approve a home HIV test kit--for fear that telephone counseling is not adequate for patients being told they have HIV. The writers argue that "this concern for the emotional and psychological impact of test results on patients and their families may be admirable. But it is not a reason for denying FDA approval on grounds of safety and efficacy."

"Pact Signed to Sell Policies in \$8.7 Million Transaction"
Wall Street Journal (10/10/96) P. B4

Dignity Partners has made a deal with an undisclosed viatical settlement company to sell 197 policies with a total face value of \$14.2 million for \$8.7 million. All of the policies insure the lives of people with HIV or AIDS. After seeking stockholder approval, Dignity intends to sell all or nearly all of its assets.

"Nationline: AIDS Confidentiality"
USA Today (10/10/96) P. 3A; Bacon, John

A Florida public health worker has been fired for taking computer disks which listed nearly 4,000 HIV-infected individuals to a gay bar and offering to look up names for his friends. William Calvert also used the list to check out his dates.

"AIDS Is a Bi-Partisan Issue"

Washington Times (10/10/96) P. A2; Driscoll, James

The issue of AIDS is being used by Democratic AIDS activists to diminish the Republican record and the accomplishments of the private-sector in an effort to promote President Clinton, AIDS Activist James Driscoll argues in a commentary in the Washington Times. Driscoll, the national AIDS policy advisor to the Log Cabin Republicans, points out that the Republican-controlled Congress reauthorized the Ryan White CARE Act, increasing funding for the program by 30 percent. He also says that the Republicans influenced regulatory reform at the Food and Drug Administration, all for the rapid approval of new AIDS drugs. AIDS activists, meanwhile, credited Clinton with the Ryan White reauthorization and funding increase, Driscoll says, and overlooked the influence of the GOP congress on the FDA. Driscoll urges bipartisan leadership and solutions for AIDS policies, saying that the Republicans deserve credit for their contributions and that the White House should provide more leadership on AIDS.

"Indonesia, Vietnam Face AIDS Pandemic"

Washington Times (10/10/96) P. A16

The number of people infected with HIV in Indonesia and Vietnam could be more than 1 million by the year 2000, increasing the number of infected people in Southeast Asia to more than 2 million, a regional task force reported Wednesday. Factors contributing to the spread of HIV in Indonesia include high-risk sexual behavior, poverty, widespread sexually transmitted diseases, and increasing population and mobility.

"The Quilt"

Washington Times (10/10/96) P. M3

The NAMES Project AIDS Memorial Quilt will be on display from Friday through Sunday on the Mall in Washington, D.C. In addition, a program called The Quilt will be sponsored by the Smithsonian Associates on Saturday at 3 p.m. The program will feature the co-founders of the NAMES Project, Cleve Jones and Michael Smith, and others who will discuss the quilt's history and the cause.

"Antibodies to Human Herpesvirus Type 8 in the General Population and in Kaposi's Sarcoma Patients"

Lancet (09/28/96) Vol. 348, No. 9031, P. 858; Lennette, Evelyne

T.; Blackbourn, David J.; Levy, Jay A.

Human herpesvirus type 8 (HHV-8) has been detected in individuals with all forms of Kaposi's sarcoma (KS), as well as HIV-seropositive individuals with and without KS, and individuals with other diseases, suggesting that the virus may be widely distributed in the population. Previous seroepidemiological studies of the virus have been hindered by unreliable tests. Evelyn T. Lennette, of Virolab in Berkeley, Calif., and colleagues at the University of California, San Francisco, used an immunofluorescence assay to measure HHV-8 seroprevalence in the general population and in KS patients and individuals at risk for HIV infection. They report that all patients with African endemic KS and 96 percent of American patients with AIDS-associated KS tested positive for HHV-8 antibodies. Additionally, 90 percent of American homosexual men with HIV tested positive, compared to 23 percent of HIV-seropositive drug users and 21 percent of HIV seropositive women. In the general U.S. population, about 25 percent of adults and 2 percent to 8 percent of children had antibodies to HHV-8. The authors say the data support the theory that HHV-8 is associated with sexual transmission, but that the rate of infection in children suggests another route of transmission exists as well.

"A New Focus on Primary HIV Infection"

AIDS Clinical Care (09/96) Vol. 8, No. 9, P. 72; Hecht, Frederick

The initial period of HIV infection is thought to be an important time for treatment--to possibly improve a patient's survival, or to eradicate the virus completely. Recent research suggests that HIV production stabilizes after primary infection, and that if replication is high at this point, AIDS is more likely to progress quickly. Early treatment may reduce viral production and slow disease progression. Early treatment may also help eradicate the virus, if long-term damage to the immune system can be prevented and drug resistant strains do not develop. Martin Markowitz, of the Aaron Diamond AIDS Research Center, reports that, among 9 patients who started treatment during the initial phase of infection, viral load decreased to undetectable levels within 12 weeks. AIDS researcher David Ho estimates that from 30 weeks to 120 weeks are needed for a patient's HIV-infected cells to die out. This suggests that HIV could be eradicated from the body, if HIV replication can be completely stopped and the virus does not infect cells in areas where drugs are ineffective. Patients may have to continue drug therapy to remain disease-free, however. A patient in San Francisco was treated successfully for 80 weeks, but when he stopped treatment, his viral load quickly rebounded.

TEXT:

Chris --

Thanks again for doing the AIDS Advisory Council subcommittee meeting tomorrow.

This is a small group -- four councilmembers -- who are looking at the bigger picture issues around access to new treatments.

They will have spent the earlier part of the day looking at economic models for how the new treatments might, in the long term, be shown to save costs. They will be meeting with state officials, HRSA's Ryan White staff, and AIDS Drug Assistance Program people to see how those programs may be adapted. My goal in this meeting is to have them emerge saying that there ought to be something we can do to get people into Medicaid earlier and to make Ryan White funds coordinate better with Medicaid services...and then let us work out the details.

No presentation is needed -- I think your role would be to answer questions they may have about flexibility in the Medicaid system and what options there might be. The only "commitment" they would need to hear is a willingness to work with them and with HCFA to identify some solutions to this thorny issue.

Vague enough?

Thanks again.

jeff

Staff - please note:
if anyone needs to fax anything to Carol over the weekend, she will be in Little Rock - staying at her sisters. The best place to fax is to Kinko's on Shakelford Road. Carol uses them often when in town - they are reliable. You will need to ATTN: the fax to CHR and they file it under her name. I think it would be wise to put on an email to Carol to let her know that something is coming. If it's over the weekend (sat/sun or mon), it'd probably be safe to call her too.
Kinko's
(501) 954-1333, fax
(501) 954-1300, phone
* always a good idea to call and confirm that they've received.
RON: Friday - Monday
Martha & Ken Carle, 3 Champagnolle Court, LR, AR
(501) 821-4741
* please use discretion if you really need to call her.

any questions? please call me. THANKS, Jill.

"L.A. Plan Allowing Drug Users in HUD Housing Raises GOP Ire"
Washington Post (10/11/96) P. A3; Schwartz, John; Evans, Judith

A pilot program in Los Angeles that will provide federally funded housing for AIDS patients, but will not evict those who use illicit drugs, even in the residence itself, is being attacked by Congressional Republicans who contend that the program conflicts with Department of Housing and Urban Development (HUD) policies. The general HUD rule is that of "zero tolerance," and tenants are permitted to be thrown out for substance abuse. According to

Fred Eggan, Los Angeles city AIDS coordinator, however, the program is not a "glorified crack house," but it is intended to offer a compassionate way of dealing with the complexities of AIDS patients who are addicted to drugs. The program will not condone drug use, he says, but will provide drug treatment, intensive therapy, and other services. Those who repeatedly abuse drugs, however, will be referred to other substance abuse centers.

"Fla. Employee Fired Over AIDS List"

Philadelphia Inquirer (10/11/96) P. A2; Perez, Evan

William Calvert, a public health worker in Miami, was fired Wednesday for using a confidential list of almost 4,000 people with HIV and AIDS to check the status of potential dates. Calvert allegedly took the computer disks to a gay bar and offered to look up names for his friends. Calvert was turned in anonymously when someone sent copies of the disk and a letter to two Tampa Bay area newspapers and the Pinellas County Health Department. An employee of the Florida Department of Health and Rehabilitative Services since 1988, Calvert admitted to using the database on a laptop at his home, bypassing password protection used to keep the files confidential, but he claims he did nothing wrong. The incident has raised questions about the security of such records, and AIDS patient advocates assert that it is evidence of the risks involved in keeping a list of the names of HIV and AIDS patients.

"Japanese Aide Gains Favor by Fighting the Bureaucrats"

New York Times (10/11/96) P. A12; WuDunn, Sheryl

Naoto Kan, Japan's Health Minister, is popular among many of his countrymen for his role in taking on the Japanese bureaucracy and launching an investigation into the tainted-blood scandal. At least 400 Japanese, the majority of them hemophiliacs, have died of AIDS as a result of having contracted HIV from contaminated blood supplies. Kan's probe into the decade-old affair revealed that health authorities knew about the risk of the blood's contamination for several years before they banned its import. Several senior bureaucrats, pharmaceutical company executives, and a leading AIDS expert have been arrested for their alleged involvement in the scandal.

"New Drugs Boost Results at Biogen, Biochem, Which Are Closely Watched"

Wall Street Journal (10/11/96) P. B5A; Eisinger, Jesse

Several small biotechnology firms performed well in the last quarter, due largely to new products, while some of the bigger biotechnology companies posted mixed results. Biogen, Centocor, and Biochem Pharma produced strong results, driven by the

introduction of new drugs, including Biogen's multiple sclerosis treatment Avonex; Centocor's ReoPro, a platelet blocker; and Biochem Pharma's 3TC, an anti-AIDS treatment that is becoming a key component of the cocktail of medications used to treat AIDS, analysts say. Amgen and Genzyme, two more established firms, also had solid quarters, analysts believe, while Chiron is expected to report weaker third-quarter results.

"AIDS Is Becoming a Black Disease"

Washington Post (10/11/96) P. A25; Raspberry, William

In a commentary in the Washington Post, columnist William Raspberry notes the growing incidence of AIDS and HIV among young African Americans as pointed out by Mario Cooper, a member of the Harvard AIDS Institute who is black, gay, and HIV-positive. Cooper cited statistics from the Centers for Disease Control and Prevention that showed that AIDS has become the No. 1 killer of blacks between the ages of 25 and 44, and he also pointed out that of the 700,000 to 900,000 HIV-positive Americans, 50 percent to 60 percent are non-whites. He further noted that both the medical community and the African American community are acting as though AIDS was still predominantly affecting white gays and drug users. Cooper stated that the disease is hitting blacks and Hispanics the hardest just as evidence is becoming available that prevention works. Because AIDS is portrayed as a disease that can affect homosexuals and heterosexuals, more funding has become available, but Cooper fears that the education necessary for prevention is still not as widely available for the most vulnerable parts of the population. To remedy the situation, he is working on a major conference on Oct. 22 sponsored by the Harvard AIDS Institute, the National Minority AIDS Council, and the Balm in Gilead organization. He hopes that the conference will spur "a forthright acknowledgment by our political and community leaders--including the NAACP and the Urban League--that this disease has the potential to devastate our community in the next decade."

"Drug Combinations Found More Effective Against AIDS"

Reuters (10/09/96); Emery, Gene

Adding either of two AIDS drugs, ddI (didanosine) or ddC (zalcitabine), to AZT therapy is better than the AZT alone for slowing the progression of AIDS, researchers at Harvard Medical school said Wednesday. Led by Dr. Scott Hammer, the researchers reported that the combination therapy slowed disease progression by more than 37 percent. In a related study, scientists at St. John Hospital in Detroit found that the additional drugs offered no benefit for patients whose immune systems were already damaged by HIV. An editorial published with both studies in the New England Journal of Medicine says the studies suggest that all HIV-infected individuals should receive drug therapy, especially after their CD4 cell count falls below 500. The studies also

indicate that a viral load test, which measures the amount of virus in the blood, is the best way to evaluate the progress of HIV infection and to determine how well treatment is working.

"Florida Mother Who Fed HIV Baby Sues Hospital"
Reuters (10/10/96)

A woman who was mistakenly given the child of an HIV-positive woman at a Florida hospital in place of her own to nurse has filed a lawsuit against the hospital. She claims that she has been unable to breast-feed her own daughter for fear that she contracted HIV and could pass it along, and has consequently suffered both fear and anxiety. The incident occurred in mid-April, when a nurse's aide brought the newborn to the woman while she was sleeping. She had already begun nursing before she realized the error, at which time her own baby was brought to her. She was not informed until the next day that the baby she had nursed was born to a woman with HIV, and the hospital suggested at that time that she stop breast-feeding her own child just to be safe. A lawyer for the hospital said the suit was frivolous because neither the mother nor the daughter were injured; but the woman's lawyer noted that the deprivation of a woman's right to nurse created a severe emotional impact.

"Varied Events Expected to Draw a Million Visitors to D.C."
Washington Post (10/11/96) P. B4; Wheeler, Linda

More than 1 million people are expected to visit Washington, D.C., this weekend, as they come to the city to participate in any one of a number of events. Starting today, the AIDS Memorial Quilt will be on display, unfolding its mile-long quilt on the Mall. Along with the quilt will be a nine-member demonstration group that opposes the "homosexual agenda, following the quilt around the country and protesting at its various displays. Two other protest activities, a Latino March and ACT-UP's demonstration will also take place this weekend, potentially drawing thousands of participants alone. Other events taking place in the District this weekend include the Taste of D.C. festival and Whitman-Walker clinic's candlelight march on Saturday to commemorate those who have died of AIDS.

"Pediatric HIV Infection"
Lancet (09/28/96) Vol. 348, No. 9031, P. 863; Scarlatti, Gabriella

About 1.5 million children had been infected with HIV by late 1994, according to the World Health Organization, with over 75 percent of them in sub-Saharan Africa and developing countries in the Americas. Moreover, almost half of all adults with HIV are women of child-bearing age, making the need for programs to prevent mother-to-child transmission especially urgent. The rate

of mother-to-child transmission varies from 13 percent to 42 percent, and is twice as high in Africa as in Europe. Studies of the timing of HIV transmission from mother-to-child have yielded evidence for both early and late in-utero transmission. Evidence has also been reported for postnatal transmission via breastfeeding, but mothers in some developing countries need to breastfeed to protect their children from other endemic diseases. Temporary HIV infection has been observed in newborns with a frequency ranging from 2.7 percent to 6.4 percent. This suggests that infants can clear the virus, which has implications for interrupting transmission and disease progression. While zidovudine therapy is useful to reduce the rate of mother-to-child transmission, a simpler method of treatment is necessary.

"NCF Builds on AIDS Catalog's Success"

DM News (09/30/96) Vol. 18, No. 36, P. 8; Asato, Cathy

The National Catalog Foundation, which has met great success with its National AIDS Awareness Catalog, is planning to publish a National Lesbian and Gay Pride Catalog for the 1996 holiday season. The circulation of the 2-year-old AIDS catalog is now 600,000. The NCF donates 100 percent of its profits to nonprofit organizations. The two catalogs will contain the same items but have different covers and different target audiences. The AIDS catalog is geared to anyone interested in fighting the disease, homosexual or heterosexual. The New-York-based NCF is hoping to raise \$1 million in capital over the next two years and has made its list of 12,000 buyers and requesters available for rent.

"L.A. Plan Allowing Drug Users in HUD Housing Raises GOP Ire"
Washington Post (10/11/96) P. A3; Schwartz, John; Evans, Judith

A pilot program in Los Angeles that will provide federally funded housing for AIDS patients, but will not evict those who use illicit drugs, even in the residence itself, is being attacked by Congressional Republicans who contend that the program conflicts with Department of Housing and Urban Development (HUD) policies. The general HUD rule is that of "zero tolerance," and tenants are permitted to be thrown out for substance abuse. According to Fred Eggen, Los Angeles city AIDS coordinator, however, the program is not a "glorified crack house," but it is intended to offer a compassionate way of dealing with the complexities of AIDS patients who are addicted to drugs. The program will not condone drug use, he says, but will provide drug treatment, intensive therapy, and other services. Those who repeatedly abuse drugs, however, will be referred to other substance abuse centers.

"Fla. Employee Fired Over AIDS List"
Philadelphia Inquirer (10/11/96) P. A2; Perez, Evan

William Calvert, a public health worker in Miami, was fired Wednesday for using a confidential list of almost 4,000 people with HIV and AIDS to check the status of potential dates. Calvert allegedly took the computer disks to a gay bar and offered to look up names for his friends. Calvert was turned in anonymously when someone sent copies of the disk and a letter to two Tampa Bay area newspapers and the Pinellas County Health Department. An employee of the Florida Department of Health and Rehabilitative Services since 1988, Calvert admitted to using the database on a laptop at his home, bypassing password protection used to keep the files confidential, but he claims he did nothing wrong. The incident has raised questions about the security of such records, and AIDS patient advocates assert that it is evidence of the risks involved in keeping a list of the names of HIV and AIDS patients.

"Japanese Aide Gains Favor by Fighting the Bureaucrats"
New York Times (10/11/96) P. A12; WuDunn, Sheryl

Naoto Kan, Japan's Health Minister, is popular among many of his countrymen for his role in taking on the Japanese bureaucracy and

launching an investigation into the tainted-blood scandal. At least 400 Japanese, the majority of them hemophiliacs, have died of AIDS as a result of having contracted HIV from contaminated blood supplies. Kan's probe into the decade-old affair revealed that health authorities knew about the risk of the blood's contamination for several years before they banned its import. Several senior bureaucrats, pharmaceutical company executives, and a leading AIDS expert have been arrested for their alleged involvement in the scandal.

"New Drugs Boost Results at Biogen, Biochem, Which Are Closely Watched"

Wall Street Journal (10/11/96) P. B5A; Eisinger, Jesse

Several small biotechnology firms performed well in the last quarter, due largely to new products, while some of the bigger biotechnology companies posted mixed results. Biogen, Centocor, and Biochem Pharma produced strong results, driven by the introduction of new drugs, including Biogen's multiple sclerosis treatment Avonex; Centocor's ReoPro, a platelet blocker; and Biochem Pharma's 3TC, an anti-AIDS treatment that is becoming a key component of the cocktail of medications used to treat AIDS, analysts say. Amgen and Genzyme, two more established firms, also had solid quarters, analysts believe, while Chiron is expected to report weaker third-quarter results.

"AIDS Is Becoming a Black Disease"

Washington Post (10/11/96) P. A25; Raspberry, William

In a commentary in the Washington Post, columnist William Raspberry notes the growing incidence of AIDS and HIV among young African Americans as pointed out by Mario Cooper, a member of the Harvard AIDS Institute who is black, gay, and HIV-positive. Cooper cited statistics from the Centers for Disease Control and Prevention that showed that AIDS has become the No. 1 killer of blacks between the ages of 25 and 44, and he also pointed out that of the 700,000 to 900,000 HIV-positive Americans, 50 percent to 60 percent are non-whites. He further noted that both the medical community and the African American community are acting as though AIDS was still predominantly affecting white gays and drug users. Cooper stated that the disease is hitting blacks and Hispanics the hardest just as evidence is becoming available that prevention works. Because AIDS is portrayed as a disease that can affect homosexuals and heterosexuals, more funding has become available, but Cooper fears that the education necessary for prevention is still not as widely available for the most vulnerable parts of the population. To remedy the situation, he is working on a major conference on Oct. 22 sponsored by the Harvard AIDS Institute, the National Minority AIDS Council, and the Balm in Gilead organization. He hopes that the conference will spur "a forthright acknowledgment by our political and community leaders--including the NAACP and the Urban League--that

this disease has the potential to devastate our community in the next decade."

"Drug Combinations Found More Effective Against AIDS"
Reuters (10/09/96); Emery, Gene

Adding either of two AIDS drugs, ddI (didanosine) or ddC (zalcitabine), to AZT therapy is better than the AZT alone for slowing the progression of AIDS, researchers at Harvard Medical school said Wednesday. Led by Dr. Scott Hammer, the researchers reported that the combination therapy slowed disease progression by more than 37 percent. In a related study, scientists at St. John Hospital in Detroit found that the additional drugs offered no benefit for patients whose immune systems were already damaged by HIV. An editorial published with both studies in the New England Journal of Medicine says the studies suggest that all HIV-infected individuals should receive drug therapy, especially after their CD4 cell count falls below 500. The studies also indicate that a viral load test, which measures the amount of virus in the blood, is the best way to evaluate the progress of HIV infection and to determine how well treatment is working.

"Florida Mother Who Fed HIV Baby Sues Hospital"
Reuters (10/10/96)

A woman who was mistakenly given the child of an HIV-positive woman at a Florida hospital in place of her own to nurse has filed a lawsuit against the hospital. She claims that she has been unable to breast-feed her own daughter for fear that she contracted HIV and could pass it along, and has consequently suffered both fear and anxiety. The incident occurred in mid-April, when a nurse's aide brought the newborn to the woman while she was sleeping. She had already begun nursing before she realized the error, at which time her own baby was brought to her. She was not informed until the next day that the baby she had nursed was born to a woman with HIV, and the hospital suggested at that time that she stop breast-feeding her own child just to be safe. A lawyer for the hospital said the suit was frivolous because neither the mother nor the daughter were injured; but the woman's lawyer noted that the deprivation of a woman's right to nurse created a severe emotional impact.

"Varied Events Expected to Draw a Million Visitors to D.C."
Washington Post (10/11/96) P. B4; Wheeler, Linda

More than 1 million people are expected to visit Washington, D.C., this weekend, as they come to the city to participate in any one of a number of events. Starting today, the AIDS Memorial Quilt will be on display, unfolding its mile-long quilt on the Mall. Along with the quilt will be a nine-member demonstration group that opposes the "homosexual agenda, following the quilt

around the country and protesting at its various displays. Two other protest activities, a Latino March and ACT-UP's demonstration will also take place this weekend, potentially drawing thousands of participants alone. Other events taking place in the District this weekend include the Taste of D.C. festival and Whitman-Walker clinic's candlelight march on Saturday to commemorate those who have died of AIDS.

"Pediatric HIV Infection"

Lancet (09/28/96) Vol. 348, No. 9031, P. 863; Scarlatti, Gabriella

About 1.5 million children had been infected with HIV by late 1994, according to the World Health Organization, with over 75 percent of them in sub-Saharan Africa and developing countries in the Americas. Moreover, almost half of all adults with HIV are women of child-bearing age, making the need for programs to prevent mother-to-child transmission especially urgent. The rate of mother-to-child transmission varies from 13 percent to 42 percent, and is twice as high in Africa as in Europe. Studies of the timing of HIV transmission from mother-to-child have yielded evidence for both early and late in-utero transmission. Evidence has also been reported for postnatal transmission via breastfeeding, but mothers in some developing countries need to breastfeed to protect their children from other endemic diseases. Temporary HIV infection has been observed in newborns with a frequency ranging from 2.7 percent to 6.4 percent. This suggests that infants can clear the virus, which has implications for interrupting transmission and disease progression. While zidovudine therapy is useful to reduce the rate of mother-to-child transmission, a simpler method of treatment is necessary.

"NCF Builds on AIDS Catalog's Success"

DM News (09/30/96) Vol. 18, No. 36, P. 8; Asato, Cathy

The National Catalog Foundation, which has met great success with its National AIDS Awareness Catalog, is planning to publish a National Lesbian and Gay Pride Catalog for the 1996 holiday season. The circulation of the 2-year-old AIDS catalog is now 600,000. The NCF donates 100 percent of its profits to nonprofit organizations. The two catalogs will contain the same items but have different covers and different target audiences. TEXT:

FYI: Recently in a conversation with Ralph Smith of the Annie E. Casey Foundation I was talking about the Grandmothers' project and he said their Foundation is doing some work on kids with AIDS and the issue of children whose caretakers have AIDS; he said you are welcome to call him to discuss it if the work you all have done did not include any contact with Casey. Jill has the 1-800 number for Casey on rolodex.

I am sorry I was not in DC for any of the quilt activities...I have watched closely on tv to all the terrific coverage and of course recognized a lot of our friends in ACT-UP with the coverage of the protest in front of White House. I know you all felt better about facing everyone with the recent terrific budget increase.

"Police Break Up AIDS Protest at White House"

Washington Post (10/14/96) P. B3

More than 300 AIDS activists took part in a demonstration at the White House Sunday to protest President Clinton's AIDS policies and to voice demands for guaranteed access to AIDS treatments, increased AIDS research, and federally funded needle exchange programs. The event, called a political funeral, was organized by ACT UP. The protesters, who marched from the Mall where the AIDS Memorial Quilt was on display, threw funeral urns over the wrought iron fence at the White House.

"A New Danger in the Age of AIDS"

Washington Post (10/14/96) P. A4; Tippit, Sarah

The disclosure of confidential AIDS records by a Florida

health worker has focused attention on new threats to the security of medical records in the information age. As computer networks, insurance databases, and computer hackers proliferate, concerns about maintaining such confidentiality have been raised. The official, William Calvert III, who was an investigator with the Florida Department of Health and Rehabilitative Services, is accused of using a list of local HIV-positive residents to screen potential dates for himself and his friends. Calvert was fired last Wednesday. Investigators are now trying to determine if the list was published on the Internet or whether there is a network of AIDS information brokers.

"In Age of Acupuncture and Nose Piercing, Who Can Give Blood?"
Wall Street Journal (10/14/96) P. B1; Chase, Marilyn

When the threat of AIDS appeared in the 1980s, the screening process for blood donors became more probing and specific. Potential blood donors are now screened for disease risks based on medical and lifestyle information. A person who has had malaria must wait at least three years to give blood, for example, and a person with a history of cancer is rejected. Donors are also rejected if they have ever injected street drugs or steroids. Practices like acupuncture, tattooing, and ear or body piercing disqualify donors for a year. The use of certain drugs also make donors ineligible for shorter time periods. The risk of contracting HIV from a blood transfusion has been reduced to as little as two in one million.

"When AIDS Hits Home"

Washington Post (10/12/96) P. A1; Goldstein, Amy

AIDS, more than any other disease, has become a part of American society, evidenced by the numerous community groups, fund-raising efforts, and corporate sponsorships focused on AIDS. The wide acceptance of the disease in the 1990s is especially surprising because it was highly stigmatized in the 1980s. The portrayal of AIDS as universal has fueled the integration of the disease into society. However, while AIDS has become a popular social issue, the disease has spread to the margins of society. Moreover, AIDS has been increasingly linked to intravenous drug use, to poverty, and to minorities.

"Clinton, in Detailed Interview, Calls His Health 'Very Good'"

New York Times (10/14/96) P. A1; Altman, Lawrence K.

President Clinton reports, in his first interview about his health, that he has never had a serious illness and that he would make such an illness public if he developed one while in the White House. As part of an exam for a life insurance policy, Clinton tested negative for HIV in 1990. He has not been re-tested. Clinton said he was "not in any kind of at-risk category--there is nothing I've done that would indicate that I could have become positive" for HIV. Clinton will be tested for HIV again in the future, according to White House physician Dr. E. Connie Mariano.

"Obituary: Janice A. Burns, 33, Who Sought a Wider Understanding

of AIDS"

New York Times (10/14/96) P. A15; Saxon, Wolfgang

Janice A. Burns, who worked to educate the public about AIDS through her writing and speaking, died of the disease on Sept. 28 in New York. Burns wrote "Sarah's Song" about her life with her husband William Burns, and their struggle to live with AIDS. She was active in several AIDS organizations and has spoken to thousands of high school students about her experiences.

"AIDS Program Criticized"

Houston Chronicle (10/11/96) P. 11A

A new housing program for AIDS patients in Los Angeles has come under attack by Congressional Republicans. The program will use federal funds for the housing but will not evict people for using illegal drugs, even if the drugs are used in the facility. Critics argue that a government policy requires that any resident of public or assisted housing be evicted for drug use.

"Marijuana Club's Founder Arrested"

Washington Post (10/12/96) P. A15

The founder of San Francisco's Cannabis Buyers Club, which provided marijuana to people with AIDS, cancer, and other terminal diseases, was arrested Friday on charges of selling the drug to dealers. Dennis Peron, also the leader of a ballot measure to legalize marijuana for medical use, is accused of conspiracy, as well as possession and sale of marijuana. California's Attorney General Dan Lungren, who led a raid on the club in August, said five other people allegedly involved in the club are being sought on similar charges.

"Congress: Biomedical Research Wins Big"

Science (10/04/96) Vol. 274, No. 5284, P. 27; Marshall, Eliot; Lawler, Andrew

The 1997 appropriation bill recently passed by Congress includes a 6.9 percent funding increase for the National Institutes of Health, raising the research center's budget to \$12.7 billion. The total is some \$330 million greater than the spending proposals offered by either the Clinton administration or the Senate. Rep. John Porter (R-Ill.), chair of the House appropriations subcommittee responsible for NIH's budget, wanted to take AIDS spending authority away from the NIH's Office of AIDS Research (OAR). The new bill gives OAR much of the control of AIDS funding, as well as an "estimated" budget of \$1.5 billion. The directors of OAR and NIH share the authority to transfer up to 3 percent of this money from one institute to another.

"The New Tuskegee Experiment"

Village Voice (10/01/96) Vol. 41, No. 40, P. 8; Hentoff, Nat

A new law in the state of New York, sponsored by Assemblywoman Nettie Mayersohn, requires that mothers be informed if their newborns test positive for HIV. Mayersohn pushed for the legislation for years, battling opponents that included the Gay Men's Health Crisis, the ACLU, and some feminists and medical

societies. Jim Dwyer, a columnist for the New York Daily News, is credited for his investigative reporting, then for Newsday, on the need for mandatory testing and notification. He showed that the opposition's argument--that pregnant women could be persuaded to seek their test results voluntarily--was inadequate. Additionally, the claim that mandatory testing would keep some women from seeking health care was also countered by Dwyer, who interviewed minority women who said mandatory testing would have saved their children's lives. In an interview with Dwyer, Dr. Arthur Ammann, a specialist in pediatric AIDS, compared the anonymous testing of infants in New York to the Tuskegee experiment, in which black men with syphilis were observed, but not treated, in a government study. Amman also noted that, in 1983, the community agreed that anyone who had contracted HIV through a blood transfusion had a right to be informed. He argued that infants should have the same rights.

Chris --

And now I am embarrassed -- I should have thanked you before you asked me how it went.

It was excellent -- you did what was needed...and I think they have reached a point that will be valuable -- wanting to ask some tough questions about how we set priorities; and getting some good ideas about how we can measure the cost-effectiveness of earlier access to care -- with closer linkages between some of the Ryan White programs and Medicaid (and not necessarily -- though I am not giving up on this yet -- going the waiver route).

Thanks, as always.

Also -- as a follow up to the last part of our meeting with Carol...I have proposed to her moving over to DPC with a broad public health portfolio...there could be some fun things to do (e.g., from making sure that the public health agencies talk to one another in the absence of an OASH to NIH reauthorization to how public health contends with managed care and doesn't get lost in Medicaid reform). What do you think?

jeff

Jeffrey Levi is Deputy Director of the White House Office of National AIDS Policy, which is part of the Domestic Policy Council. He has been in that post two years. The Office of National AIDS Policy is responsible for coordinating the federal government's response to the HIV epidemic. Levi has been involved in AIDS policy issues since the beginning of the epidemic. From 1990 to 1994 he was director of government affairs and director of public policy and program development for the AIDS Action Council and AIDS Action Foundation. AIDS Action is the only national organization devoted solely to AIDS public policy advocacy. Jeff has worked on AIDS issues since 1983, when he joined the staff of the National Gay and Lesbian Task Force as its Washington representative. He went on to serve three years as executive director.

FYI: Recently in a conversation with Ralph Smith of the Annie E. Casey Foundation I was talking about the Grandmothers' project and he said their Foundation is doing some work on kids with AIDS and the issue of children whose caretakers have AIDS; he said you are welcome to call him to discuss it if the work you all have done did not include any contact with Casey. Jill has the 1-800 number for Casey on rolodex.

I am sorry I was not in DC for any of the quilt activities...I have watched closely on tv to all the terrific coverage and of course recognized a lot of our friends in ACT-UP with the coverage of the protest in front of White House. I know you all felt better about facing everyone with the recent terrific budget increase.

Using Technology to Create Opportunity and
Build an American Community

October 10, 1996

Using technology to improve education, health and family life.

Today, President Clinton and Vice President Gore travel to Tennessee, where they will highlight the role technology can play in improving all of our lives, and announce a number of initiatives that will expand that opportunity to more Americans.

Building the Internet infrastructure. Today, President Clinton will announce an initiative to improve and expand the Internet, committing \$100 million for fiscal year 1998, every dime of which is paid for in his balanced budget. This money will help expand the use of fiber-optic cable, improve real-time sound and video transmission, let rural doctors tap into big city hospital computers, and allow Americans to take any class, any time, anywhere.

Expanding educational opportunity. Earlier this year, President Clinton announced a Technology Literacy Challenge fund of \$2 billion to help states, localities and private sector companies work to ensure that our schools provide all our children with a greater opportunity to learn the skills they need to thrive in the next century. America is answering that challenge:

* Private/Public partnerships: Today, President Clinton announced that CEO's from some of our leading communications companies have taken the lead to help raise private sector contributions that will be matched by the President's Technology Literacy Fund, to help connect every single library and classroom in America to the Information Superhighway by the year 2000.

* Free access for every K-12 school: Today, President Clinton called on the FCC to provide schools and libraries with an

E-Rate -- an education rate -- to tap into the internet, providing free basic connections to every K-12 classroom and library in the country.

* Thousands of schools are already wired. In the last year, businesses, communities, state and local governments and schools have come together to wire tens of thousands of schools across the country.

Helping balance the responsibilities of work and family. President Clinton is proud of the success of the Family and Medical Leave Law, which has helped 12 million working Americans take time off to care for newborn children or a sick parent without fear of losing their jobs. The President has also worked to encourage businesses and their employees who are parents to use technology so that they can work from home.

* The minimum wage bill the President signed last month also will help companies let their employees telecommute. The bill increases the amount of capital a small business can expense, and President Clinton is challenging them to invest in computers and other equipment that makes telecommuting possible.

Improving health care. President Clinton is committed to helping

every American be as healthy and strong as possible. We are on the right track, and President Clinton is working to keep us there:

* Continued support for the National Institute of Health is helping to fight breast cancer, AIDS, and provide the first-ever treatment for strokes;

* President Clinton has signed legislation that creates a new telemedicine initiative that helps rural doctors, and supports biotechnology advances such as the Human Genome Project.

TEXT:

Donna Shalala (sp?) was here yesterday, and a small group of us met with her. I told her about the leland opening and her response was "That will create a lot of jobs!" That summerizes the theme of the next hour with her. "Working poor families" must have come out of her mouth a dozen times. I guess that is the message tract at this point in the campaign.

All went well, however. I am now going on vacation....

:-) Bob

TEXT:

PRINTER FONT 12_POINT_ROMAN

I want to let you know that I am most interested in pursuing our conversation of a continued role working with you in the Administration -- should all turn out well next month. My two years here have been a wonderful experience; working with you has helped make it so. My desire to move on comes from a readiness for a different role, one that will let me focus more on policy and to move beyond HIV, taking some of the lessons I've learned about HIV and applying them to some different and/or larger public health questions.

What I'd be interested in exploring is a position on the DPC staff that addresses public health policy. I think there might be considerable benefit to having a point person responsible for assuring an integrated approach throughout the government to public health questions. This is especially important with the elimination of the Office of the Assistant Secretary for Health at HHS, though I believe that the scope of DPC's role in public health could cover issues beyond the purview of PHS agencies. I believe that it is equally important to assure that there is a public health voice in the internal deliberations on various issues -- including the work of the new health care advisory commission and in the Medicaid reform/waiver discussions -- as well as examining more closely what VA and DoD are doing on public health issues.

Some examples of issue areas I have in mind are:

- * Public health coordination/oversight: The dismantling of the Office of the Assistant Secretary for Health at HHS has left a huge gap in coordination of public health programs across PHS agencies and among the departments. Effective communication and coordination are worse in this regard in the HIV arena than they were a few years ago; my guess is the same is the case in other policy areas. Some of these problems could be avoided or addressed with DPC involvement.

- * Simplifying funding streams for community organizations/providers in the field: This comes from the HIV experience of trying to get HIV prevention and treatment services integrated with substance abuse prevention and treatment services -- which could require an organization to respond to as many as eight different RFPs to provide the comprehensive care that the government is saying ought to be provided. My assumption is that, if it's a problem in HIV, it's also probably a problem

elsewhere, especially for smaller, rural communities. This would be worth looking at systematically throughout various aspects of public health programming.

* Public health and Medicaid reform: As Medicaid continues to be reformed, it will be important to have a voice participating in

the discussions that remains focused on the public health implications of reforms. (An example of simple ways to integrate public health concerns is the recent addition to HEDUS of provision of pneumocystis pneumonia prophylaxis for people with HIV.) I know others have responsibility for Medicaid, and I hope this would be seen as providing some assistance in their efforts.

* Public health and managed care: The public health community seems simultaneously to be trying to fight managed care and figure out survival mechanisms in the context of managed care. There does not seem to be a consistent approach to this across agencies; it is necessary to make sure that the public health community adapts to managed care while retaining its adherence to sound public health principles.

* Big ticket items on the horizon: NIH reauthorization will be up next year -- this is an opportunity to assure a coordinated Administration approach to some of the difficult issues likely to arise on that bill as well as to integrate more of a public health sensitivity in NIH's efforts. It seems we should not be reauthorizing a \$12 billion agency without some significant White House input. (As an example of what I have in mind: in addition to the usual controversies over fetal tissue and embryo research, there may well be some legislative steps needed to assure that NIH and its grantees adapt appropriately to a managed care environment that assures continued support of clinical research or addresses the need for better coordination of other major biomedical research activities at DoD, VA, HCFA, and other PHS agencies.)

I should mention something about HIV. I have put so much of my life into this issue, that it may be hard to let go -- but that is, for the most part, what I want to do. I would not in any way want to construct this new position in such a way that it undercuts the new leadership in the AIDS office. I would be happy to be the institutional memory for a while, to advise the new director -- but I would not want any formal responsibilities for the AIDS office.

There are two projects, however, that -- with the concurrence of the new director -- I would want to see move forward. The first is the Medicaid project we discussed. I think it is incredibly important -- not just for people living with HIV, but also in demonstrating more creative ways of using the system to gain access to appropriate care for people with disabilities or at risk for disabilities.

The second is a "reinventing HIV counseling and testing" project that I have finally gotten CDC to start, which is a reexamination of how we do HIV testing in light of new treatments and new

testing technologies -- involving the relevant government agencies, community groups, and outside experts.

I would love to discuss with you your reactions to these ideas.
Just the chance to think about alternatives and how I might have
a chance to move policy in these areas has gotten lots of
internal wheels turning.
I hope we can work something out. I'd be happy to discuss this
further at your convenience -- as well as any ideas you might
have brewing.
Thanks again.

TEXT:

Thanks for your e-mail. I will ask Jane Sanville to call the Casey Foundation.

The quilt weekend was a success in so many ways. The weather, of course. But the fabulous four all visited the quilt and I heard so much about it all weekend. The President was applauded everywhere I went. I was so very happy about that! It was a sad weekend for many, but one that gave people an opportunity to share their grief with the thousands of others who have lost a friend or lover or family member. The Candlelight March was spectacular and Elizabeth Taylor did not say anything about the President. (Her most recent speeches had contained disparaging remarks about him.) Cleve Jones gave a political speech -- beginning by announcing that he never thought he would utter the following 4 words: "Thank you Mr. President," then went on to repeat it several times while the crowd applauded wildly.

"Culture, et cetera: Sex Club Mission"

"Animal Research Key to Progress"

"China Sounds Alarm on AIDS"

"The Changing Epidemiology of Acquired Drug-Resistant Tuberculosis in San Francisco, USA"

"HIV Blocked by Chemokine Antagonist"

"At-Home Kits Test Medical Policies"

Richmond Times-Dispatch (10/15/96) P. A1

As the number of Americans using home health test kits increases, questions are being raised about the lack of government guidelines for such tests. Americans spent more than \$1 billion on home tests in 1995, a 13 percent increase over the previous year. The Food and Drug Administration only approved the first home HIV test this year after six years of debate and only after phone counseling was added as a requirement. Although the agency regulates such tests for effectiveness, it has not established a policy on how to determine whether a test is appropriate for society. The FDA has recently been forced to deal with the question again after an Atlanta mother developed and marketed a home drug-use detection kit to other parents. The

FDA said she violated federal law, but the product has been allowed to stay on the market while the case is under further consideration.

"Shoo Flu, Don't Bother Me"

Washington Post--Health (10/15/96) P. 7; Squires, Sally

The Centers for Disease Control and Prevention (CDC) predicts that this year's influenza season is likely to be a bad one, with the advent of at least one strain of flu virus that has been linked to severe symptoms. The CDC therefore recommends that people in high-risk groups--including the elderly; people infected with HIV; those receiving cancer therapy; and children and adults with chronic health conditions--become vaccinated against the virus. This year's flu vaccine contains three strains of killed virus, as have vaccines in past years, but researchers are also working on several ways to improve the vaccine, including using live influenza virus administered by a nasal spray, and developing new ways of streamlining production of vaccines so the protection can be more widely distributed. High-risk people who cannot be vaccinated, such as those with allergies to eggs, may be protected against influenza A varieties with antiviral drugs such as amantadine and rimantadine.

"Condoms a Safer Sell in South Korea"

Chicago Tribune (10/14/96) P. 4-5

Since talking about sex in public is taboo in South Korea, stores are therefore reluctant to display condoms and consumers are embarrassed to be seen buying them. As an alternative, entrepreneur Paek Myong-ju has packaged condoms in trinkets including cigar boxes, compact discs, wedding bouquets, and walnuts. The camouflaged condoms are sold in convenience stores, department stores, and through mail order. Paek, who sold 100,000 walnut condoms alone in January, reports that most of his customers are female.

"South Africa Slow to Battle Spread of Tuberculosis"

New York Times (10/13/96) P. 12; McNeil, Donald Jr.

Although the World Health Organization has called South Africa's tuberculosis (TB) problem the worst in the world, the country's government has been slow to respond to the emergency. South Africa has the highest reported infection rate--about 350 cases per 100,000 people--and an increasing rate of drug-resistant TB, which kills 54 percent of patients it infects. The problem is partly attributed to a rise in drug use and the spread of HIV, which can increase susceptibility to TB. Moreover, a government plan to train nurses in the latest treatment methods, establish a case register, and build 200 mini-laboratories to facilitate rapid diagnosis is facing bureaucratic barriers.

"Judge Finds D.C. Medicaid in Violation"

Washington Post (10/12/96) P. A1; Locy, Toni

A federal judge has ruled that Washington, D.C.'s Medicaid program is failing to reach thousands of poor residents--and is

threatening their health and violating their constitutional rights. U. S. District Judge Gladys Kessler said the program's problems range from failing to process Medicaid applications on time to inefficiently assigning doctors to recipients. Kessler pointed to examples of patients who are suffering as a result, including Karl Von Faust, who has AIDS and had to enroll in drug trials to pay for his medicine. The judge set a hearing date in November at which time she will decide how to remedy the program's problems.

"Culture, et cetera: Sex Club Mission"

Washington Times (10/15/96) P. A2

A safe-sex club has opened in San Francisco, according to an article in the October 7 issue of U.S. News & World Report. Eros, the Center for Safe Sex, provides free condoms and other safe-sex supplies, offers a massage studio and sauna, as well as safe-sex lessons. Gay sex clubs have returned, and city officials and AIDS activists cannot decide if they are a public health threat or benefit. Some activists say the clubs will contribute to the increased spread of HIV in the gay community, but others hope they will offer HIV education for those most at-risk.

"Animal Research Key to Progress"

USA Today (10/15/96) P. 14A; Paris, Susan E.

The award of the Nobel Prize in medicine for work in immunology serves as a reminder that animals are vital to medical progress, notes Susan E. Paris, president of Americans for Medical Progress, in a letter to the editor in USA Today. Paris points out that the research that won the prize involved the study of laboratory mice and resulted in the knowledge of how the immune system targets viruses. She argues that animal rights activists would have liked to derail such research 20 years ago, and that continued efforts by activists could deny progress against AIDS, cancer, and other diseases.

"China Sounds Alarm on AIDS"

United Press International (10/15/96)

Chinese health officials report that AIDS is spreading rapidly throughout the country, adding that government AIDS campaigns were not effective. The State AIDS Supervision Station said AIDS awareness was low among members of high-risk groups and that most HIV infections are attributed to intravenous drug use. By the end of 1995, China had 3,341 documented HIV cases. In that year, 1,567 cases were added, compared to 502 new cases in 1994. The Ministry of Health estimates that close to 10,000 people are infected with HIV, and independent activists and experts say the number is closer to 100,000. The government has appropriated \$1.8 billion for national AIDS work this year.

"The Changing Epidemiology of Acquired Drug-Resistant Tuberculosis in San Francisco, USA"

Lancet (10/05/96) Vol. 348, No. 9032, P. 928; Bradford, Williamson Z.; Martin, Jeffrey N.; Reingold, Arthur L.

The emergence of drug-resistant *Mycobacterium tuberculosis* in recent years has created a serious global health threat. To effectively control tuberculosis (TB) and determine what the best treatment options are, the factors that contribute to drug-resistance must be defined. Dr. Peter M. Small, of Stanford Medical School, and colleagues studied the trend of drug-resistance in San Francisco, a city that has had an effective TB control program. The researchers considered all reported TB cases in San Francisco between 1985 and 1994. They found evidence that 14 patients who were infected with susceptible *M. tuberculosis* later developed drug-resistance. Among these cases, two occurred between 1985 and 1989, and the remainder were reported between 1990 and 1994. Acquired drug-resistance was associated with AIDS, non-compliance with therapy, and gastrointestinal symptoms. The authors conclude that the increasing prevalence of HIV/TB co-infection can be attributed to the increase in acquired drug resistance in San Francisco. They also suggest that conventional TB control measures may not be adequate in communities with high rates of HIV infection.

"HIV Blocked by Chemokine Antagonist"

Nature (10/03/96) Vol. 383, No. 6599, P. 400; Arenzana-Seisdedos, Fernando; Virelizier, Jean-Louis; Rousset, Dominique; et al.

Recent research has shown that HIV-1 depends on chemokine receptors to act as cell surface co-receptors to enter and infect cells. Scientists from the Pasteur Institute, the University of British Columbia, and the University of Bern report that a modified version of the chemokine RANTES can block HIV-1 without prompting the adverse effects the original compound causes. The findings suggest that "receptor signaling and cell activation is probably not required for the anti-HIV effect of chemokines," and that therapeutic agents could be developed as a result, the authors conclude.

PRINTER FONT 12_POINT_COURIER

I. BACKGROUND

Following the White House Conference on HIV and AIDS, the Presidential Advisory Council on HIV and AIDS recommended a more systematic series of regional briefings to continue the dialogue of the Conference at the local level. The Office of National AIDS Policy (ONAP), working with the National AIDS Fund and Funder's Concerned About AIDS, were instrumental in organizing these briefings.

The AIDS Program Office of the Health Resources and Service Administration (HRSA) is active in these regional briefings and has been present in Ft. Lauderdale and Miami, Florida; San Francisco and Los Angeles, California; Chicago, Illinois; Cleveland, Ohio; and Charlotte, North Carolina.

The goals of these regional briefings were:
to communicate between the AIDS community organizations and officials of the federal government, especially the AIDS program office at HRSA;
to enhance the relationship between the AIDS program office at HRSA and the Presidential Advisory Council on HIV and AIDS as a means of additional communication with the AIDS community; and
to strengthen the relationship between other public/private and public/public sectors involved in AIDS program support.
As an additional follow

-up to these regional briefings, the AIDS Program Office of the Health Resources and Service Administration (HRSA) can provide technical assistance to these communities.

II. SCOPE OF WORK

The contractor will assist the Office of the Associate Administrator for AIDS in the following ways:
Coordinate between the AIDS Program Office at HRSA and the Office of National AIDS Policy on conducting HIV and AIDS technical assistance to needed organizations;
Strengthen relationship with AIDS community organizations and the AIDS Program Office at HRSA;
Evaluate and follow

-up on AIDS community organizations involved

in the regional briefings regarding technical assistance;
Evaluate and follow

-up on AIDS community organizations involved
in the regional briefings and their impact on AIDS policy,
funding, etc.;

Act as Liaison between the AIDS Program Office at HRSA and the
Office of National AIDS Policy, the Presidential Advisory Council
on HIV and AIDS and the HRSA AIDS Advisory Committee and other
officials, of the federal government as well as other
public/private organizations involved in AIDS program support.

III. PERIOD OF PERFORMANCE

The period of performance for the contractor will be from, on, or
before November 4, 1996 through December 31, 1996.

IV. PROJECT OFFICER

Shelley Gordon

Deputy Director, AIDS Program Office

Telephone: (301) 443

-4558

Fax: (301) 443

-1551

V. JUSTIFICATION FOR NON

-COMPETITIVE PROCUREMENT

Daniel Montoya has worked on previous Office of National AIDS
Policy coordination efforts with regional briefings that include
AIDS organizations in cities in that include Dallas/Fort Worth,
Texas; New York, New York; Newark, New Jersey; Miami/Ft.
Lauderdale, Florida; San Diego, Los Angeles, San Francisco,
California; Chicago, Illinois; Cleveland, Ohio; and Charlotte,
North Carolina.

Montoya has been actively involved in HIV and AIDS issues that
include interaction between federal, state and local public and
private agencies and organizations as well as close work in AIDS
communities. As a person living with HIV, Montoya is especially
sensitive to the needs of the AIDS community.

Montoya has a Masters of Public Affairs from the Lyndon B.
Johnson School of Public Affairs. Montoya has been involved in
health, environmental and energy policy issues for the past seven
years, both at the grassroots level and at the federal level as
assistant to the Chair and Director of a Federal Fleet Conversion
Task Force. He has a strong background in organization and
management of program, research, communication and/or legislative
oriented projects. He has worked on HIV/AIDS organizations as a
volunteer, board member, as well as Chair of the Board that
include the HIV Wellness Center, AIDS Services of Austin, Project
Transitions AIDS Hospice, Austin Latino Lesbian and Gay
Organization (ALLGO), Informe

-SIDA, Caritas Clinic, Joseph's House and Dignity AIDS Ministry. He has developed an understanding and strong working relationship with the Office of National AIDS Policy at the White House as well as the AIDS program support offices at HRSA, Centers for Disease Control (CDC), National Institutes of Health (NIH), Federal Drug Administration (FDA), Health and Human Services (HHS), and Housing and Urban Development (HUD).

Daniel had worked as Special Assistant to the Commissioner of the Texas General Land Office for over seven years where he developed writing, research, legislative and project management skills. he has also been on detail from that office to the General Services Commission Director, Lieutenant Governor Bob Bullock, State Senator Rodney Ellis, and the State

-Federal Office in Washington,
D.C. on state and federal research and legislative policy issues.

"The Changing Epidemiology of Acquired Drug-Resistant Tuberculosis in San Francisco, USA"

"HIV Blocked by Chemokine Antagonist"

"At-Home Kits Test Medical Policies"

Richmond Times-Dispatch (10/15/96) P. A1

As the number of Americans using home health test kits increases, questions are being raised about the lack of government guidelines for such tests. Americans spent more than \$1 billion on home tests in 1995, a 13 percent increase over the previous year. The Food and Drug Administration only approved the first home HIV test this year after six years of debate and only after phone counseling was added as a requirement. Although the agency regulates such tests for effectiveness, it has not established a policy on how to determine whether a test is appropriate for society. The FDA has recently been forced to deal with the question again after an Atlanta mother developed and marketed a home drug-use detection kit to other parents. The FDA said she violated federal law, but the product has been allowed to stay on the market while the case is under further consideration.

"Shoo Flu, Don't Bother Me"

Washington Post--Health (10/15/96) P. 7; Squires, Sally

The Centers for Disease Control and Prevention (CDC) predicts that this year's influenza season is likely to be a bad one, with the advent of at least one strain of flu virus that has been linked to severe symptoms. The CDC therefore recommends that people in high-risk groups--including the elderly; people infected with HIV; those receiving cancer therapy; and children and adults with chronic health conditions--become vaccinated against the virus. This year's flu vaccine contains three strains of killed virus, as have vaccines in past years, but researchers are also working on several ways to improve the vaccine, including using live influenza virus administered by a nasal spray, and developing new ways of streamlining production of vaccines so the protection can be more widely distributed. High-risk people who cannot be vaccinated, such as those with allergies to eggs, may be protected against influenza A varieties with antiviral drugs such as amantadine and rimantadine.

"Condoms a Safer Sell in South Korea"

Chicago Tribune (10/14/96) P. 4-5

Since talking about sex in public is taboo in South Korea, stores are therefore reluctant to display condoms and consumers are embarrassed to be seen buying them. As an alternative, entrepreneur Paek Myong-ju has packaged condoms in trinkets including cigar boxes, compact discs, wedding bouquets, and walnuts. The camouflaged condoms are sold in convenience stores, department stores, and through mail order. Paek, who sold 100,000 walnut condoms alone in January, reports that most of his customers are female.

"South Africa Slow to Battle Spread of Tuberculosis"
New York Times (10/13/96) P. 12; McNeil, Donald Jr.

Although the World Health Organization has called South Africa's tuberculosis (TB) problem the worst in the world, the country's government has been slow to respond to the emergency. South Africa has the highest reported infection rate--about 350 cases per 100,000 people--and an increasing rate of drug-resistant TB, which kills 54 percent of patients it infects. The problem is partly attributed to a rise in drug use and the spread of HIV, which can increase susceptibility to TB. Moreover, a government plan to train nurses in the latest treatment methods, establish a case register, and build 200 mini-laboratories to facilitate rapid diagnosis is facing bureaucratic barriers.

"Judge Finds D.C. Medicaid in Violation"
Washington Post (10/12/96) P. A1; Locy, Toni

A federal judge has ruled that Washington, D.C.'s Medicaid program is failing to reach thousands of poor residents--and is threatening their health and violating their constitutional rights. U. S. District Judge Gladys Kessler said the program's problems range from failing to process Medicaid applications on time to inefficiently assigning doctors to recipients. Kessler pointed to examples of patients who are suffering as a result, including Karl Von Faust, who has AIDS and had to enroll in drug trials to pay for his medicine. The judge set a hearing date in November at which time she will decide how to remedy the program's problems.

"Culture, et cetera: Sex Club Mission"
Washington Times (10/15/96) P. A2

A safe-sex club has opened in San Francisco, according to an article in the October 7 issue of U.S. News & World Report. Eros, the Center for Safe Sex, provides free condoms and other safe-sex supplies, offers a massage studio and sauna, as well as safe-sex lessons. Gay sex clubs have returned, and city officials and AIDS activists cannot decide if they are a public health threat or benefit. Some activists say the clubs will contribute to the increased spread of HIV in the gay community, but others hope they will offer HIV education for those most at-risk.

"Animal Research Key to Progress"
USA Today (10/15/96) P. 14A; Paris, Susan E.

The award of the Nobel Prize in medicine for work in immunology serves as a reminder that animals are vital to medical progress, notes Susan E. Paris, president of Americans for Medical Progress, in a letter to the editor in USA Today. Paris points out that the research that won the prize involved the study of laboratory mice and resulted in the knowledge of how the immune system targets viruses. She argues that animal rights activists would have liked to derail such research 20 years ago, and that continued efforts by activists could deny progress against AIDS, cancer, and other diseases.

"China Sounds Alarm on AIDS"

United Press International (10/15/96)

Chinese health officials report that AIDS is spreading rapidly throughout the country, adding that government AIDS campaigns were not effective. The State AIDS Supervision Station said AIDS awareness was low among members of high-risk groups and that most HIV infections are attributed to intravenous drug use. By the end of 1995, China had 3,341 documented HIV cases. In that year, 1,567 cases were added, compared to 502 new cases in 1994. The Ministry of Health estimates that close to 10,000 people are infected with HIV, and independent activists and experts say the number is closer to 100,000. The government has appropriated \$1.8 billion for national AIDS work this year.

"The Changing Epidemiology of Acquired Drug-Resistant Tuberculosis in San Francisco, USA"

Lancet (10/05/96) Vol. 348, No. 9032, P. 928; Bradford, Williamson Z.; Martin, Jeffrey N.; Reingold, Arthur L.

The emergence of drug-resistant *Mycobacterium tuberculosis* in recent years has created a serious global health threat. To effectively control tuberculosis (TB) and determine what the best treatment options are, the factors that contribute to drug-resistance must be defined. Dr. Peter M. Small, of Stanford Medical School, and colleagues studied the trend of drug-resistance in San Francisco, a city that has had an effective TB control program. The researchers considered all reported TB cases in San Francisco between 1985 and 1994. They found evidence that 14 patients who were infected with susceptible *M. tuberculosis* later developed drug-resistance. Among these cases, two occurred between 1985 and 1989, and the remainder were reported between 1990 and 1994. Acquired drug-resistance was associated with AIDS, non-compliance with therapy, and gastrointestinal symptoms. The authors conclude that the increasing prevalence of HIV/TB co-infection can be attributed to the increase in acquired drug resistance in San Francisco. They also suggest that conventional TB control measures may not be adequate in communities with high rates of HIV infection.

"HIV Blocked by Chemokine Antagonist"

Nature (10/03/96) Vol. 383, No. 6599, P. 400; Arenzana-Seisdedos, Fernando; Virelizier, Jean-Louis; Rousset, Dominique; et al.

Recent research has shown that HIV-1 depends on chemokine receptors to act as cell surface co-receptors to enter and infect cells. Scientists from the Pasteur Institute, the University of British Columbia, and the University of Bern report that a modified version of the chemokine RANTES can block HIV-1 without prompting the adverse effects the original compound causes. The findings suggest that "receptor signaling and cell activation is probably not required for the anti-HIV effect of chemokines," and that therapeutic agents could be developed as a result, the authors conclude.

"State Court Expands Human Rights Law"

New York Times (10/16/96) P. B5; Dao, James

The New York State Court of Appeals announced a decision Tuesday that significantly extends the protection of people with HIV from discrimination by doctors and dentists. The court ruled that the state's Human Rights Law, which prohibits discrimination in employment, housing, and public accommodations, should be interpreted to cover the offices of doctors and dentists, as well as any place that provides "conveniences and services to the public." The court was considering two cases in which people charged that they had been denied dental services because they had tested positive for HIV or had been exposed to the virus.

"Dual Strategy to Fight Both TB and AIDS"

Wall Street Journal (10/16/96) P. A21; Sbarbaro, John

A combined strategy is needed to fight the spread of HIV and tuberculosis (TB), contends Dr. John Sbarbaro, Medical Adviser to the Global TB Education Fund, in a letter to the editor in the Wall Street Journal. He notes that TB causes the most AIDS-related deaths worldwide, and that treating AIDS patients effectively for TB could prevent nearly 4 million TB cases and increase the lives of people with HIV by an average of two years. Without such precautions, Sbarbaro says, people infected with HIV and TB will die earlier than necessary, and TB will continue to spread to the general population.

"Across the USA: New Jersey"

USA Today (10/16/96) P. 9A

A survey of 625 New Jerseyans found that 92 percent support government aid for people who have a health problem for which they are not responsible, such as those who contract HIV through blood transfusions. Only 53 percent of those polled thought that people who contracted HIV through unsafe sex should be eligible for government aid, however.

"PM's Brother May Testify at Krever Blood Inquiry"

Toronto Globe and Mail (10/15/96) P. A1; McIlroy, Anne

Because of his connection to the leader of Canada's commission of inquiry into the country's tainted-blood tragedy, the brother of Prime Minister Jean Chretien is expected to be called in an inquiry hearing this week. Michel Chretien, a scientist at the Clinical Institute of Montreal, served with Justice Horace Krever as co-chairman of the Royal Society of Canada report on AIDS in 1988. That report made recommendations on preventing the spread of HIV in Canada and treating those who were infected. The Ontario government is expected to call Chretien to testify at the hearings, which are being held to allow those parties cited for

blame in the tragedy to defend themselves. Ontario is expected to argue that the 1988 report shows that the committee did not realize the implications of the tainted-blood incidents, and that, therefore, the provincial and federal governments cannot be blamed for not taking action.

"Teen-Agers Find Drugs Easy to Obtain and Warnings Easy to Ignore"

New York Times (10/10/96); Wren, Christopher S.

The increase in marijuana use among teen-agers, reported in a recent government study, was confirmed by interviews with 30 teens in New York and Massachusetts. Teenagers from working-class and suburban neighborhoods across the country said that marijuana is as easily obtained as beer or cigarettes. The interviews found that marijuana is the most popular drug among teenagers, and that cocaine and heroin use are not nearly as prevalent. The teens said anti-drug campaigns were ineffective, adding that parents, teachers, and other adults have little impact on their choice to use drugs. Moreover, they said they did not start using marijuana because of peer pressure, but because it seemed fun and offered some escape.

"Brazil Votes to Give AIDS Patient Free Drugs"

Reuters (10/15/96)

Legislation that would provide free drugs to AIDS patients was approved by Brazil's Chamber of Deputies on Tuesday, congressional officials said. "This bill will save the lives of people who are HIV-positive and cannot afford the cocktail of drugs," noted Green party deputy Fernando Gabeira, the author of the bill. The measure--already approved in the Senate--will be sent to President Fernando Henrique Cardoso for final approval. It is not yet known, said Gabeira, how much the government will have to spend to fulfill the terms of the new law.

"Quick Action Can Curb Drug-Resistant TB"

Reuters (10/15/96)

Drug-resistant tuberculosis (TB) can be spread in hospitals and is often deadly, but early diagnosis and proper treatment can extend the lives of patients, according to researchers from the New York City Department of Public Health. A review of 267 TB cases over a 43-month period found that 86 percent of patients also were infected with HIV, that 70 percent of the TB infections were likely acquired in hospitals, and that 83 percent of the patients died during the study period. The researchers concluded that, with quick diagnosis and proper treatment, patients with damaged immune systems and drug-resistant TB lived up to a year longer. The study appears in this week's issue of the Journal of the American Medical Association, with a related study that found that 27 percent of 229 TB patients in New York City in 1991 died within one year.

"BioChem Pharma Says Emory Patent Claims Invalid"

Business Wire (10/15/96)

BioChem Pharma, the maker of 3TCr (lamivudine), filed a response

on Tuesday to a patent infringement lawsuit brought by Emory University. Francesco Bellini, CEO of BioChem, says the company welcomes the chance to settle the patent issue and "finally put to rest Emory University's baseless claims to 3TCr." BioChem Pharma currently receives royalties on the AIDS drug from Glaxo Wellcome under a licensing agreement that has permitted Glaxo to manufacture and sell the drug since 1995.

"Following the Inner Light"

Science News (10/05/96) Vol. 150, No. 14, P. 220; Travis, John

Frustrated with the methods available to track how infection spreads in the body, Stanford University virologist Christopher H. Contag developed a better way, using bioluminescence. Luciferase, an enzyme that occurs naturally in fireflies and certain glowing bacteria, has long been used by scientists. Contag proposed inoculating live animals with bioluminescent microorganisms to observe their action in the body from outside. The researchers experimented by inoculating mice with salmonella that had been engineered with the luciferase gene. The weakest strain of salmonella was quickly eliminated by the mouse, while the strongest strain spread rapidly through the body's tissues. The researchers suggest that the new technique will be useful in tracking infections, including HIV, and monitoring how effective various drugs are at fighting infection. Genetically engineered mice have been developed that can simulate HIV infection, and with further research, SIV infections in primates might be similarly studied.

"Bringing Medicine Home"

Consumer Reports (10/96) Vol. 61, No. 10, P. 47

HIV tests have joined the ranks of medical tests that can be performed at home, including tests for pregnancy, ovulation, cholesterol, blood pressure, and blood sugar. About \$1 billion is now spent by Americans on such products, which offer privacy and are usually less expensive than a professional test. A survey by the government found that, while only 20 percent of people at increased risk for HIV said they planned to seek a professional HIV test within a year, 42 percent said they would likely use a home HIV test. Because a positive HIV test result can be traumatic, the companies selling home HIV tests only provide results over the phone. The consumer, identified by a confidential code number, hears a recorded message if the test result is negative and is connected to a counselor if the test is positive.

"State Court Expands Human Rights Law"

New York Times (10/16/96) P. B5; Dao, James

The New York State Court of Appeals announced a decision Tuesday that significantly extends the protection of people with HIV from discrimination by doctors and dentists. The court ruled that the state's Human Rights Law, which prohibits discrimination in employment, housing, and public accommodations, should be interpreted to cover the offices of doctors and dentists, as well as any place that provides "conveniences and services to the public." The court was considering two cases in which people charged that they had been denied dental services because they had tested positive for HIV or had been exposed to the virus.

"Dual Strategy to Fight Both TB and AIDS"

Wall Street Journal (10/16/96) P. A21; Sbarbaro, John

A combined strategy is needed to fight the spread of HIV and tuberculosis (TB), contends Dr. John Sbarbaro, Medical Adviser to the Global TB Education Fund, in a letter to the editor in the Wall Street Journal. He notes that TB causes the most AIDS-related deaths worldwide, and that treating AIDS patients effectively for TB could prevent nearly 4 million TB cases and increase the lives of people with HIV by an average of two years. Without such precautions, Sbarbaro says, people infected with HIV and TB will die earlier than necessary, and TB will continue to spread to the general population.

"Across the USA: New Jersey"

USA Today (10/16/96) P. 9A

A survey of 625 New Jerseyans found that 92 percent support government aid for people who have a health problem for which they are not responsible, such as those who contract HIV through blood transfusions. Only 53 percent of those polled thought that people who contracted HIV through unsafe sex should be eligible for government aid, however.

"PM's Brother May Testify at Krever Blood Inquiry"

Toronto Globe and Mail (10/15/96) P. A1; McIlroy, Anne

Because of his connection to the leader of Canada's commission of inquiry into the country's tainted-blood tragedy, the brother of Prime Minister Jean Chretien is expected to be called in an inquiry hearing this week. Michel Chretien, a scientist at the Clinical Institute of Montreal, served with Justice Horace Krever as co-chairman of the Royal Society of Canada report on AIDS in 1988. That report made recommendations on preventing the spread of HIV in Canada and treating those who were infected. The Ontario government is expected to call Chretien to testify at the hearings, which are being held to allow those parties cited for blame in the tragedy to defend themselves. Ontario is expected to argue that the 1988 report shows that the committee did not realize the implications of the tainted-blood incidents, and that, therefore, the provincial and federal governments cannot be blamed for not taking action.

"Teen-Agers Find Drugs Easy to Obtain and Warnings Easy to Ignore"

New York Times (10/10/96); Wren, Christopher S.

The increase in marijuana use among teen-agers, reported in a recent government study, was confirmed by interviews with 30 teens in New York and Massachusetts. Teenagers from working-class and suburban neighborhoods across the country said that marijuana is as easily obtained as beer or cigarettes. The interviews found that marijuana is the most popular drug among teenagers, and that cocaine and heroin use are not nearly as prevalent. The teens said anti-drug campaigns were ineffective, adding that parents, teachers, and other adults have little impact on their choice to use drugs. Moreover, they said they

did not start using marijuana because of peer pressure, but because it seemed fun and offered some escape.

"Brazil Votes to Give AIDS Patient Free Drugs"

Reuters (10/15/96)

Legislation that would provide free drugs to AIDS patients was approved by Brazil's Chamber of Deputies on Tuesday, congressional officials said. "This bill will save the lives of people who are HIV-positive and cannot afford the cocktail of drugs," noted Green party deputy Fernando Gabeira, the author of the bill. The measure--already approved in the Senate--will be sent to President Fernando Henrique Cardoso for final approval. It is not yet known, said Gabeira, how much the government will have to spend to fulfill the terms of the new law.

"Quick Action Can Curb Drug-Resistant TB"

Reuters (10/15/96)

Drug-resistant tuberculosis (TB) can be spread in hospitals and is often deadly, but early diagnosis and proper treatment can extend the lives of patients, according to researchers from the New York City Department of Public Health. A review of 267 TB cases over a 43-month period found that 86 percent of patients also were infected with HIV, that 70 percent of the TB infections were likely acquired in hospitals, and that 83 percent of the patients died during the study period. The researchers concluded that, with quick diagnosis and proper treatment, patients with damaged immune systems and drug-resistant TB lived up to a year longer. The study appears in this week's issue of the Journal of the American Medical Association, with a related study that found that 27 percent of 229 TB patients in New York City in 1991 died within one year.

"BioChem Pharma Says Emory Patent Claims Invalid"

Business Wire (10/15/96)

BioChem Pharma, the maker of 3TCr (lamivudine), filed a response on Tuesday to a patent infringement lawsuit brought by Emory University. Francesco Bellini, CEO of BioChem, says the company welcomes the chance to settle the patent issue and "finally put to rest Emory University's baseless claims to 3TCr." BioChem Pharma currently receives royalties on the AIDS drug from Glaxo Wellcome under a licensing agreement that has permitted Glaxo to manufacture and sell the drug since 1995.

"Following the Inner Light"

Science News (10/05/96) Vol. 150, No. 14, P. 220; Travis, John

Frustrated with the methods available to track how infection spreads in the body, Stanford University virologist Christopher H. Contag developed a better way, using bioluminescence. Luciferase, an enzyme that occurs naturally in fireflies and certain glowing bacteria, has long been used by scientists. Contag proposed inoculating live animals with bioluminescent microorganisms to observe their action in the body from outside. The researchers experimented by inoculating mice with salmonella that had been engineered with the luciferase gene. The weakest

strain of salmonella was quickly eliminated by the mouse, while the strongest strain spread rapidly through the body's tissues. The researchers suggest that the new technique will be useful in tracking infections, including HIV, and monitoring how effective various drugs are at fighting infection. Genetically engineered mice have been developed that can simulate HIV infection, and with further research, SIV infections in primates might be similarly studied.

"Bringing Medicine Home"

Consumer Reports (10/96) Vol. 61, No. 10, P. 47

HIV tests have joined the ranks of medical tests that can be performed at home, including tests for pregnancy, ovulation, cholesterol, blood pressure, and blood sugar. About \$1 billion is now spent by Americans on such products, which offer privacy and are usually less expensive than a professional test. A survey by the government found that, while only 20 percent of people at increased risk for HIV said they planned to seek a professional HIV test within a year, 42 percent said they would likely use a home HIV test. Because a positive HIV test result can be traumatic, the companies selling home HIV tests only provide results over the phone. The consumer, identified by a confidential code number, hears a recorded message if the test result is negative and is connected to a counselor if the test is positive.

|Subject: Host Info for Vaccine Conference Calls.
|Date: Tuesday, October 15, 1996 6:51 PM
|
|
|

|Dear Kimberly,
| Would you confirm for me that the "AIDS vaccine" conference calls
| scheduled for Friday 25 October, and Wednesday 4 December, are reserved
| with AT&T for the time slots of 9:50am - 11:45am Eastern Time with 20 ports
| each?
|

| Also, can you provide me and Jane Sanville with a copy of the "host"

information sheet and host code so we can resolve any last-minute glitches directly?

I plan to finish the agenda for next Friday's call by this Friday, and

will
e-mail and fax it to you for redistribution to all Council members.

Thanks!
Bruce

READ:21-OCT-1996 10:07:45.80

TEXT:

Dear Jeff,

As you requested, I'd be happy to route logistics requests regarding conference calls I am organizing via whomever you designate.

But it would be helpful to set up some responsibilities and mechanisms to avoid repeating the embarrassing episode during our September 24 call when our final informant, Prof. Max Essex, was cut off because the scheduled amount of time in our agenda had not been arranged in advance with AT&T, and no one participating in the call had the "host" code nor instructions for how to contact AT&T to extend the time or to make other last-minute adjustments.

In fact, when I checked with AT&T the other day, they were programmed for more time than we needed for the October 25 call (2h15m, rather than 1h55m), and were not starting at the time indicated in the agenda of 9:55 am. The reduction downward in time should save some money. (I also learned that our planned November 14th non-vaccine Research Committee call had been inadvertently set up for November 4th.)

May I suggest that for each call some specific person(s) be designated, in SSS and/or ONAP, who

(1) will be registered with AT&T as the "host" or "co-hosts" for the call and provided with host code and instructions,

(2) will confirm that the advance arrangements with AT&T match the specific agenda and anticipated number of participants in the call,

(3) will listen in to the entire call, and

(4) be authorized, if needed, to contact the AT&T operator during the call to extend the time a reasonable amount, or to request additional ports.

Council members could then be informed in advance who this person is and at what non-voicemail phone number to call them in case insufficient ports have been reserved and they have difficulty getting connected.

Thanks!

Bruce

CDC National AIDS Clearinghouse
Conference Calendar Database

NEW CONFERENCE LISTINGS
October 15, 1996

The Clearinghouse's Conference Calendar Database contains information about upcoming conferences related to HIV and AIDS.

NAC ONLINE users can search this database by selecting "Clearinghouse Databases" from the NAC ONLINE main menu. When asked to enter a database name, specify "CONF" to search the Calendar.

To access the NAC ONLINE BBS, set your communications software to dial (800) 851-7245, and set the options for 8 data bits, N parity, 1 stop bit, full duplex, and complete a new user questionnaire. Only non-profit organizations, government agencies, educational institutions, and health departments are given full access to NAC ONLINE and the NAC databases.

Overnight, 6 new listings were loaded to the Conference Calendar Database. Their records follow:
