R U D E R • F I N N

April 10, 2000

Ms. Sandy Thurman
Director
Office of National AIDS Policy
The White House
736 Jackson Place
Washington, DC 20503

Dear Ms. Thurman:

Ruder Finn would like to commend you for your support of HIV/AIDS prevention, awareness and research activities. It is this type of hard work and dedication that will make a difference, worldwide, in the struggle to fight and find a cure for AIDS. President Clinton's recent efforts, including the LIFE initiative, will surely continue the United States' effective role in assisting human development in Africa – a role that began with USAID over 40 years ago. We are writing to inquire about ways that we can work together with the Administration's current activities so that we can bring awareness to the US of Zambia's AIDS epidemic and also provide assistance to AIDS-related programs in Zambia.

We are a public relations firm with offices worldwide. In the Washington office, we represent the Republic of Zambia and are presently launching their AIDS awareness campaign in the U.S. As you may have seen in *Newsweek's* January 17, 2000 issue, "Africa's Plague Years," Zambian faces have become synonymous with the AIDS epidemic in Africa. The Republic of Zambia is currently confronting one of the highest rates of HIV/AIDS cases (1 in every 5 people, aged 15-49) found anywhere in the world. We have enclosed a copy of the article.

With the few resources currently available, Zambia's Ministry of Health has been able to implement some effective programs to raise awareness of AIDS and also to care for current AIDS sufferers. Their Home-Based Care program for AIDS sufferers sets the standard for quality and efficiency for many developing countries. This program works with non-governmental organizations, churches and entire communities in both rural and urban areas to educate families of AIDS sufferers on how to care for their loved ones.

Additionally, President Chiluba has just announced the formation of the Cabinet AIDS Council and a National Secretariat to coordinate the governments' efforts to prevent the transmission of HIV and offer care and social support to those already infected. These new agencies will increase efficiency by coordinating efforts previously undertaken by a number of individual programs.

April 10, 2000

Ruder Finn works closely with the State House, the Ministry of Health, as well as with community organizations in Zambia that could use assistance to further their scientific research or to further develop the community outreach programs that assist AIDS orphans and those surviving with AIDS.

We would like to meet with you to discuss Zambia's AIDS awareness campaign in the US and what resources are available to assist the Zambian government in its efforts to fight the AIDS crisis. I will contact your office in a few days to determine the possibility of a meeting.

Thank you for your continued support.

Regards,

Subject: [cancercure] Two questions for Vincent Gammill

On December 4, 1999, this letter was first posted to the e-mail resource 'cancercure@egroups.com'.

www.jsr1936.com **The Cure for Cancer?** John Stacy Roberts jsr1936@jsr1936.com

The dark ages - we live in the **darkest age** of all time relative to the cure for cancer.

On December 3, 1999, Vincent Gammill posted the following to cancercure@egroups.com:

"John Stacy Roberts writes:

'I want to make it clear to everyone what I have done thus far in 'publishing' www.jsr1936.com on The Internet and posting my 50 letters (including this one) to cancercure@egroup.com.

I am a citizen of the United States of America who is expressing his first amendment right of freedom of speech.'

John,

You have your own website to exercise your freedom of speech. No one has stopped you. But what you are doing on this list is repetitious and very unwelcome spam.

You are asking for trials. Many, many scientists much, much smarter than you have looked at and rejected the chemicals use (j.s.r. - you) suggest - and with good cause. Your ideas of trials seem to include very dangerous self experiments on cancer patients who do not know pharmaceutical chemistry. I have had to delete scores of your egomaniacal demands for a Nobel prize. Please keep your delusional spam off this list. Do not post. Not once a week. Not once a month. Never.

Vincent"

Vincent,

I wish to begin this letter with the last word of your letter - 'never'.

Vincent, I shall never leave this e-group. If the owner of this list, Mr. Bob Hurt, chooses to kick me out, that is his choice.

I hope an awakened awareness begins to permeate mankind to the fact that possible cures or alleviation of symptoms for Cancer, HIV/AIDS, Alcohol Abuse, Lou Gehrig's Disease, Macular Degeneration, and Chronic Myelogenous Leukemia (CML) are described on The Internet and the address is cancercure@egroups.com.

Consequently, it is my assumption and hope that the membership of this group will steadily increase, and new members need to have the opportunity to see my weekly postings.

If this is unnecessarily repetitive, I am sure that Mr. Hurt will inform me and advise me how to proceed for everyone's benefit.

Vincent, I am not here to aggravate everybody. I am here to seek the cure for cancer. Isn't this the goal of all of us here?

Vincent, I also feel the need to re-post because I think that some members such as you are not paying

12/5/99

attention to the details of my research.

Vincent, I see you have a 'Sc.D' degree; however, your criticism of me thus far has been most unscientific. In fact, that's your problem, Vincent - you are focusing upon me and not upon my research.

Vincent, if you highlight the specific areas of my research where you think I am erroneous, then we can have a meaningful debate or dialogue, and the whole group can profit in our common effort to seek the truth.

Vincent, I am sure that you are aware of MedLine (www.ncbi.nlm.nih.gov/pubmed); however, other members of the group might not be so aware.

Vincent, in the future when you make such statements as, "....Many, many scientists much, much smarter than you have looked at and rejected the chemicals use (j.s.r. - you) suggest - and with good cause....", would you please cite in MedLine the specific reference to which you refer. Or if it is not in MedLine, please provide all of the bibliographic details.

From what I have seen thus far, the case against Thioproline is based upon scanty and skimpy evidence; see the 6 item entry on the first page of 'Miracle medicine to cure Cancer - does it already exist?'

The longest report is No. 2 in which the National Cancer Institute sponsored Thioproline research on rats and mice in 1980 **after** it had seen the amazing results which Thioproline had engendered in **human beings** in 1979; this study had also been sponsored by the National Cancer Institute.

I am still shocked, dumbfounded and dismayed that this paucity of research cited in these 6 items constituted the basis for abnegating interest in a compound which showed such glowing promise.

In a response to his critics the co-author, Dr. Mario Gosalvez, of the Spanish clinical trial **which involved human beings** stated:

".....However, reports of our later work given at scientific meetings or in the pipeline, confirm that thioproline does induce reverse transformation and that the whole concept, despite its complexities, is promising."

Let's give the scanty and skimpy research the benefit of a doubt and say that - yes indeed - it did root out the core of the problem with Thioproline - it is too toxic.

However, for the past two years I have been alerting Federal Health Officials in the Washington, D.C. area that my research has demonstrated that vitamin C affords **PHENOMENAL PROTECTION** against the toxicity of Thioproline. The concept is based upon the 'Ascorbic Acid Flush' as described on page 539 of the second edition of Prescription for NUTRITIONAL HEALING by James F. Balch, M.D. and Phyllis A. Balch, C.N.C.

My research has demonstrated that vitamin C affords mankind the golden key by which we can unleash the full power of Thioproline, a substance which achieved these results 20 years ago when administered to human beings with cancer -

".....Histological studies showed involution and transformation into low-grade malignancies and disappearance of evidence of cancer."

"Thioproline.....had a considerable antitumour effect in epidermoid carcinoma of the head and neck. Definite signs of activity were observed in epidermoid carcinoma of other regions and in other solid tumours, such as breast, renal, ovary, thyroid, and parotid cancer."

For two decades no one has ever thought to ask this question - "Could a human being swallow a substance which would off set the toxicity of Thioproline thereby allowing 'mega-doses' of it to be swallowed?"

Vincent, I am the only person ever to ask and answer that question - yes there is - vitamin C.

Vincent, this is a Nobel Prize winning type of question and answer if my words prove true wherein it is demonstrated that the combination of 'mega-doses' of Thioproline and vitamin C and 'above average' amounts of magnesium, zinc and manganese is the cure for cancer.

And Vincent, what if I am right about what I have to say about HIV/AIDS, Alcohol Abuse, Lou Gehrig's Disease, Macular Degeneration, and Chronic Myelogenous Leukemia (CML)?

Vincent, I wish to leave you with two questions; I would also like to place these questions before Dr. Varmus, Dr. Klausner and Dr. Pluda of the National Institutes of Health (NIH) when they eventually appear before an investigative committee of Congress -

1. Please cite for me the 'block-buster' of a study in MedLine which caused the ultimate cessation of interest in 1983 in Thioproline as an anti-cancer agent.

2. Would the 1979 Spanish clinical trial be worth repeating following the guidelines I have proposed, namely - 'mega-doses' of Thioproline and vitamin C and 'above average' amounts of magnesium, zinc and manganese. If the answer is 'no', what is your reasoning?

Come on, Vincent. Let's start getting to be specific in your statements.

If you don't, you are just wasting everyone's time.

bye for now - I'll be here for as long as Mr. Hurt lets me.

Subject: [cancercure] NIH officials should appear before Congress

On December 5, 1999, this letter was first posted to the e-mail resource 'cancercure@egroups.com'.

www.jsr1936.com [The Cure for Cancer?](#) John Stacy Roberts jsr1936@jsr1936.com

The dark ages - we live in the **darkest age** of all time relative to the cure for cancer.

My fellow citizens of the United States of America who are concerned about cancer -

National Institutes of Health (NIH) officials should be called to appear before an investigative committee of Congress.

In early 1979 it was reported that the United States National Cancer Institute (NCI) had supported research (NO1-CM-53792) in which it was determined that Thiazolidine-4-carboxylic acid (Thioprolone) "could represent the first non-cytotoxic anticancer agent which has the plasma membrane as target."

A subsequent 1979 clinical trial in Spain revealed the following results (published in January, 1980) after Thioprolone was administered to 32 human beings -

".....Histological studies showed involution and transformation into low-grade malignancies and disappearance of evidence of cancer."

" Thioprolone.....had a considerable antitumour effect in epidermoid carcinoma of the head and neck. Definite signs of activity were observed in epidermoid carcinoma of other regions and in other solid tumours, such as breast, renal, ovary, thyroid, and parotid cancer."

NIH and NCI officials should present before the committee the research subsequent to January, 1980, which caused interest in Thioprolone to be abnegated in 1983.

NIH and NCI officials should also give their opinion whether the Spanish clinical trial could be repeated in the manner described by John Stacy Roberts.

If their answer is 'no', their reasoning would be appreciated.

A weekly copy of this letter will be sent (e-mail) to Harold Varmus, M.D., Director, National Institutes of Health (NIH) and Congressman Peter J. Visclosky (regular mail).

A one time mailing of this letter will be sent to -

President Clinton, The White House, Washington, D.C.
Ms. Sandra Thurman, Director, National Aids Policy Office, The White House, Washington, D.C.
Donna E. Shalala, Ph.D., Secretary of Health and Human Services, Washington, D.C.
David Satcher, M.D., Ph.D., Surgeon General of the United States of America, Rockville, Maryland
Richard Klausner, M.D., Director, National Cancer Institute (NCI), Bethesda, Maryland
James M. Pluda, M.D., Senior Clinical Investigator, NCI, Bethesda, Maryland
Professor Andrew V. Schally, Veterans Affairs Medical Center, New Orleans, Louisiana
Robert F. Cathcart, M.D., 'Orthomolecular Medicine', Los Altos, California

12/5/99

Dr. Jorge Vazquez, San Diego Clinic, San Diego, California
Dr. Hulda Clark, 'Self Health Resource Center', Chula Vista, California
Mrs. Helen Gutierrez, 'The Herb Lady', Portage, Indiana.

My fellow citizens, if you agree with my position, would you please mail a copy of this letter to your Congressman.

Thank you,

John S. Roberts, Post Office Box H, Hobart, Indiana 46342 (219) 763-1933

[004]

December 27, 1999

Dan Glickman
U.S. Secretary of Agriculture
United States Department of Agriculture
1400 Independence Avenue SW.
Washington, DC 20250

Re: "Despite our nation's tremendous agricultural bounty, hunger remains a serious problem in America. In 1998, about 36 million people in the United States, including 14 million children, were hungry or on the brink of hunger. As a nation, I believe it is our moral obligation to feed hungry people. "
AGRICULTURE SECRETARY DAN GLICKMAN ON PRESIDENT CLINTON'S EXPANDED EFFORTS TO FIGHT HUNGER IN AMERICA December 23, 1999

Dear Secretary Glickman:

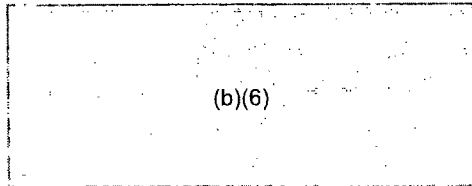

I am a person who has been diagnosed with AIDS. I receive approximately \$676 per month in Social Security Supplemental Income. I presently have no other source of income. Usually I suffer each day due to my illness and a day without pain is indeed a welcome relief.

The government has cover my hospitalization which on occasion range from 40-60 thousands dollars per stay. The government has provided pharmaceuticals which may cost from 10-20 thousands dollars per year. Additionally, monthly nutritional supplements to prevent wasting (wasting is the appearance of malnutrition), may cost about 4 thousands dollars per month or approximately 40 thousand dollars yearly. The government has provided monetary resources to vendors and medical professionals to assist me in my illness. I am appreciative to our government and most of all I give thanks to God for this opportunity to live in America.

Nevertheless, Mr. Secretary, my daily concern is food. I simply do not have the resources required to purchase food. The lack of food, promotes hospitalization. The lack of food promotes the use of pharmaceuticals. The lack of food promotes wasting. The lack of food promotes the requirement for nutritional supplements. Your **direct** assistance to the poor and needy without vendors or private organizations is required. I remain hungry each day because so-called vendors and private organizations have failed to respond appropriately to the needs of the poor. Please make it your personal business to see each and every needy person provided with resources required to maintain a health and well being within our borders.

Dan Glickman
U.S. Secretary of Agriculture
United States Department of Agriculture
"Hunger In America"
Page 2

Our dream does not permit any individual to be without the required resources to maintain a health and well existence. Our God is greater than hunger. Our God considers each and every child and none are without his kindness and his mercy and his abundant resources and grace. **We shall not invest in a few to do our work nor shall we relegate our responsibility to others.** It is an honor and a privilege to serve ourselves and mankind.

Subject: The Dark Ages prevail

On January 11, 1999, this letter was first posted to The Internet resource cancercure@egroups.com

www.jsr1936.com **The Cure for Cancer?** John Stacy Roberts jsr1936@jsr1936.com

The dark ages - we live in the **darkest age** of all time relative to the cure for cancer.

Socrates said it best:

The only good is knowledge and the only evil is ignorance.

Professor Noel Campbell
 Swinburne University of Technology
 Australia

Dear Professor Campbell,

Today I mailed to you my research which consists of 18 folders and a 6 hour videotape.

The titles of the folders are -

- No. 1 AIDS, CANCER, ALCOHOL/SMOKING ABUSE and the Power of NAC (N-Acetyl Cysteine)
- No. 2 'Shalala/Satcher Letter'
- No. 3 'This Research Caused the Abnegation of Interest in Thioproline'
- No. 4 'Letters Mailed from the Offices of the National Institutes of Health (NIH)'
- No. 5 'Debbie Hamonic's Postings'
- No. 6 "What is the reference for acetaldehyde inactivating HIV?"
- No. 7 'Two pages from the first and second edition of Prescription for Nutritional Healing relative to NutraSweet/Aspartame
- No. 8 'Part of videotape conversation which occurred in April, 1998, between Mrs. Helen Gutierrez and John S. Roberts
- No. 9 'My May 31, 1999 letter, "The Miracle of Laredo"
- No. 10 'THE REPLACEMENT BY THIAZOLIDINECARBOXYLIC ACID OF EXOGENOUS CYSTINE AND CYSTEINE' and 'The Action of Formaldehyde upon Cysteine'
- No. 11 'The postings of Mr. Jerry Rollins to cancercure@egroups.com all in 1999'
- No. 12 'My June 14, 1999 "A Letter to Two Presidents"
- No. 13 'More information as to why vitamin B-6 is so necessary in the diet of a drinker of alcohol'
- No. 14 'Valparaiso News'
- No. 15 'Form letter dated November 30, 1997, with which I hoped to solicit funding for AIDS research to take place at Bastyr University, Bothell, Washington
- No. 16 'Read it and weep, no one in authority in the United States of America seems to care about curing cancer. This folder contains a summary of the inaction in 1998 and a December 19 letter addressed to numerous parties. The same dismal scenario continued throughout 1999.
- No. 17 'Selective modulation of non-protein sulfhydryl levels in Ehrlich ascites tumor bearing mice' - "Is this the cure for HIV/AIDS?" - "Is this the cure for Cancer?"
- No. 18 'Video Tape Index'.

Professor Campbell, upon review I see I failed to include my reasoning for the treatment of Chronic

1/11/00

Myelogenous Leukemia (CML). The reasoning is not in my website, www.jsr1936.com, nor is it in my videotape. Here it is; it is found in my November 22, 1999 posting to cancercure@egroups.com and titled, 'Two falling iron balls' -

"Thanks to Mrs. Judy Singer, a member of cancercure@egroups.com, I became aware of the word 'penicillamine' in late August, 1999.

If you type 'Penicillamine and Leukemia' into 'MedLine' (www.ncbi.nlm.nih.gov/pubmed) you will find that there are 23 entries (as of November 22) which are devoted to this subject. I have found the following one to be the most interesting; the Unique Identifier number is 96273151; I have taken one sentence from it:

'.....Human acute myelogenous leukemia cells were especially sensitive to PSH plus copper.....' PSH is d-penicillamine.

A relationship exists between Penicillamine and Thiazolidine-4-carboxylic acid (Thioprolone).

The 1999 edition of the PHYSICIANS' DESK REFERENCE (PDR) states on page 1766 that penicillamine 'reacts readily with formaldehyde or acetone to form a thiazolidine-carboxylic acid.'

I will state unequivocally that the 'thiazolidine-carboxylic acid' which the PDR mentions is the same as that which I cite on pages one and two of www.jsr1936.com. I challenge the scientific and medical community of the world to refute me.

Since vitamin C (ascorbic acid) protects against the toxicity of Thiazolidine-4-carboxylic acid, might it also protect against the toxicity of penicillamine?

On about October 12, 1999, I called Dr. Cathcart's office; I believe Dr. Cathcart is a former associate of Dr. Linus Pauling; Dr. Cathcart's website is www.orthomed.com and it reads:

'ORTHOMOLECULAR MEDICINE
VITAMIN C
ROBERT F. CATHCART, M.D.'

and left this question - 'Does vitamin C afford protection against the toxicity of penicillamine?'

The next day Dr. Cathcart's secretary called me and said that, 'Dr. Cathcart doesn't have any personal experience with what you mentioned, but in theory he could see how vitamin C could protect against penicillamine.'

1. A scientific fact - Human acute myelogenous leukemia cells are especially sensitive to d-penicillamine plus copper.
2. A scientific opinion - vitamin C could possibly protect against penicillamine.
3. A scientific hypothesis - 'Mega-doses' of d-penicillamine plus copper and vitamin C will cure chronic myelogenous leukemia."

Thanks to Debbie Hamonic's input I wish to revise No. 3 - 'Mega-doses' of d-penicillamine plus copper and vitamin C and Immunocal will cure chronic myelogenous leukemia.

Professor Campbell, you should be proud of the accomplishment of a lady who was born in your country - Susan Powder.

She has written an epoch book relative to the treatment of alcoholism - SOBER...And Staying That Way - The Missing Link in the Cure for Alcoholism, published 1997.

Every alcoholic treatment center in the world should have a copy of Susan's book available for those seeking help.

In Susan's opinion, the root cause of alcoholism is physiological, not psychological. She describes in her book what steps she took to alleviate her condition.

Her experiences amply confirm the words written in 1979 by Jorge Valles, M.D.; on page 23 of his book, From SOCIAL DRINKING to ALCOHOLISM:

".....The reason for drinking and the reason for alcoholism are separate and distinct, and must be regarded apart from each other. Laboratory experiments on animals have demonstrated the fact that the ingestion of alcohol can produce alcoholism. Furthermore, it is not necessary to have a previous psychological condition in order to develop chronic alcoholism. This point was amply demonstrated in the writings of Drs. L. Goldberg and R.G. Bell. A person who is healthy in all respects can fall victim to the disease of alcoholism if he ingests great quantities of alcohol over a long enough period of time. In a word, no previous psychological or emotional disorder is necessary."

Professor Campbell, if I speak the truth, my procedures describe effective means to treat Cancer, HIV/AIDS, Alcohol Abuse, Lou Gehrig's Disease, Macular Degeneration, and Chronic Myelogenous Leukemia.

Yours truly,

John S. Roberts, Post Office Box H, Hobart, Indiana 46342 (219) 763-1933

Copies to all those listed in 'Australia, please lead the world and conduct experiments and clinical trials.'

Dear Director Thurman,

I would like to introduce Turtledove Associates, a service oriented around *helping people relate...* individuals, teams, communities; as a sounding board, conflict resolution, independent opinion, arbitrator/mediator. Human relations of any kind, across any border.

Having been married and now openly gay, i am keenly aware of tensions around the subject of AIDS. (b)(6) If there is ever a service i could render for your organization, as a confidential mirror to you, or where ever a neutral party can lend an ear or hand, please call upon me.

Kind regards,

Peter Schmidt

Subject: [cancercure] Miracle medicine to cure Cancer - does it already exist?

On November 29, 1999, this letter was first posted to the e-mail resource cancercure@egroups.com.

www.jsr1936.com **The Cure for Cancer?** John Stacy Roberts jsr1936@jsr1936.com

Dear People of the World,

I have not yet reviewed all of the criticism which has been levelled against the usage of Thioproline (Thiazolidine-4-carboxylic acid) as an anti-cancer agent; however, I have reviewed much of it.

I am forced to conclude that, unless there is a 'block-buster' of a study in existence of which I am unaware, that the medical community's decision to abnegate interest in Thioproline as a cancer cure is based upon scanty evidence.

I hope I am proved to be a consummate and absolute fool; I hope the medical establishment provides evidence that it did everything under the sun to investigate the potentiality of Thioproline; in my opinion, this compound is the 'Miracle medicine' to cure Cancer.

However, the evidence of criticism against Thioproline as a cancer cure which I have thus far come across is sparse -

1. A 1980 'letter to the editor' of "The Lancet"; five patients were involved.
2. A 1980 eight page report (two pages are photographs) in "Cancer Treatment Reports"; the experiment was done on rats and mice.
3. A 1981 'letter to the editor' of "The Lancet"; 48 patients were involved.
4. A 1981 'letter to the editor' of the "European Journal of Clinical Oncology"; 37 patients were involved; the title boldly proclaims - "Thioproline (Norgamem): a Useless Drug in the Treatment of Squamous Cell Carcinoma"; the report is barely one page long and contains a bibliography with two citations.
5. A 1982 article in "Cancer Treatment Reports"; the article is barely one page long (plus a paragraph) and contains a bibliography with four citations.
6. A 1983 article (one page and a quarter) in "The Lancet" which summarized entries 1., 3. and 4.

".....It almost seemed too good to be true - and sadly so it proved. Other groups were unable to detect any anti-tumour activity whatsoever, and in addition reported alarming central nervous system toxicity including confusion and psychosis. One of these, an EORTC study group (j.s.r - one man authored the report) using thioproline supplied by Brugarolas, succinctly described the drug as useless."

If the aforementioned articles constitute the bulk of the argument against Thioproline, I am shocked, dumbfounded and dismayed by this paucity of research.

To me this evidence clearly reveals the fact that the medical establishment did not launch a 'Manhattan Project' to explore the potentiality of Thioproline, a substance which 20 years ago effected these results when administered to 32 human beings in Spain -

".....Histological studies showed involution and transformation into low-grade malignancies and disappearance of evidence of cancer."

11/29/99

"Thioprolone.....had a considerable antitumour effect in epidermoid carcinoma of the head and neck. Definite signs of activity were observed in epidermoid carcinoma of other regions and in other solid tumours, such as breast, renal, ovary, thyroid, and parotid cancer."

In a response to his critics the co-author, Dr. Mario Gosalvez, of the Spanish study, 'The Lancet', January 12, 1980, pages 68 to 70, stated in a letter to the editor of 'The Lancet', May 14, 1983:

".....However, reports of our later work given at scientific meetings or in the pipeline, confirm that thioprolone does induce reverse transformation and that the whole concept, despite its complexities, is promising."

For those of you too young to know, the 'Manhattan Project' was the effort initiated and completed by the United States Government during World War II to develop the atomic bomb.

Instead of a 'Manhattan Project', the medical community of the world settled for scanty evidence to abnegate interest in Thioprolone.

How can the United States National Cancer Institute explain its actions?

In 'Two falling iron balls' I state:

"In 1979 it was published that the National Cancer Institute initially sponsored research on Thioprolone (contract NO1-CM-53792) which led to a clinical trial involving human beings in Spain.

Glowing results were obtained and reported in January, 1980.

Why didn't the National Cancer Institute sponsor a clinical trial in the United States which would have investigated Thioprolone's effectiveness upon human beings?

Later in 1980 why was the National Cancer Institute (NCI) content to sponsor research (grant CA-24543, Contract NO1-CM-97278) in which experiments were merely done upon rats and mice?"

To counter my argument today the NCI might say that the primary focus of that experiment was to determine the toxicity level of Thioprolone, and human beings could not be endangered by being exposed to such a risk.

However, for the past two years (see last page of www.jsr1936.com) I have been imploring not only the NCI but also the Secretary of Health and Human Services, the Surgeon General, the Director of the National Institutes of Health, Chief of the Antiviral Evaluations Branch (NCI), and the Senior Clinical Investigator (NCI) to repeat the Spanish clinical trial, but this time also include vitamin C.

My research has demonstrated that vitamin C affords **PHENOMENAL PROTECTION** against the toxicity of Thioprolone; thus, 'mega-doses' of Thioprolone could be swallowed.

Let me remind everyone of the starkness of the simplicity of my suggestion - for the past two years I have been imploring Federal Health Authorities to repeat an established clinical trial which was reported 20 years ago in one of the world's foremost and prestigious medical journals.

People of the world - this is the totality of my suggestion - that the Spanish clinical trial be repeated with the oral administration of 'mega-doses' of Thioprolone and vitamin C and 'above average' amounts of magnesium, zinc and manganese.

Throughout the course of the past two years I have not received a definitive response from any Federal Health Official in the Washington, D.C. area.

For readers unwilling to wait any longer I describe my anti-cancer procedure on pages 7 to 9 (left hand side pagination) of www.jsr1936.com.

In 'Two falling iron balls' I give the addresses of two chemical companies in the United States which stock Thioproline.

If people knew a little bit about chemistry, they could make it for themselves; it is not illegal to do so, nor would anyone's patent right be infringed upon; see page 7 of www.jsr1936.com; look underneath the words, **SARAH RATNER WROTE IT - .**

20 years ago in the Spanish clinical trial only 5 mg/kg. of Thioproline was orally administered, and the results were not encouraging. But guess what - the one case in which there was remission was that of renal-cell (kidney) cancer, and it is my understanding that this type of cancer is almost impossible to cure.

My procedure suggests that the initial oral dosage be 40 mg/kg. of Thioproline, and experience will show whether this amount could be increased.

The Lethal Dosage amount for Thioproline is 210 mg/kg. I wish to suggest the impossible - with the protection afforded by vitamin C, perhaps this amount could be administered; perhaps twice this amount could be administered - 420 mg/kg.; perhaps three times this amount could be administered - 630 mg/kg.

Dr. Albert Szent-Gyorgyi has said:

"Discovery consists in seeing what everybody else has seen and thinking what nobody has thought."

I know I irk many readers when I mention the Nobel Prize and my name on the same page; however, in a November 11, 1999 posting ('Nobel Prize') to cancercure@egroups.com I stated:

"On the first page of www.jsr1936.com I ask this question:

'SHOULD JOHN STACY ROBERTS BE AWARDED A NOBEL PRIZE IN MEDICINE FOR HIS RESEARCH INTO CANCER, HIV/AIDS AND ALCOHOL ABUSE?'

Am I being presumptuous?

I have heard it said that if you don't toot your own horn, someone else will make a spittoon out of it.

Picture this scenario -

20 years ago Thiazolidine-4-carboxylic acid was administered to 32 human beings (not rats and mice) and these were some of the results -

'.....Histological studies showed involution and transformation into low-grade malignancies and disappearance of evidence of cancer.'

This acid '.....had a considerable antitumour effect in epidermoid carcinoma of the head and neck. Definite signs of activity were observed in epidermoid carcinoma of other regions and in other solid tumours, such as breast, renal, ovary, thyroid, and parotid cancer.'

Like all chemotherapeutic agents, this acid is toxic, and this is one of the reasons why interest in it was abandoned.

However, during the past 20 years, one simple question has not been asked.

The National Cancer Institute has not asked it.
The Mayo Clinic has not asked it.
The Harvard Medical School has not asked it.
Johns Hopkins has not asked it.
Sloan-Kettering has not asked it.

For the past 20 years thousands of scientists, physicians and medical researchers throughout the world have not asked this question -

I, John Stacy Roberts, have asked the question - and answered it -

'Is there any substance which a cancer patient could swallow which would protect or 'buffer' him or her against the toxicity of an oral 'mega-dosage' of Thiazolidine-4-carboxylic acid?

YES - vitamin C also known as ascorbic acid.'

If I speak the truth, cancer can be cured if the patient swallows 'mega-doses' of Thiazolidine-4-carboxylic acid and vitamin C and 'above average' amounts of magnesium, zinc and manganese."

Return to present letter - And what if I speak the truth about the other illnesses which I mention in 'Two falling iron balls' ? -

1. Chronic Myelogenous Leukemia (CML)

2. HIV/AIDS

3. Alcohol Abuse

4. Lou Gehrig's Disease

5. Macular Degeneration.

Readers may not like me and be angry with me, but, henceforth, the opinions of all readers, especially the citizens of the United States should not be directed to me but to their Congressman urging the formation of an investigative committee to question Federal Health Officials about the issues I have raised in these letters to cancercure@egroups.com.

Two years ago if I had had the power I would have ordered a clinical trial to test the effectiveness of Thioproline.

Some readers of cancercure@egroups.com have mistakenly assumed that I have gone about wildly proclaiming the use of 'Equal' and L-cysteine.

This is not the case. The use of 'Equal' and L-cysteine is a 'last gasp' measure. In a December 13, 1997 letter to my Congressman, Peter J. Visclosky, I stated:

" The Spanish clinical trial did not utilize L-cysteine and NutraSweet (part of it changes into formaldehyde); it utilized thiazolidine-4-carboxylic acid; this acid is composed of L-cysteine and formaldehyde; this acid is known by other names such as 'Thioprolin' and 'Tac'.

If American medical authorities think that the clinical trial which I am about to propose is feasible, and if they think that Thioproline would be a more effective chemical to utilize then the combination of L-cysteine and NutraSweet, then, all well and good."

When I wrote this back in 1997 I did not know that NutraSweet and 'Equal' were one and the same.

In all of my letters advocating a clinical trial I always cite the usage of Thioproline - never the combination of 'Equal' and L-cysteine.

I did not know that Thioproline was available in this country until after I had 'published' www.jsr1936.com on The Internet in July, 1999. A reader called me and told me that a Milwaukee, Wisconsin company stocked it (see 'Two falling iron balls').

Previous to this I knew that Thioproline was supposedly available in foreign countries; [1991 Drugs Available Abroad](#) lists eight sources of which Mexico is one; the trade name for it in Mexico was 'Genepar'.

However, when I went to Mexico in April and May of 1999, I could not find any pharmacy which stocked it, and nobody knew anything about it.

Mr. Jerry Rollins telephoned me in August, 1999, and I gave him the details about the foreign suppliers. He also opted to follow the procedure wherein he could generate Thioproline in his own body by simply swallowing 'Equal' and L-cysteine.

Jerry's reaction to Thioproline is described in 'Two falling iron balls'.

Jerry was never able to obtain Thioproline from the foreign sources I provided to him; however, he was finally able to obtain it from a company which I never heard of; as he stated in an August 31, 1999 e-mail to me:

"Finally heard back from Sochinaz in Switzerland (after trying all of them) and they sell only a minimum of 1 kg for \$250 and don't say if it's powder or pills (which I asked). But they do pay for shipping....."

The American company refused to sell Thioproline to Jerry.

Refer to 'Two falling iron balls' to see this company's policy.

If cancer patients cannot obtain or cannot afford Thioproline from any source on the face of the earth, I feel I would be derelict in my duty as a compassionate human being in withholding from them the information that they could generate it in their body by simply swallowing 'Equal' and L-cysteine.

Don't forget - I have described how 'pure' Thioproline (Thiazolidine-4-carboxylic acid) can be made - page 7 of www.jsr1936.com.

My fellow citizens, if there is not 'out there' a study which proves me to be an absolute and consummate fool, I must conclude that the people of the world are suffering a grievous wrong and a terrible injustice because of the lack of will of the medical community to explore fully the anti-cancer potentiality of Thioproline.

If I speak the truth, Thioproline will prove to be the 'Miracle medicine to cure Cancer'.

If the medical community of the world cannot provide me with any better evidence than what I have seen thus far, I must conclude this letter by reaffirming these words for the third time -

"John S. Roberts - I am not at all happy with the evidence which has been assembled against Thioproline. I would be generous if I called it 'scanty'.

I would like for an investigative committee of Congress to ask Dr. Varmus and other National Institutes of Health officials if my No. 1 letter pretty much includes the totality of the negativity which has surfaced against Thioproline.

If this be the case, I am shocked, dumbfounded and dismayed that the paucity of research which I cite in Letter No. 1 constituted the basis for abnegating interest in a compound which showed such glowing promise.

Unless there are facts 'out there' of which I am not aware, I am forced to conclude with a sense of amazement that the medical community of the world has had at its disposal for the past 20 years a possible cure for cancer but has not done anything to promote its development."

People of the World, farewell for now.

Citizens of the United States of America, please contact your Congressman and demand an investigative committee be formed to obtain from Federal Health Officials in the Washington, D.C. area the answers to the questions I have raised in these letters to the e-mail resource 'cancercure@egroups.com'.

Yours truly,

11/29/99

John S. Roberts, P.O. Box H, Hobart, Indiana 46342 (209) 763-1933

Post Script -

1. On November 26, 1999, I posted the following letter to cancercure@egroups.com; the subject title is 'Vitamin C and the Miracle Medicine' -

"My fellow citizens,

If I speak the truth, vitamin C will enable cancer patients to take full advantage of the 'Miracle Medicine' - Thiazolidine-4-carboxylic acid (Thioprolin).

This acid is presently available in the states of Wisconsin and Massachusetts.

Attention Judy Singer, Susan Epstein and Arnold Gore -

On October 23, 1999, Antonio Brugarolas, M.D., wrote to Judy:

'Thank you for your letter and interest in Thioprolin. The investigations of this product were discontinued in 1983 after a European Study indicated insufficient activity for further research.'

These are the 1983 entries for 'Thioprolin' in MedLine (www.ncbi.nlm.nih.gov/pubmed) -

1. Presence in human urine of a new N-nitroso compound N-nitrosothiazolidine-4-carboxylic acid.
2. Lack of reverse transformation after treatment of A 549 human alveolar carcinoma cells with thioprolin.
3. Presence of N-Nitroso-L-thioprolin and N-nitroso-L-methylthioprolins in human urine as major N-nitroso compounds.
4. Thioprolin and the reversal of cancer.
5. Reversal of cancer.
6. Metabolism of TRH analog L-pyro-2-aminoadipyl-L-histidyl-[3H]-L-thiazolidine-4-carboxamide (MK-771) in gut and brain tissue of rats: the implications for its bioavailability.
7. New research on the cellular effects of thioprolin.
8. Distribution of electric charges in 2 substances inducing tumor cell regression.
9. Antitumor studies of 2-amino-2-thiazoline and other tumor-modifying agents.

Is one of the aforementioned the 'European Study' to which Dr. Brugarolas referred?

If none are, was the study unpublished?

Yours truly, John S. Roberts, P.O. Box H, Hobart, Indiana 46342 (209) 763-1933

Post Script -

Please note that a 'Cc:' of this letter was e-mailed to Harold Varmus, M.D., Director, National Institutes of Health (NIH), Bethesda, Maryland (301) 496-2433"

3. Critics of John Stacy Roberts -

I will accept and respond to any and all criticism.

11/29/99

However, the criticism has got to be posted to cancercure@egroups.com.

I will not respond to criticism addressed to jsr1936@jsr1936.com.

I look upon cancercure@egroups.com as a group sharing experience by which we can all further the cause of truth.

Socrates said it best:

"The only good is knowledge and the only evil is ignorance."

Dear Mr. Witt,

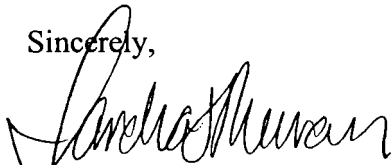

Thank you for your letter of May 24th, 2000, informing us of your *World Tour for the Fight Against HIV/AIDS*.

The Clinton Administration has fully recognized the need for the corporate sector to be included in the multi-sectoral response to HIV/AIDS both here at home and around the world, and I admire your dedication and enthusiasm in this shared struggle.

Unfortunately, the Office of National AIDS Policy is unable to allocate funding for specific projects or programs. I do, however, commend your efforts to heighten awareness of HIV/AIDS and hope that Rapley, Witt & Co., LLC will continue to be a force for change across the globe.

Thank you again for you letter, and best wishes for all your future endeavors.

Sincerely,

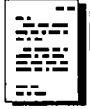

Sandra L. Thurman
Director
Office of National AIDS Policy

VIA FACSIMILE

Dear Ms. Thurman:

Greetings from Sunny California! I would like to commend you on your success & accomplishments as the director of the Office of National AIDS Policy. I am writing to make you aware of a pertinent event directly related to ONAP's campaign and to request your assistance in any possible capacity.

My name is Ray Witt. I am the CEO and partner of *Rapley, Witt & Company, LLC*. We are a minority owned privately held investment banking boutique firm in Southern California. For the past year, our efforts have been focused on an international project centered around the Fight Against HIV/AIDS. Currently, we are organizing a *World Tour for the Fight Against HIV/AIDS*. The tour is scheduled to begin in South Africa and travel to any and/or all the countries willing to participate. The tour's guest speaker is to be Mr. Earvin "Magic" Johnson. The South African event will consist of a 3 day tour: Day #1- a press conference with identified South African dignitaries (Dept. of Health, etc) along with a meet and greet in specified townships, Day #2- A dinner/Gala fundraising event with corporate South Africa. All funds raised will be donated to the South African Department of Health for the Fight Against HIV/AIDS, and Day #3- A youth gathering/public speaking forum to be held at Vista University in Soweto. The tour goals are to create global support for the Fight Against HIV/AIDS, country empowerment through unifying corporate South Africa with the general civilian population, and to promote prevention through education. Presently, the tour is completely organized and set for an October execution date (TBA). We have solidified support from the South African Department of Health as the "Official Hosts" and allied support from other South African entities. Our efforts now are to secure the participation and support of South African President TM Mbeki. In addition, we have begun our efforts to secure corporate funding/sponsorship for this event.

As CEO and partner of *Rapley, Witt & Company*, I would like to personally request your support and assistance in any capacity with our project. If possible, I would welcome and be honored at the opportunity to discuss with you and your staff this monumental event. We believe this event will command World press and its affects will be historical. However, it is essential for us to secure support from organizations like ONAP.

TOGETHER, WE CAN CHANGE THE WORLD!**RAPLEY, WITT &
COMPANY, LLC.**

THE WHITE HOUSE

WASHINGTON

June 9, 2000

George Ramsey, DPLG, PhD Eq.
P.O. Box 37
Nashoba, OK 74558

Dear Mr. Ramsey,

Thank you for your letter of May 2, 2000, in which you expressed concern over the symptomatic approach to halting the AIDS epidemic as opposed to an approach which would emphasize a healthy lifestyle and prevent even the possibility of contracting HIV.

The issues that you present are indeed significant. Please know that we are working hard to ensure that the Clinton Administration responds to this epidemic in a way that moves beyond simply the discovery and administration of chemicals. I very much appreciate your concern and your dedication to fighting AIDS.

Thank you again for your letter, and I wish you all the best in your endeavors.

Sincerely,

Sandra Thurman
Director
Office of National AIDS Policy
