RECEIVED

JAN 13 1994

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Sherril Hackworth, RN, BSN, MN

There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Katie Elrod, RNC-BSN

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Juan L. Mada RNC, RN

RECEIVED

JAN - 6 1994

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Golda Wexler

 750 17th N.W., Suite 1060
 Washington, D.C. 20503

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely, *Veiki B. Turner, RN, CCRN*
