Dear Ms. Gebbie,

APR 26 1994

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Dear Ms. Gebbie,

APR 26 1994

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Sharon H. RN

Kristine M. Gebbie, R.N., M.N.
National AIDS Policy Coordinator
750 17th N.W., Suite 1060
Washington, D.C. 20503

Dear Ms. Gebbie,

FEB 14 1994

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Sharon McHale-Cowher RN CCRN

FEB - 8 1994

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.

We urge you to put the full force of your office into insuring that: (1) HIV becomes a reportable disease, in keeping with sound preventive and treatment policies; (2) definitive studies about the potential of HIV to be spread by aerosol are completed and publicized; (3) operating rooms be equipped with special air filters and O.R. nurses be provided with special face shields and other impenetrable protection; (4) premarital, prenatal, and neonatal testing be mandatory; (5) routine testing of all patients and healthcare workers be mandatory.

I am concerned that the rights of nurses are being abrogated in the name of "political correctness" and call upon you to respect the health and lives of America's frontline healthcare workers, the 2.4 million registered nurses in the United States.

Sincerely,

Angie Carson

Dear Ms. Gebbie,

Along with other registered nurses, I am growing increasingly alarmed at the degree to which nurses are not being adequately protected — particularly in the clinical setting — from people who carry the HIV virus or have AIDS. There is now persuasive evidence that "universal precautions" are not adequate.
