INTRODUCTION

OBJECTIVES AND USER ASSUMPTIONS

Volume V, the Master Index to the NCPP Computerized Data Items, compiles in one volume all NINCDS Collaborative Perinatal Project data items available in computerized form. The data items reside on three major types of computer files: a master file, a variable file and work files. The objectives of the master index are to list all computerized data items in a single location and to assign a unique identification to each computerized data item.

The user of the master index is assumed to be a computer specialist interested in gaining an overview of all computerized data items and the general way they appear in the three major types of files. This master index is not intended to be used to locate specific data items. It is intended to facilitate the formulation of a data request as discussed in Chapter 5 of Volume I.

STRUCTURE OF VOLUME V

The master index is structured to represent the computerized data items from the NCPP and their organization on the master file, variable file and work files. This is the only place where the organization of the data items on the master file is explicitly given. The master index listing gives three primary types of information on a data item: a unique data item identification number; the data item name, including categorization by person, time of measurement or observation and general subject area; and location on the appropriate computer file.

Data items on the master file are listed first. They begin at data item ID 0001..... and end at 4953.ADM-44. Data items on the variable file begin at 4954....VAR and end at 6180....VAR. Work file data items start at 6181....W-1 and end at 6783...W-18.

The master index gives the location of the data item on the appropriate computer file. For the master file, the location is specified by giving a 4-digit card number and the specific columns on that card containing the data item information. The order of the data items in the master index corresponds to the order the data items, i.e. cards, appear in the master file. All cards

pertaining to an NINDB case appear together in this order on the master file. Data item locations on the variable file and work files are specified by giving the data item's starting (FROM) and ending (TO) location on a record. This information is sufficient to allow a subset of the data items to be extracted from any of the three types of computer files.

EXAMPLE USE OF VOLUME V

The master index is not intended to be used to find out what data items are computerized from the NCPP. Other volumes of the User's Guide are better suited for that purpose. For many (or most) researchers, the master index may rarely be consulted for information. Initially a researcher may benefit from a casual study of the listing to gain familiarity with data item identification and name protocol.

Computer specialists will find Volume V most helpful. Through study of the master index, they will be able to discover how data items are organized on each of the files. Volume V is the only volume of the guide where the sequential numerical identification corresponds to the order in which the data items appear on the computer files.

MASTER FILE CARD NUMBER AND NINDB CASE NUMBER RATIONALE

Computer cards for each NCPP study form are numbered to reflect their origin and possible revisions. Card numbers are assigned to identify the type of data (subject), the presence of multiple cards in a series, NCPP study form and form revisions. The first five digits of each card on the master file are the card number. The study forms and card numbers are given in Figure 1.

The first fourteen columns of each master file computer card contain the master file card number and the NINDB case number. Table 1 identifies the function of each of these columns.

Column 1 identifies multiple cards in a series. It contains a zero for cards unique to a particular form (that is, no other cards are present), for example OB-3, or for cards where repetitive data are contained. Cards for OB-2 are an example of this second type; no new categories of information are included on successive cards, but previous births in excess of four must be

FIGURE 1. Cards on the Master File

TABLE 1. Derivation of Master File Card Number and NINDB Case Number.

<u>Contents</u>	<u>Columns</u>
Master File Card Number	
card identifier	1
general subject matter	2
form number	3-4
revision code	5
NINDB Case Number	
collaborating institution	6-7
type of patient selection	8
gravida identification number	9-12
order of the pregnancy	13
identifies child or gravida	14

recorded on an add-on card. For card series where data entered are unique to a card and more than one card is required to complete the series, a "1" is used to designate the first card, for example OB-5. OB-57, PATH-2 and PED-14 are exceptions to these rules.

The second digit on the card reveals the general subject matter covered by data on the card. All cards containing information pertaining to obstetrics, for example, are designated by a "3" in column 2; family histories are designated by a "5"; pathology with a "2"; pediatrics, with a "4"; and psychological testing with a "1".

Columns three and four reveal the form number. In the case of forms where old and new forms having different numbers are included together, the number of the latest form appears on the master file. This rule does not apply to data abstracted from several forms by NINCDS staff (ADM forms).

Column 5 of the card contains a revision code indicating which form or combination of forms was used in arriving at data on a particular card. A typical card will have one to three revision codes, with a zero indicating the first version of a form and "1", "2", and "3" indicating later revisions. As a rule, revision codes used on cards differ from card to card; investigators should check the definition of codes provided in Volume II to determine the meaning of revision codes used.

Each woman and child studied in the project received a unique case number (NINDB case number) composed of nine digits, recorded in columns 6 through 14 of all master file cards. The case number identified the institution, the mother and the child. The first two digits represented the collaborating institution (see Table 2). The third digit indicated the type of patient selection. A "1" was used for patients selected for the central core study; a "6" indicated that a patient had been transferred from one institution to another, and a "7" indicated that the patient was part of a special study undertaken by the collaborating institution. The fourth through seventh digits were used to identify the gravida, while the eighth digit identified the order of the pregnancy of a given gravida in the project. The ninth digit was used to identify the gravida or child of the pregnancy; "9" indicated the gravida, "0" indicated the child of a single birth, "1" indicated the first child of a multiple birth, "2" indicated the second child of a multiple birth, etc.

DATA ITEM IDENTIFICATION AND NAMING

The NCPP data base contains over 6700 different data items and blank filler locations on computer files. We have assigned each of these a unique identification and a terse, stylized name. Because names were chosen to facilitate use of this guide, they do not duplicate names used by NINDB during the active phase of the project. Users should consult appropriate documentation before using data items from the master, variable or work files (Volumes II, III and IV).

The data item identifiers consist of 11 characters. At the far left are four unique numbers that were assigned sequentially. The next character is always a period and is followed by up to six characters. For data items on the master file, these characters describe the data collection form from which a data item was derived; for data items on the variable (VAR) or work (WXX) files, these characters indicate the appropriate file. If the right side is less than six characters, periods are inserted as shown in these examples:

850..OB-34	an item from OB-34; on the master file
3650.PATH-3	an item from PATH-3; on the master file
5223....VAR	an item on the variable file
6340...W-10	an item on work file 10, Rupture of Membranes

We assigned the numbers sequentially as they appear in Volume V. For the master file, we followed the order in which the cards would be found within an NINDB case. All card columns are accounted for by one of our data item identifications. For the variable and work files, the numbers were assigned in the order that data items appear within a case.

We categorized each data item according to the person to whom the data refer, by the time of measurement and/or the time to which the item applies and by general type or subject area (Table 3). Then we assigned names to the data items using the following guidelines:

- The name and the three associated categories had to stand alone - they must describe the data item out of context.
- The first word in the data item name had to be an important or key word when all names were listed alphabetically as in Volumes VI and VII. Thus "cry, abnormal" was used rather than "abnormal cry" because

a researcher is more likely to look for this item under "C" than under "A" in an alphabetic list.

- Secondary key words were preceded with a semicolon to facilitate preparation of the permuted index. For example, "abruptio; placenta" will be found under both the "A" and "P" portion of Volume VI.
- Qualifying words are delimited by commas and will not appear as keywords in Volume VI. Thus "abruptio; placenta, degree" will not be found in the "D" section.
- If medical terminology or usage has changed since the study was conducted, modern terms may be included and will be enclosed in brackets. Thus "mongolism; [Down's syndrome]" will appear under both the "M" and "D" portions of Volume VI.
- If measurement units are associated with a data item name, they are enclosed in parentheses and placed at the end of the name as in "Birthdate (yr)."
- The categories (person, time and subject) are appended to the right of the data item name.

Definitions for each category used in naming data items are given in Table 4 at the end of this introduction. Additional information is found in Chapter 4 of Volume I.

Data item names thus assigned are terse and highly stylized; as we have already indicated, they are not the names used by NINDB during the active phase of the project. Our aim was to develop standardized names that would stand alone. These names are intended to facilitate a user's search for data items potentially useful in a research project. Before an item is used, a researcher should consult its complete description. For a data item from the master files, e.g., 850..OB-34, the data item should be traced to the appropriate study form, e.g., OB-34, located in Volume II. A variable file data item, e.g., 5223....VAR, is traced to Volume III, where it is defined and its original source given. A data item from a work file is traced to Volume IV for its description.

Some data items contained in the indexes may include the notation "DO NOT USE." These items are either inaccurate or an alternative data item is available that gives better information. Users will find more appropriate data items by consulting one of the indexes to the data items (Volumes, V, VI and VII).

TABLE 4. Definition of Person, Time
and Subject Categories

<u>PERSON</u>	<u>DEFINITION</u>
Mother	Study registrant bearing the "study pregnancy"; biologic mother of the "study child"; gravida.
Father	Biologic father of the study child or study pregnancy; in the case of socioeconomic data, this category may indicate either the "father of baby" (not necessarily husband of the mother) or the "husband" (not necessarily related biologically to the study child).
Placenta	The organ of metabolic and gaseous interchange between the fetus and mother; also included in this category are gross and microscopic pathologic data from examination of the umbilical cord.
Fetus	Conceptus; the product of conception including the embryonic stage, i.e., from conception to the moment of birth.
Child	Product of the study pregnancy from the moment of birth onward; study child.
M Surrogate	Person or persons substituting for the mother of a study child, e.g., adoptive parents, foster parents or guardian.
Family	Person or persons biologically related to the mother or father of the study child.
Sibship	Child or children having one or both of the same biologic parents as the study child; siblings; half siblings; full siblings.

**TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)**

TIME	DEFINITION
General	Data with no pertinent time period or data pertaining to more than one time period.
Preconception	Data pertaining to the period prior to conception of the study pregnancy.
Registration	Data collected at the time of study mother's registration in the study.
Prenatal	Data pertaining to the period from conception of the study pregnancy to delivery of the study child.
Admission	Data collected at the time of study mother's admission to the hospital for delivery of the study child.
Intrapartum	Data pertaining to the period from admission for delivery or onset of labor to delivery of the study child.
Delivery	Data pertaining to the time period during which delivery of the study child occurred.
Post Partum	Data (pertaining to the study mother) collected during the period immediately following birth of the study child.
Neonatal	Data pertaining to the study child during the period from birth to one month of age; the majority of these data were collected prior to or at the time a study child was discharged from the hospital.
Four Month	Data collected at the time of the four month examination of the study child.
Eight Month	Data collected at the time of the eight month examination of the study child.
One Year	Data collected at the time of the one year examination of the study child.
Three Year	Data collected at the time of the three year examination of the study child.
Four Year	Data collected at the time of the four year examination of the study child.
Seven Year	Data collected at the time of the seven year examination of the study child.
Eight Year	Data collected at the time of the eight year examination of the study child.

TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)

SUBJECT	DEFINITION
Administrative	Data pertaining to the administrative aspects of the study.
Anesthesia	Data on medications and procedures used to obtain anesthesia.
Clin. Impression	Impression of abnormality or dysfunction gained by an examiner following evaluation of clinical signs and symptoms and including a subjective component.
Clinical Lab	Data obtained from laboratory examination of clinical specimens.
Current Pregnancy	Personal data and medically relevant information pertaining to the study pregnancy for which the mother is enrolled.
Environ. Exposure	Data on exposure to occupational or other environmental entities or hazards.
Events	Data related to a specific event, occurrence or incidence.
Hearing	Data obtained from examination and testing of hearing function.
Hospitalizations	Data on specific hospital admissions or the number of hospitalizations.
Language	Data obtained from examination and testing of language function.
Linkage	Data on the genetic relationships of family members to the study mother, father or child.
Malformations	Data on the conditions in which failure of normal development has resulted in abnormal physical traits existing at the time of birth.
Diag. & Cond.	Data on specific diagnoses or conditions obtained from past medical history or examination during the study.
Med. History	Data obtained from the study participant or medical records relevant to past or current medical diagnoses or conditions.
Medications	Data on drugs or medications used.
Neurological Exam	Data obtained from observation and physical examination of the central nervous system.
Observations	Data obtained from observations not categorized elsewhere.
Pathology	Data obtained from clinical and anatomical pathological examination.
Physical Exam	Data obtained from physical examination of the study participant.
Procedure	Data relating to specific procedures performed on the study participant prior to or during the period of enrollment in the study.
Psych. Exam	Data obtained from the psychological examinations and observations.

TABLE 4. Definition of Person, Time
and Subject Categories. (Cont.)

<u>SUBJECT</u>	<u>DEFINITION</u>
Reproductive Hist.	Data pertaining to the outcome of pregnancies prior to and or during the period of enrollment in the study.
Serology	Data obtained from the laboratory examination of serum by specific immunologic methods.
Socioecon. Info	Data related to the social and economic characteristics and environment of the study participant.
Speech	Data obtained from examination and observation of speech function.
Vision	Data obtained from examination of the eyes.
Work History	Data pertaining to occupation and employment prior to and during the period of enrollment in the study.
X-Ray	Data on diagnostic x rays and diagnostic or therapeutic radiological procedures.
Summary	Data presented as a summary of data collected and recorded elsewhere.
Gyn. History	Medical history specifically related to the female genital tract, reproductive physiology and endocrinology.
Special Studies	Data pertaining to participation in other special organized studies conducted during the period of enrollment in the study.
Fam/Genetic Hist.	Data on the medical histories of family members genetically related to the study child.
SLH Exam	Data obtained from the speech, language and hearing examinations not specifically or exclusively related to one of these areas.

2003..08-57	2357	75	76	Anesthesia, highest level prior to cord clamping: MOTHER, DELIVERY, ANESTHESIA
2004.....	2357	77	78	Blank
2005..08-57	2357	79	79	Plurality: MOTHER, DELIVERY, EVENT (REPEATED FROM ABOVE)
2006..08-57	2357	80	80	Anesthesia reports, numbers: MOTHER, DELIVERY, ADMINISTRATIVE (REPEATED FROM ABOVE)
2007.....	3357	1	5	Card number (sequence, form type, form number, revision number)
2008.....	3357	6	14	NINDB case number
2009..08-57	3357	15	15	Anesthesia; response of patient, unusual, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2010..08-57	3357	16	16	Anesthesia; response of patient; cyanosis, slight, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2011..08-57	3357	17	17	Anesthesia; response of patient; cyanosis, moderate, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2012..08-57	3357	18	18	Anesthesia; response of patient; cyanosis, generalized, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2013..08-57	3357	19	19	Anesthesia; response of patient; hypotension, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2014..08-57	3357	20	20	Anesthesia; response of patient; vomiting, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2015..08-57	3357	21	21	Anesthesia; response of patient; laryngospasm, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2016..08-57	3357	22	22	Anesthesia; response of patient; aspiration, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2017..08-57	3357	23	23	Anesthesia; response of patient; tachycardia, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2018..08-57	3357	24	24	Anesthesia; response of patient; bradycardia, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2019..08-57	3357	25	25	Anesthesia; response of patient; cardiac arrhythmia, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2020..08-57	3357	26	26	Anesthesia; response of patient; apnea, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2021..08-57	3357	27	27	Anesthesia; response of patient; cardiac arrest, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2022..08-57	3357	28	28	Anesthesia; response of patient; other, before cord clamped: MOTHER, DELIVERY, ANESTHESIA
2023..08-57	3357	29	29	Anesthesia; response of patient; unusual, after cord clamped: MOTHER, DELIVERY, ANESTHESIA
2024..08-57	3357	30	30	Anesthesia; response of patient; cyanosis, slight, after cord clamped: MOTHER, DELIVERY, ANESTHESIA
2025..08-57	3357	31	31	Anesthesia; response of patient; cyanosis, moderate, after cord clamped: MOTHER, DELIVERY, ANESTHESIA
2026..08-57	3357	32	32	Anesthesia; response of patient; cyanosis, generalized, after cord clamped: MOTHER, DELIVERY, ANESTHESIA
