

# Viruses

## Parts of a Virus

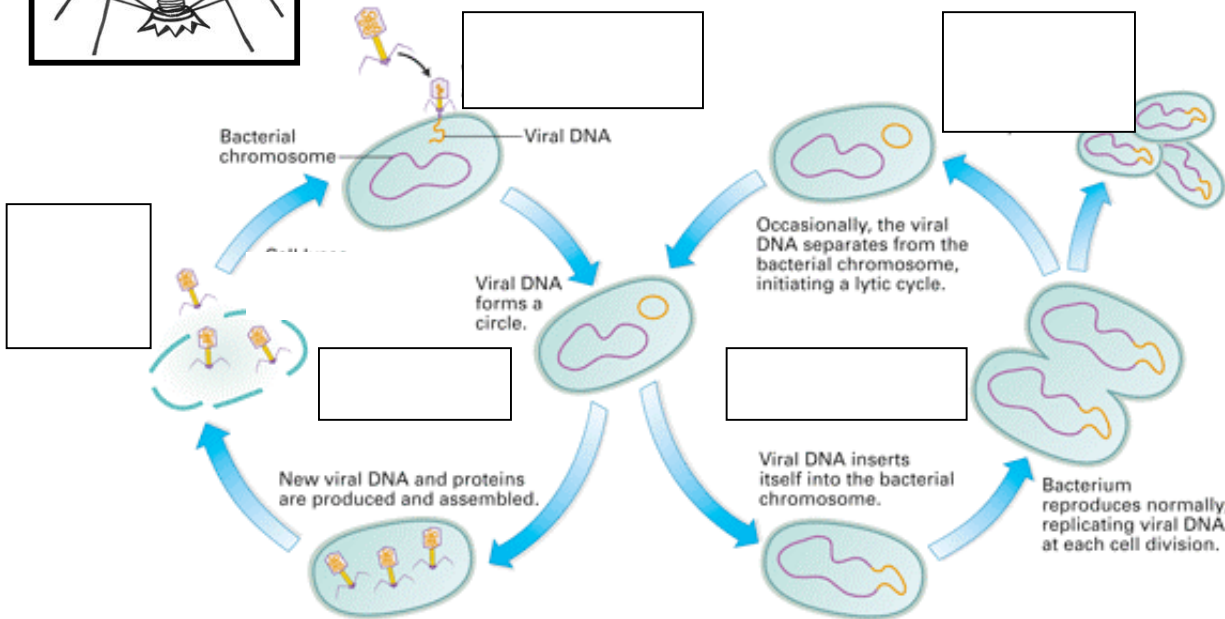

[ ]

[ ]

## Viral Reproduction

This virus is a bacteriophage which means it attacks only \_\_\_\_\_ cells.

## Are Viruses Alive?

- Living things should be able to \_\_\_\_\_.
  - Viruses can reproduce but only when they invade a \_\_\_\_\_ cell.
- Living things should be able to \_\_\_\_\_, and eventually \_\_\_\_\_.
  - Viruses do not grow but are assembled inside the host cell. They cannot \_\_\_\_\_.
- Living things should use \_\_\_\_\_.
  - Viruses do not have \_\_\_\_\_ to metabolize \_\_\_\_\_.
- Living things should be able to \_\_\_\_\_ to their environment.
  - Viruses can go \_\_\_\_\_ when the environment is \_\_\_\_\_.
- Living things should be made of \_\_\_\_\_.
  - Viruses are made of \_\_\_\_\_ and \_\_\_\_\_, and are simpler than cells.
