## W2000/2 Wet Vacuum with Pre-Separator

Ideal for coring, saw cutting and grinding.

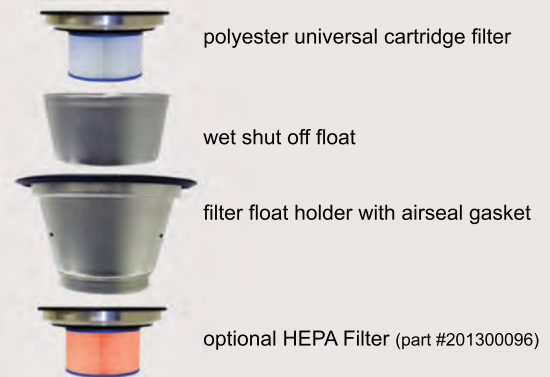

Today dust control is crucial. When grinding, cutting or coring sometimes water must be used. Our wet vacuum systems are the best. The W2000/2 is ideal to reduce the water consumption dramatically! When cutting the used water that is pumped to the saw is extracted and then put through the pre separation tank, moves through the main tank filter bag and screen. It is then pumped back to saw to be re used. This saves costly hauling of water and disposal of slurry and water.

- Stainless steel construction
- Pre separator with metal screen filter
- 70 gallon per minute discharge
- Closed circuit usage with continuous liquid flow
- Float for auto shut-off to protect motor
- Automatic water level control and drainage
- Optional woven bag for fine filtration
- Complete with all hoses and wand

### Patented filter/float system

Maximizes airflow and provides reliable wet shut-off

### W2000/2 Specifications

Motor Effect (W):	1x1300
Weight (lb):	192
Suction Capacity (m3/h):	160
Pump (W):	650
Pump Capacity (gal/min):	68.68
Filter/Float:	No/yes
Size (LxBxH inches):	25x23x40(x2)
Product code:	200600769A
